Thames Water Utilities Limited has provided an extract from their DG5 Flood Register for the study area. Due to data protection requirements the data has not been provided at individual property level, rather the register comprises the number of properties within 4 digit postcode areas that have experienced flooding either internally or externally within the last 10 years.

It should be noted that the records only appear on the DG5 register where they have been reported to TWUL, and as such they may not include all instances of sewer flooding.

Furthermore, given that TWUL target these areas for maintenance and improvements, areas that experienced flooding in the past may no longer be at greatest risk of flooding in the future.

This map is intended to provide a strategic overview of sewer flood risk and should not be used to assess flood risk for individual properties.
