Condensation and mould

Dampness caused by excessive condensation can lead to mould growth on walls and furniture, mildew on clothes and other fabrics and the rotting of wooden window frames. Condensation is caused by:

- Too much moisture being produced in your home
- Not enough ventilation
- Cold surfaces
- The temperature of your home

For more information read our guide to

[Controlling Condensation and Mould](#)

Home Energy Saving

Did you know? Household appliances left on standby or plugged in but not in use will still be sucking power and are therefore known as 'energy vampires.' These can cost an extra £50-80 a year on energy bills. To find out how you can save both energy and money read the [Home Energy Saving](#) guide.

Insulation

Reducing heat loss in your home is one of the most effective ways to reduce your energy consumption, which will save you money on your gas or electricity bills and help the environment by reducing carbon emissions.

Even if you have invested in a new boiler, if your home is poorly insulated then excessive heat loss could mean you pay more than you need to in heating your home.

There are several areas to consider when thinking about insulating your home:
