ISSUE AND IS SUBJECT TO AMENDMENT

LEGEND

 Hertsmere Borough Boundary

BGS Infiltration SuDS Suitability Map (Summary)

 Highly compatible for infiltration SuDS

 Probably compatible for infiltration SuDS

 Opportunities for bespoke infiltration SuDS

 Very significant constraints are indicated

Notes
The 1:50,000 scale digital map data is generalised and the geological interpretation should be used only as a guide to the geology at a local level, not as a site-specific geological plan based on detailed site investigations.

Descriptions of each of the categories are as follows:
- Highly compatible for infiltration SuDS: The subsurface is likely to be suitable for free-draining infiltration SuDS.
- Probably compatible for infiltration SuDS: The subsurface is probably suitable for infiltration SuDS although the design may be influenced by the ground conditions.
- Opportunities for bespoke infiltration SuDS: The subsurface is potentially suitable for infiltration SuDS although the design will be influenced by the ground conditions.
- Very significant constraints are indicated: There is a very significant potential for one or more geohazards associated with infiltration.

This map is intended to provide a strategic overview of infiltration SuDS suitability and should not be used to assess suitability for individual properties.
