Appendix A - Summary of Scoping Report Consultation Comments

Table A.1 - Consultation Responses

Consultee	Comment	Hertsmere Borough Council response
Hertfordshire County Council	Include the following relevant plans, policies and programmes: ➤ EU Sixth Environmental Action Plan ➤ Sustainable Communities – Building for the Future ➤ The Future of Transport White Paper ➤ Draft SEA Scoping Report for Hertfordshire's Municipal Waste Management Strategy	Noted. The requested plans, policies and programmes have been added to Tables 2.1 to 2.5 inclusive, and their content and implications considered in Appendix 1 and Table 2.6.
Hertfordshire County Council	Baseline information very detailed and well thought through.	Support noted.
Hertfordshire County Council	Consider the issues arising from the review of plans, programmes and policies in the identification of key sustainability issues.	Noted. The revisions made to the Scoping Report should provide a clearer link between existing plans, policies and objectives, the identification of key sustainability issues and setting of objectives.
Hertfordshire County Council	It is not very clear which of the Sustainability Objectives are specifically devised in relation to the plan and which are relevant to the requirements of the SEA Directive.	Table 5.1 links the SA objectives and indicators to the relevant topics in the SEA Directive.
Hertfordshire County Council	The number of objectives and indicators seems right.	Support noted.
Hertfordshire County Council	The indicators suggested provide a useful measure for the Sustainability Framework objectives.	Support noted.
Cllr Neil Payne	Include the following relevant plans, policies, actions and programmes: ➤ SMILE – A cultural strategy for Hertsmere ➤ Housing Strategy 2004-2007	Noted. The requested plans, policies and programmes have been added to Tables 2.1 to 2.5 inclusive, and their content and implications considered in Appendix 1 and Table 2.6.

Appendix B - Relevant objectives, targets and indicators

Table B.1 - Relevant objectives, targets & indicators

Relevant objectives, targets & indicators	Implications for SA / SEA
INTERNATIONAL	
Kyoto Protocol to the UN Framework Convention on Climate Change (1992)	
<p>The UNFCCC was adopted on 9th May 1992. It set out to achieve stabilisation of greenhouse gas concentrations in the atmosphere at safe levels. The text of the Kyoto Protocol was adopted at the third session of the Conference of the Parties to the UNFCCC in Kyoto, Japan, on 11 December 1997.</p> <p>Objectives The ultimate objective of the Convention is to “achieve stabilization of atmospheric concentrations of greenhouse gases at levels that would prevent dangerous anthropogenic (human-induced) interference with the climate system...”.</p> <p>The Convention does not define what levels might be “dangerous”, although it does state that ecosystems should be allowed to adapt naturally, food supply should not be threatened, and economic development should be able to proceed in a sustainable manner.</p> <p>Targets The Protocol set out a series of targets for specific greenhouse gases and established a framework of actions and requirements to meet these targets with the aim of achieving in a meaningful timeframe (up to 2012, with 1990 levels used as base) the objective of the UN Framework Convention. The two agreements are thus intrinsically linked with the Protocol essentially acting as a template for action to meet the commitments made in the Framework Convention.</p>	Reducing greenhouse gas emissions will be a key sustainability issue for Hertsme. Will need to consider all potential sources, including travel, pollution, energy and waste.
The World Summit in Sustainable Development, Johannesburg (2002)	
<p>A number of the sustainable development commitments originating from WSSD, are relevant:</p> <ul style="list-style-type: none"> • Integrate energy into country-led poverty reduction processes; • Remove market barriers and create a level playing field for renewable energy and energy efficiency; • Greater resource efficiency (incl. decoupling economic growth from environmental degradation); • Support business innovation and take-up of best practice in technology and management; work on waste and producer responsibility. 	Promoting resources efficiency and business innovation will be the most relevant aspects.
Bern Convention on the Conservation of European Wildlife and Natural Habitats (1979)	
<p>Objectives The aims of the convention are threefold:</p> <ul style="list-style-type: none"> • to conserve wild flora and fauna and natural habitats • to promote co-operation between States • to give particular attention to endangered and vulnerable species, including endangered and vulnerable migratory species <p>There is a general obligation for each Contracting Party to take action individually, with respect to the conservation of wild flora and fauna and all natural habitats in general, through:</p> <p>Promotion of national policies for the conservation of wild flora, wild fauna and natural habitats;</p> <p>Integration of the conservation of wild flora and fauna into national planning, development and environmental policies;</p> <p>Promotion of education and disseminate information on the need to conserve species of wild flora and fauna and their habitats.</p>	Wildlife and habitat conservation will be key sustainability issues and potential objectives.
Bonn Convention on Conservation of Migratory Species (1979)	
<p>Objectives Promote, co-operate and support research relating to migratory species;</p> <p>Endeavour to provide immediate protection for migratory species included in Appendix I; and</p> <p>Endeavour to conclude Agreements covering the conservation and management of migratory species included in Appendix II.</p>	Need to ensure that migratory species are considered as well as local species.

<p>The Convention was agreed based on:</p> <p>Recognition that wild animals in their innumerable forms are an irreplaceable part of the earth's natural system which must be conserved for the good of mankind</p> <p>Awareness that each generation of man holds the resources of the earth for future generations and has an obligation to South America, Asia, Europe and Oceania. ensure that this legacy is conserved and, where utilised, is used wisely</p> <p>Consciousness of the ever-growing value of wild animals from environmental, ecological, genetic, scientific, aesthetic, recreational, cultural, educational, social and economic points of view</p> <p>Concern particularly with those species of wild animals that migrate across or outside national jurisdictional boundaries</p> <p>Recognition that the States are and must be the protectors of the migratory species of wild animals that live within or pass through their national jurisdictional boundaries</p> <p>The conviction that conservation and effective management of migratory species of wild animals require the concerted action of all States within the national jurisdictional boundaries of which such species spend any part of their life cycle</p>	
<p>Conservation of Natural Habitats and Wild Fauna and Flora (Directive 92/43/EC) (The Habitats Directive)</p>	
<p>Objectives</p> <p>to contribute towards ensuring bio-diversity through the conservation of natural habitats and of wild fauna and flora in the European territory of the Member States to which the Treaty applies.</p> <p>maintain or restore, at favourable conservation status, natural habitats and species of wild fauna and flora of Community interest.</p> <p>take account of economic, social and cultural requirements and regional and local characteristics.</p>	<p>Consider including conservation of flora and fauna / habitat as specific SA objective.</p>
<p>EC White Paper: Adapting to climate change: Towards a European framework for action (2009)</p>	
<p>The White Paper proposes an EU framework on adaptation to strengthen the EU's resilience to cope with the impacts of a changing climate. It builds on the wide-ranging consultation launched in 2007 by the Green Paper on Adapting to Climate Change in Europe. The framework will evolve as further evidence becomes available. It will complement actions by Member States and support wider international efforts to adapt to climate change.</p> <p>The White Paper establishes a framework for action focusing on four key pillars:</p> <ul style="list-style-type: none"> - Building a stronger knowledge base - Taking climate change impacts into consideration in key EU policies - Financing – combining different policy measures to the best effect - Supporting wider international efforts on adaptation 	<p>Reducing greenhouse gas emissions will be a key sustainability issue for Hertsmere.</p> <p>Consider Including objectives to address climate change and the need to reduce greenhouse gas emissions.</p>
<p>EU Rural Development Policy 2007-2013</p>	
<p>This policy is all about meeting the challenges faced by rural areas and unlocking their potential, and is focused on three thematic axes:</p> <ul style="list-style-type: none"> - Improving the competitiveness of the agricultural and forestry sector - Improving the environment and the countryside 	<p>SA objectives to ensure these factors are considered.</p>

<p>- Improving the quality of life in rural areas and encouraging diversification of the rural economy.</p> <p>To help ensure a balanced approach to policy, Member States and regions are obliged to spread their rural development funding between all three of these thematic axes.</p> <p>A new feature for this policy is a greater emphasis on coherent strategy for rural development across the EU as a whole. This is being achieved through the use of National Strategy Plans which must be based on EU Strategic Guidelines. This approach should help to:</p> <ul style="list-style-type: none"> - Identify the areas where the use of EU support for rural development adds the most value at EU level - Make the link with the main EU priorities - Ensure consistency with other EU policies, in particular those for economic cohesion and the environment - Assist the implementation of the new market oriented common agricultural policy and the necessary restructuring it will entail in the old and new Member States. 	
<p>EU Thematic Strategy on Air Quality (2005)</p>	
<p>The CAFE Programme forms the basis of the Thematic Strategy for Air Pollution for the EU. The Strategy sets health and environmental objectives and emission reduction targets for the main pollutants.</p> <p>The aim of the CAFE Programme is to establish a long-term, integrated strategy to tackle air pollution and to protect against its effects on human health and the environment. CAFE's objectives are:</p> <ul style="list-style-type: none"> - To develop, collect and validate scientific information on the effects of air pollution. - To support the correct implementation and review the effectiveness of existing legislation and to develop new proposals as and when necessary. - To ensure that the requisite measures are taken at the relevant level, and to develop structural links with the relevant policy areas. <p>To develop an integrated strategy to include appropriate objectives and cost-effective measures. The thematic strategy on air quality identifies that despite significant improvements in air quality across the EU, a number of serious air quality issues still persist. The strategy promotes an approach, which focuses upon the most serious pollutants, and that more is done to integrate environmental concerns into other policies and programmes.</p> <p>The objective of the strategy is:</p> <ul style="list-style-type: none"> - To attain levels of air quality that do not give rise to significant negative impacts on and risks to human health and the environment. <p>The strategy emphasises the need for a shift towards less polluting modes of transport and the better use of natural resources to help reduce harmful emissions.</p>	<p>The SA framework should aim to include objectives that address the protection of air Quality and assess whether appropriate monitoring and control of air emissions is in place.</p>
<p>Groundwater Directive (GWD) (2006/118/EC)</p>	
<p>The Water Framework Directive sets objectives for groundwater quality, including an objective to meet "good chemical status" by 2015, an objective on pollution trends, and an objective to prevent or limit the input of pollutants to groundwater. Clarification of the objectives, however, is left to the daughter directive.</p> <p>The Directive is designed to prevent and combat groundwater pollution. Its provisions include:</p> <ul style="list-style-type: none"> - criteria for assessing the chemical status of groundwater - criteria for identifying significant and sustained upward trends in groundwater pollution levels, and for defining starting points for reversing these trends - preventing and limiting indirect discharges (after percolation through soil or subsoil) of pollutants into groundwater 	<p>Preserving and enhancing groundwater sources, and reducing sources of pollution will be incorporated into objectives and indicators.</p>
<p>Waste Framework Directive (2006/12/EC)</p>	

<p>The 1975 framework Directive on waste was revised by a number of amendments and a new codified version came into force in 2006. This is the only legally valid version of the Waste Framework Directive.</p> <p>The Directive establishes a framework for the management of waste across the European Community. It requires Member States to:</p> <ul style="list-style-type: none"> - Give priority to waste prevention and encourage reuse and recovery of waste - Prohibit the uncontrolled disposal of waste - Establish an integrated network of disposal installations - Prepare waste management plans - Ensure that the cost of disposal is borne by the waste holder - Ensure waste carriers are registered - Ensure that is recovered or disposed of without endangering human health. <p>The Directive's overarching requirements are supplemented by other Directives for other waste streams.</p>	<p>The SA should take into account the fact that waste will be created, which will need to be managed.</p>
<p>EU Air Quality Framework Directive (96/62/EC)</p>	
<p>In zones and agglomerations in which levels of one of more pollutants exceed certain limit values Member States shall prepare and implement a plan or programme for attaining the limit value within the specific time limit. In zones and agglomerations, where the level of more than one pollutant is higher than the limit values, member states must provide an integrated plan covering all the pollutants concerned to improve air quality.</p> <p>Objectives</p> <ul style="list-style-type: none"> • Obtain adequate information on ambient air quality and ensure that it is made available to the public, inter alia by means of alert thresholds, • Maintain ambient air quality where it is good and improve it in other cases. <p>Targets</p> <p>Introduces air quality standards for previously unregulated air pollutants, setting the timetable for the development of daughter directives on a range of pollutants. The list of atmospheric pollutants to be considered includes sulphur dioxide, nitrogen dioxide, particulate matter, lead, ozone, benzene, carbon monoxide, poly-aromatic hydrocarbons, cadmium, arsenic, nickel and mercury.</p>	<p>Air quality is a key sustainability issue. Meeting targets, esp near major roads, will be a challenge. SA objective needed to ensure this is considered throughout LDF preparation.</p>
<p>EU Directive to Promote Electricity from Renewable Energy (2001/77/EC)</p>	
<p>Objectives</p> <p>Promote an increase in the contribution of renewable energy sources to electricity production in the internal market for electricity and to create a basis for a future Community framework thereof.</p> <p>Targets</p> <p>The UK target is for renewables to account for 10% of UK consumption by 2010.</p>	<p>Promoting renewable energy to meet national target will be a key sustainability issue for Hertsmere. Include specific SA objective.</p>
<p>EU Water Framework Directive (00/60/EC)</p>	
<p>Promotes cleaner rivers, lakes, groundwater and coastal beaches. Introduces the single system of water management based on river basins, many of which cross administrative and national boundaries. Identifies five environmental objectives:</p> <p>No deterioration of status for surface and groundwaters and the protection, enhancement and restoration of all water bodies;</p> <p>Achievement of good status by 2015, i.e. good ecological status (or potential) and good chemical status for surface waters and good chemical and good quantitative status for groundwaters;</p> <p>Progressive reduction of pollution of priority substances and phase-out of priority hazardous substances in surface waters and prevention and limitation of input of pollutants in groundwaters;</p> <p>Reversal of any significant, upward trend of pollutants in groundwaters;</p>	<p>Preserving and enhancing surface and groundwater sources, and reducing sources of pollution will be incorporated into objectives and indicators.</p>

Achievement of standards and objectives set for protected areas in Community legislation.	
EU Sustainable Development Strategy	
<p>Objectives:</p> <p>Limit climate change and increase the use of clean energy</p> <p>Address threats to public health (e.g. hazardous chemicals, food safety)</p> <p>Combat poverty and social exclusion</p> <p>Deal with the economic and social implications of an ageing society</p> <p>Manage natural resources more responsibly (including biodiversity and waste generation)</p> <p>Improve the transport system and land use management</p> <p>Targets:</p> <p>Raise the employment rate to 67% for January 2005 and to 70% by 2010; increase the number of women in employment to 57% for January 2005 and to more than 60% by 2010.</p> <p>Halve by 2010 the number of 18 to 24 year olds with only lower secondary education who are not in further education and training.</p> <p>Increase the average EU employment rate among older women and men (55-64) to 50% by 2010.</p> <p>Meet its Kyoto commitment then aim to reduce atmospheric greenhouse gas emissions by an average of 1% per year over 1990 levels up to 2020.</p> <p>By 2020, ensure that chemicals are only produced and used in ways that do not pose significant threats to human health and the environment.</p> <p>Protect and restore habitats and natural systems and halt the loss of biodiversity by 2010.</p> <p>Bring about a shift in transport use from road to rail, water and public passenger transport so that the share of road transport in 2010 is no greater than in 1998 (the most recent year Key European context Key European context for which data are available).</p>	SA objectives should reflect key SDS objectives and take targets into account where relevant to local level.
EU Spatial Development Perspective	
<p>Emphasises the importance of achieving, equally in all regions of the EU, the three fundamental goals of European policy:</p> <p>Economic and social cohesion;</p> <p>Conservation and management of natural resources and the cultural heritage; and</p> <p>More balanced competitiveness of the European territory.</p>	SA to ensure balanced social, economic and environmental appraisal of LDF. Ensure SA objectives reflect these equally.
EU Sixth Environmental Action Programme of the European Community 2002-2012	
<p>The programme identifies four environmental areas for priority actions:</p> <p>Climate Change;</p> <p>Nature and biodiversity;</p> <p>Environment and Health and Quality of Life;</p> <p>Natural Resources and Waste.</p>	SA objectives to ensure these factors are considered.
European Biodiversity Strategy	

<p>Developed around four major themes: Conservation and sustainable use of biological diversity Sharing of benefits arising out of the utilisation of genetic resources Research, identification, monitoring and exchange of information Education, training and awareness</p>	<p>Include biodiversity objective in SA</p>
NATIONAL	
Securing the Future - UK Sustainable Development Strategy	
<p>Key Principles Living Within Environmental Limits: Respect the limits of the planet's environment, resources and biodiversity, improve our environment and ensure that the natural resources needed for life are unimpaired and remain so for future generations. Ensuring a Strong, Healthy and Just Society: Meet the diverse needs of all people in existing and future communities, promote personal wellbeing, social cohesion and inclusion, and create equal opportunity for all. Achieving a Sustainable Economy: Build a strong, stable and sustainable economy which provides prosperity and opportunities for all, and in which environmental and social costs fall on those who impose them, and provide incentives for efficient resource use. Promoting Good Governance: Actively promote effective, participative systems of governance in all levels of society – engaging Using Sound Science Responsibly: Ensure policy is developed and implemented on the basis of strong scientific evidence, whilst taking into account scientific uncertainty (through the precautionary principle) as well as public attitudes and values.</p> <p>Indicators: Introduces 64 'UK Framework Indicators' to give an overview of sustainable development and the priority areas in the UK. Some indicators are still being developed (eg. well-being index).</p>	<p>SA to ensure balanced social, economic and environmental appraisal.</p> <p>Consider relevance of the 64 UK Framework Indicators when developing local SA indicators to ensure compatibility.</p>
Working with the grain of Nature – A biodiversity strategy for England	
<p>The Strategy sets out a series of actions that will be taken by the Government and its partners to make biodiversity a fundamental consideration in: Agriculture: encouraging the management of farming and agricultural land so as to conserve and enhance biodiversity as part of the Government's Sustainable Food and Farming Strategy. Water: aiming for a whole catchment approach to the wise, sustainable use of water and wetlands. Woodland: managing and extending woodland so as to promote enhanced biodiversity and quality of life. Marine and coastal management: so as to achieve the sustainable use and management of our coasts and seas using natural processes and the ecosystem-based approach. Urban areas: where biodiversity needs to become a part of the development of policy on sustainable communities and urban green space and the built environment.</p>	<p>Include biodiversity objective / indicators</p> <p>Includes information on UK sustainable development indicators for biodiversity. Links to leisure, health and access objectives are also compatible. SA report should include some references to the importance of maintaining biodiversity to overcome the gap in the strategy.</p>
UK Climate Change Programme (2000)	
<p>Details how the UK plans to deliver its Kyoto target to cut greenhouse gas emissions by 12.5% and move toward National goal to cut carbon dioxide emissions by 20% below 1990 levels by 2010.</p> <p>Aims Improve business's use of energy, stimulate investment and cut costs; Stimulate new, more efficient sources of power generation; Cut emissions from the transport sector; Promote better energy efficiency in the domestic sector.</p>	<p>Energy use, domestic and business energy efficiency, and sustainable travel should be considered as potential SA objectives</p>

<p>UK Air Quality Strategy 2007</p> <p>This Strategy sets out air quality objectives and policy options to further improve air quality in the UK from today into the long term. As well as direct benefits to public health, these options are intended to provide important benefits to quality of life and help to protect our environment.</p> <p>This updated strategy provides a clear, long-term vision for improving air quality in the UK and offers options for further consideration to reduce the risk to health and the environment from air pollution. It sets out a way forward for work and planning on air quality issues, details objectives to be achieved, and proposes measures to be considered further to help reach the objectives.</p> <p>The strategy:</p> <ul style="list-style-type: none"> - sets out a way forward for work and planning on air quality issues - sets out the air quality standards and objectives to be achieved - introduces a new policy framework for tackling fine particles - identifies potential new national policy measures which modelling indicates could give further health benefits and move closer towards meeting the Strategy's objectives. <p>This review of the previous Air Quality Strategy (2003) proposes potential new policy measures to improve air quality, and examines their costs and benefits, the impact on exceedances of the strategy's air quality objectives, the effect on ecosystems and also the qualitative impacts.</p> <p>This strategy sets out an agenda for the longer term, in particular the need to find out more about how air pollution impacts on people's health and the environment, to help inform options and future policy decisions. It sets out a framework to achieve cleaner air that will bring health and social benefits.</p>	<p>The SA should include objectives that address the protection of air quality and ensure that provisions are in place for air emissions to be appropriately monitored and controlled.</p>
<p>Waste Strategy for England (2007, DEFRA)</p> <p>The aim of this strategy is to encourage a reduction in waste by making products with fewer natural resources. Most products should be re-used or their materials recycled, energy should be recovered where possible and land filling of residual waste, in small amounts, may be necessary. The strategy highlights that significant progress has been made since the 2000 strategy. However, the UK's performance still lags behind other European countries.</p> <p>The Government's key objectives are:</p> <ul style="list-style-type: none"> - To decouple waste growth from economic growth re-use - Meet and exceed the Landfill Directive diversion targets for biodegradable municipal waste in 2010, 2013 and 2020 - Increase diversion from landfill of non-municipal waste and secure better integration of treatment for municipal and non-municipal waste - Secure the investment in infrastructure needed to divert waste from landfill and for the management of hazardous waste - Get the most environmental benefit from investment through increased recycling of resources and recovery of energy from residual waste using a mix of technologies. <p>The strategy address hazardous waste and states that policies will be pursued to reduce hazardous waste arising. The Government is seeking to identify ways to recover material and energy resources from hazardous waste.</p>	<p>The SA should consider objectives to reduce waste production and encourage greater recycling produced.</p>
<p>Environment Agency (2001) Water Resources for the Future – A Strategy for England and Wales</p> <p>Objectives</p> <p>Promote water efficiency – expect household water metering to become widespread over the next 25 years.</p> <p>Pay further attention to leakage control.</p> <p>Promote water sensitive agricultural practices; farmers should consider crop suitability and the possibility of increased winter storage.</p> <p>Active promotion of water efficiency opportunities for commerce and industry.</p>	<p>Efficient use of water a key resource issue in Hertfordshire. Should be reflect in SA objectives.</p>

<p>Deliver the sustainable development of water resources through working together.</p> <p>Targets Enhancement of water supply by up to 1100 Ml/d above present levels by the improvement of existing schemes and the development of some new resources.</p>	
<p>DEFRA (2004) Making space for water: Developing a new Government strategy for flood and coastal erosion risk management in England</p> <p>Aims and objectives</p> <ul style="list-style-type: none"> • Prevent decline in current flood defence standards to improve the situation, consider possible need for extreme flood protection measures • Outlines the importance of a holistic approach, not just putting up defences but finding cost effective means of prevention • Shows the importance of sustainable development (to include elements to do with the environment, and flood management solutions while taking the local communities views into consideration) 	<p>Flood risk will be an important topic within the SA process. The objectives contained within this document could be used as indicators.</p>
<p>DETR (2000) The Air Quality Strategy for England, Scotland, Wales, and Northern Ireland. Working together for clean air (2000)</p> <p>Objectives The Strategy sets objectives for eight main air pollutants to protect health. Performance against these objectives will be monitored where people are regularly present and might be exposed to air pollution. There are also two new objectives to protect vegetation and ecosystems which will be monitored away from urban and industrial areas and motorways. Local authorities in England, Scotland and Wales are required to review and assess air quality in their area against the objectives specified for each pollutant in their respective Air Quality Standards regulations.</p> <p>The objectives in the Strategy have been set with regard to the scientific and medical evidence on the effects of particular pollutants on health.</p> <p>Targets Contains a number of pollutant specific national air quality targets that were updated by DEFRA in August 2002.</p>	<p>Air quality and human health will be important topics within the SA process. The objectives contained within this document could be used as indicators.</p>
<p>DEFRA (2004) The First Soil Action Plan for England: 2004-2006</p> <p>Actions Contains 52 actions on soil related issues including soil management on farms, the planning system, biodiversity, contamination and the role of soils in conserving cultural heritage and landscape. The actions aim to ensure more sustainable soil use and protection.</p> <p>The first milestone will be to examine criteria for designating soils that should be protected from building during the current review of Best and Most Versatile (BMV) land. English Nature will prepare and publish, in 2006, a position statement on the role of soil management and protection within statutory nature conservation sites.</p> <p>Indicators Defra will work with stakeholders to identify the indicators which should be built into a national soil monitoring scheme, in order to develop a scheme which meets both national and European requirements.</p>	<p>Incorporate in SA objectives</p>
<p>UK Waste Strategy</p> <p>The European policies and targets for waste, have been reflected in the Government's own national Waste Strategy and PPS10. The Waste Strategy is based on the following concepts:</p> <p>Best Practicable Environmental Option (BPEO): Intended to establish, for a given set of objectives, the waste management option that provides the most benefits or the least damage to the environment as a whole, at an acceptable cost, in the long term as well as the short term.</p> <p>Proximity Principle: Waste should be processed or disposed of as near as possible to the point of its production. The intention is, in part, to discourage waste authorities from exporting their "waste problem" to other regions. The principle recognises that transporting waste long distances can have significant environmental impact and promotes the establishment of locally based waste management facilities aimed at reducing these environmental impacts with possible financial benefits.</p>	<p>Key principles, especially the waste hierarchy, should be considered in developing Hertsme's SA objectives</p> <p>Encouraging better waste management will help to achieve SA objectives encouraging sustainable waste management. Depending on implementation of policy improvements to objectives based on</p>

<p>Regional Self-Sufficiency: Most waste should be treated or disposed of within the region in which it is produced. In the East of England region, county self-sufficiency is seen as an essential building block of this policy.</p> <p>Waste Hierarchy: The waste hierarchy provides a theoretical framework to be used as a guide for ranking the waste management options being considered as part of the BPEO assessment.</p> <p>Reduction - the most effective environmental solution is to reduce the amount of waste being presented for disposal.</p> <p>Re-Use – the re-use of items for the same or different purpose.</p> <p>Recycling – the recovery of value from waste material through recycling, composting, or recovery of energy.</p> <p>Disposal – as a last resort, if none of the above can offer an appropriate solution, the waste should be disposed of.</p>	<p>renewable energy sources and limiting pollution / contamination can be achieved.</p>
<p>Energy White Paper: Our energy Future – creating a low carbon economy</p> <p>Aims</p> <p>to put ourselves on a path to cut the UK's carbon dioxide emissions - the main contributor to global warming - by some 60% by about 2050, as recommended by the RCEP, with real progress by 2020;</p> <p>to maintain the reliability of energy supplies;</p> <p>to promote competitive markets in the UK and beyond, helping to raise the rate of sustainable economic growth and to improve our productivity; and</p> <p>to ensure that every home is adequately and affordably heated.</p> <p>Contains quantified targets for a number of policies, including carbon emissions (see objectives), electricity from renewable sources (10% by 2010, 20% by 2020) and the industrial use of oil and gas.</p>	<p>Encouraging renewable energy could meet the following areas generally SA objectives:</p> <p>Promote more sustainable development</p> <p>- To encourage a diverse economy</p>
<p>Saving lives: Our Healthier Nation White Paper</p> <p>Objectives</p> <p>Improve the health of the population as a whole by increasing the length of life and the number of years people spend free from illness</p> <p>Improve the health of the worst off in society and narrow the health gap.</p> <p>Targets</p> <p>Reduce the death rate from cancer in people under 75 by at least one fifth;</p> <p>Reduce the death rate from coronary heart disease and stroke and related diseases in people under 75 by at least two fifths;</p> <p>Reduce the death rate from suicide and undetermined injury by at least one fifth;</p> <p>Reduce the death rate from accidents by at least one fifth and to reduce the rate of serious injury from accidents by at least one tenth.</p>	<p>Consider improving health of the population as potential SA objective; take targets into account</p>
<p>The Future of Transport – White Paper</p> <p>Looks at the factors that will shape travel and transport over the next 30 years.</p> <p>Sets out how the Government intends to respond to the increasing demand for travel by maximising the benefits of transport while minimising the negative impact on people and the environment.</p>	<p>Consideration will be given to development being located in sustainable locations as an SA objective.</p>
<p>Climate Change Act 2008</p> <p>The UK Government is committed to addressing both the causes and consequences of climate change and has therefore introduced a Climate Change Act. The Act creates a new approach to managing and responding to climate change in the UK through: setting ambitious targets, taking powers to help achieve them, strengthening the institutional framework, enhancing the UK's ability to adapt to the impact of climate change and establishing clear and regular accountability to the UK, Parliament and devolved legislatures.</p>	<p>Reducing greenhouse gas emissions will be a key sustainability issue for Hertsmere. Consider Including objectives to address climate change and the need to reduce greenhouse gas emissions.</p>
<p>Sustainable Communities – Building for the Future (ODPM 2003)</p> <p>Promotes measures to tackle the housing provisions and mis-match between the South-East and part of the North and Midlands. The plan has allocated to it £22 billion to take affordable housing, housing supply, growth areas, homelessness, social housing and refurbishment schemes.</p> <p>To ensure that all social tenants have a decent home by 2010</p> <p>To improve conditions for vulnerable people in private accommodation.</p>	

<p>To ensure all tenants, social and private, get an excellent service from their landlord. To ensure all communities have a clean, safe and attractive environment in which people can take pride. Most of our cities are thriving. But we need to: bring life back to those areas, most notably in the North and the Midlands, where there is low demand for housing, and where – in the worst cases – homes have been abandoned; recreate sustainable communities; ensure we prevent the repetition of such serious problems in the the longer term; support the National Strategy for Neighbourhood Renewal by tackling the deprivation prevalent in low demand areas. To tackle the housing shortage, especially in London and the wider South East, by: creating conditions in which private house builders will build more homes of the right type in the right places; addressing immediate and urgent needs for more affordable housing, both for key workers and those who would otherwise be homeless; making best use of the existing housing stock. To work towards a better balance in the housing market in the longer term. To do all this in a way that ensures communities are sustainable, enhances the overall environment and protects the countryside. To ensure that in tackling housing shortages we protect the countryside and enhance its quality rather than create urban sprawl. To address the housing needs of rural communities who are often the guardians of the countryside. To accommodate the economic success of London and the wider South East and ensure that the international competitiveness of the region is sustained, for the benefit of the region and the whole country. To alleviate pressures on services and housing caused by economic success where these pressures cannot readily be dealt with within existing towns and cities. Where new and expanded communities are needed, to ensure that these are sustainable, well-designed, high quality and attractive places in which people will positively choose to live and work. To ensure the right framework of laws, structures and decision making processes, and the right skills, to support the agenda in this action programme.</p>	
<p>Planning Policy Guidance Note 2: Green Belts (2005)</p> <p>Provide opportunities for access to the open countryside for the urban population; Provide opportunities for outdoor sport and outdoor recreation near urban areas; Retain attractive landscapes, and enhance townscapes, near to where people live; Improve damaged & derelict land around towns; Secure nature conservation interest; and Retain land in agricultural, forestry & related uses.</p>	<p>Reflect in SA objectives for 'land use' and 'liveable communities'</p>
<p>Planning Policy Guidance Note 8: Telecommunications (2001)</p> <p>Sets policy relating to telecommunications development - including radio masts and towers, antennas of all kinds, radio equipment housing, public call boxes, cabinets, poles and overhead wires. Provides detailed development control guidance.</p>	<p>Not particularly relevant at this stage; consider during detailed DPD preparation.</p>
<p>Planning Policy Guidance Note 13: Transport (2001)</p> <p>Promote more sustainable transport choices for both people and for moving freight; Promote accessibility to jobs, shopping, leisure facilities and services by public transport, walking and cycling, and Reduce the need to travel, especially by car.</p>	<p>Include SA objectives covering sustainable transport/ reducing journey length</p>
<p>Planning Policy Guidance Note 17: Planning for open space, sport and recreation (2002)</p>	

<p>Open spaces, sport and recreation all underpin people's quality of life. Well-designed and implemented planning policies for open space, sport and recreation are therefore fundamental to delivering broader Government objectives:</p> <p>Supporting an urban renaissance Supporting a rural renewal Promotion of social inclusion and community cohesion Health and well being Promoting more sustainable development</p> <p>The location of new areas of open space, sports and recreational facilities, should promote objectives including accessibility, regeneration and social inclusion.</p>	<p>Reflect broader objectives in SA objs covering well-being and liveable communities</p>
<p>Planning Policy Guidance Note 19: Outdoor advertisement control (1992)</p> <p>Provides guidance on the consideration of outdoor advertising proposals to balance the economic importance of advertising with the need for good design. Provides detailed guidance on development controls for advertising.</p>	<p>Not particularly relevant at this stage; consider during detailed DPD preparation.</p>
<p>Planning Policy Guidance Note 24: Planning and noise (1994)</p> <p>The planning system can be used to minimise the adverse impact of noise without placing unreasonable restrictions on development or adding unduly to the costs and administrative burdens of business.</p>	<p>Consider including as part of well-being objectives</p>
<p>Planning Policy Statement 1: Creating sustainable development (2005)</p> <p>Planning should facilitate and promote sustainable patterns of urban and rural development by: Making suitable land available for development in line with economic, social and environmental objectives to improve the quality of life. Contributing to sustainable economic growth. Protecting and where possible enhancing the natural and historic environment and the quality and character of the countryside, and existing successful communities. Ensuring high quality development through good design. Ensuring that development supports existing communities and contributes to the creation of safe, accessible, sustainable communities</p>	<p>Overarches several potential SA themes; most relevant to 'land use' and 'liveable communities'. Consider including objective that reflects</p>
<p>Planning Policy Statement 1 (Supplement): Planning and Climate Change (2007)</p> <p>This PPS supplement sets out how spatial planning (in providing for the new homes, jobs and infrastructure needed by communities) should contribute to reducing emissions and stabilising climate change (mitigation) and take into account the unavoidable consequences (adaptation).</p> <p>The key planning objectives of the PPS seek to:</p> <ul style="list-style-type: none"> - Make a full contribution to delivering the Government's Climate Change Programme and energy policies, and in doing so contribute to global sustainability - In providing for the homes, jobs, services and infrastructure needed by communities, and in renewing and shaping the places where they live and work, secure the highest viable resource and energy efficiency and reduction in emissions - Deliver patterns of urban growth and sustainable rural developments that help secure the fullest possible use of sustainable transport for moving freight, public transport, cycling and walking; and, which overall, reduce the need to travel, especially by car - Secure new development and shape places that minimise vulnerability, and provide resilience, to climate change; and in ways that are consistent with social cohesion and inclusion - Conserve and enhance biodiversity, recognising that the distribution of habitats and species will be affected by climate change - Reflect the development needs and interests of communities and enable them to contribute effectively to tackling climate change - Respond to the concerns of business and encourage competitiveness and technological innovation in mitigating and adapting to climate change 	<p>These objectives should be taken into account and be reflected in the SA objectives.</p>
<p>Planning Policy Statement 3: Housing (2006)</p>	

Planning Policy Statement 3: Housing (PPS3) underpins the delivery of the Government's strategic housing policy objectives and the goal is to ensure that everyone has the opportunity to live in a decent home, which they can afford in a community where they want to live.	Housing is key issue to be addressed through SA objectives
Planning Policy Statement 4: Planning for Sustainable Economic Growth (2009)	
<p>Planning Policy Statement 4 (PPS4) sets out the Government's comprehensive policy framework for planning for sustainable economic development in urban and rural areas. The Government's overarching objective is sustainable economic growth.</p> <p>To help achieve sustainable economic growth, the Government's objectives for planning are to:</p> <ul style="list-style-type: none"> - build prosperous communities by improving the economic performance of cities, towns, regions, sub-regions and local areas, both urban and rural - reduce the gap in economic growth rates between regions, promoting regeneration and tackling deprivation - deliver more sustainable patterns of development, reduce the need to travel, especially by car and respond to climate change⁸ - promote the vitality and viability of town and other centres as important places for communities. To do this, the Government wants: <ul style="list-style-type: none"> • new economic growth and development of main town centre uses to be focused in existing centres, with the aim of offering a wide range of services to communities in an attractive and safe environment and remedying deficiencies in provision in areas with poor access to facilities • competition between retailers and enhanced consumer choice through the provision of innovative and efficient shopping, leisure, tourism and local services in town centres, which allow genuine choice to meet the needs of the entire community (particularly socially excluded groups) • the historic, archaeological and architectural heritage of centres to be conserved and, where appropriate, enhanced to provide a sense of place and a focus for the community and for civic activity • raise the quality of life and the environment in rural areas by promoting thriving, inclusive and locally distinctive rural communities whilst continuing to protect the open countryside for the benefit of all 	Sustainable economic growth should be reflected in the economic SA objectives.
Planning Policy Statement 5: Planning for the Historic Environment (2010)	
<p>This PPS sets out the Government's planning policies on the conservation of the historic environment.</p> <p>The value of the historic environment, and the contribution it makes to our cultural, social and economic life, is set out in the Government's Statement on the Historic Environment for England 2010. Planning has a central role to play in conserving our heritage assets and utilising the historic environment in creating sustainable places. This PPS comprises policies that will enable the Government's vision for the historic environment as set out in the 2010 Statement to be implemented through the planning system, where appropriate.</p> <p>The Government's overarching aim is that the historic environment and its heritage assets should be conserved and enjoyed for the quality of life they bring to this and future generations. To achieve this, the Government's objectives for planning for the historic environment are:</p> <ul style="list-style-type: none"> • to deliver sustainable development by ensuring that policies and decisions concerning the historic environment: <ul style="list-style-type: none"> – recognise that heritage assets are a non-renewable resource – take account of the wider social, cultural, economic and environmental benefits of heritage conservation; and – recognise that intelligently managed change may sometimes be necessary if heritage assets are to be maintained for the long term. • to conserve England's heritage assets in a manner appropriate to their significance by ensuring that: <ul style="list-style-type: none"> – decisions are based on the nature, extent and level of that significance, investigated to a degree proportionate to the importance of the heritage asset – wherever possible, heritage assets are put to an appropriate and viable use that is consistent with their conservation – the positive contribution of such heritage assets to local character and sense of place is recognised and valued; and – consideration of the historic environment is integrated into planning policies, promoting place-shaping. 	SA objective relating to protection of the historic environment should be considered as part of the SA.

<ul style="list-style-type: none"> • to contribute to our knowledge and understanding of our past by ensuring that opportunities are taken to capture evidence from the historic environment and to make this publicly available, particularly where a heritage asset is to be lost. 	
<p>Planning Policy Statement 7: Sustainable development in rural areas</p> <p>Raise the quality of life and the environment in rural areas through the promotion of: thriving, inclusive and sustainable rural communities, ensuring people have decent places to live by improving the quality and sustainability of local environments and neighbourhoods; sustainable economic growth and diversification; good quality, sustainable development that respects and, where possible, enhances local distinctiveness and the intrinsic qualities of the countryside; and continued protection of the open countryside for the benefit of all, with the highest level of protection for our most valued landscapes and environmental resources.</p> <p>Promote more sustainable patterns of development: focusing most development in, or next to, existing towns and villages; preventing urban sprawl; discouraging the development of 'greenfield' land, and, where such land must be used, ensuring it is not used wastefully; promoting a range of uses to maximise the potential benefits of the countryside fringing urban areas; and providing appropriate leisure opportunities to enable urban and rural dwellers to enjoy the wider countryside.</p>	Reflected in land use SA objectives
<p>Planning Policy Statement 9: Biodiversity and Geological Conservation</p> <p>To promote sustainable development – by ensuring that biodiversity is conserved and enhanced as an integral part of economic, social and environmental development, so that policies and decisions about the development and use of land integrate biodiversity with other considerations.</p> <p>To conserve, enhance and restore the diversity of England's wildlife and geology – by sustaining, and where possible improving, the quality and extent of natural habitat and geological and geomorphological sites; the natural physical processes on which they depend; and the populations of naturally occurring species which they support.</p> <p>To contribute to an urban renaissance – by enhancing biodiversity in green spaces and among developments in urban areas so that they are used by wildlife and valued by people, recognising that healthy functional ecosystems can contribute to a better quality of life and a sense of well-being for those who live and work in urban areas.</p> <p>To contribute to rural renewal – by ensuring that developments in rural areas take account of the role and value of biodiversity in supporting economic diversification and contributing to a high quality environment.</p>	Incorporate in SA objectives
<p>Consultation paper on a new Planning Policy Statement: Planning for a Natural and Healthy Environment (March 2010)</p>	
<p>A key objective of this single new PPS is therefore to bring together related policies on the natural environment and on open and green spaces in rural and urban areas to ensure that the planning system delivers healthy sustainable communities which adapt to and are resilient to climate change and gives the appropriate level of protection to the natural environment.</p> <p>Another objective for the streamlining and consolidation of policy in this area is to deliver, for the first time, planning policy on green infrastructure. Key considerations for green infrastructure are the functions or ecosystem services it provides. It should therefore be considered at a broader scale than is necessarily the case for individual areas of open space. Natural England, for example, suggests that it should consider the "landscape context, hinterland and setting, as well as strategic links of sub-regional scale and beyond". It should also take into account the contribution that private assets (e.g. back gardens) as well as public assets (e.g. parks) make to green infrastructure.</p> <p>Therefore, while the existing planning policies and approach on the different components of the natural environment and on open and green spaces remain valid, and taken together go a long way to delivering many of the components of green infrastructure, the new policy recognises that there are subtle differences between planning for open space and planning for green infrastructure.</p> <p>Sustainable development is the core principle underpinning planning. This means that as well as providing for the development needs of all in the community, contributing to economic growth and supporting social justice, planning should ensure that development is delivered in a way which protects</p>	These objectives should be taken into account during the SA process.

<p>and enhances the natural environment and provides places which contribute to the quality of life, health and wellbeing of those living and working there.</p> <p>To achieve this overarching aim, it is the Government's policy that planning should:</p> <ul style="list-style-type: none"> • conserve and enhance the natural environment, including the quality, character and value of the landscape, biodiversity, geodiversity and soil within rural and urban areas by ensuring that: <ul style="list-style-type: none"> – the natural environment is integrated into the strategic vision of communities – policies and decisions are based on an understanding of the nature, extent and value of the natural environment and recognise its importance; and – construction, development and regeneration has minimal impacts on biodiversity and should enhance it wherever possible to contribute to the overall aim of no net loss to biodiversity. • minimise vulnerability of places, people and wildlife to the impacts of climate change and contribute to effective climate change adaptation measures by maintaining, creating and improving networks of green infrastructure within both urban and rural areas • deliver safe and attractive places to live, which respect the character of the area, promote health and wellbeing, and reduce social inequalities by ensuring that people have access to high quality open spaces, green infrastructure and sports, recreational and play spaces and facilities which are safely and easily accessible by walking, cycling or public transport • provide access and appropriate recreational opportunities in rural and coastal areas to enable urban and rural dwellers to enjoy the wider countryside. 	
<p>Planning Policy Statement 10: Planning for sustainable waste management</p>	
<p>Objectives:</p> <p>help deliver sustainable development through driving waste management up the waste hierarchy, addressing waste as a resource and looking to disposal as the last option, but one which must be adequately catered for;</p> <p>provide a framework in which communities take more responsibility for their own waste, and enable sufficient and timely provision of waste management facilities to meet the needs of their communities;</p> <p>help implement the national waste strategy, and supporting targets, are consistent with obligations required under European legislation and support and complement other guidance and legal controls such as those set out in the Waste Management Licensing Regulations 1994;</p> <p>help secure the recovery or disposal of waste without endangering human health and without harming the environment, and enable waste to be disposed of in one of the nearest appropriate installations;</p> <p>reflect the concerns and interests of communities, the needs of waste collection authorities, waste disposal authorities and business, and encourage competitiveness;</p> <p>protect green belts but recognise the particular locational needs of some types of waste management facilities when defining detailed green belt boundaries and, in determining planning applications, that these locational needs, together with the wider environmental and economic benefits of sustainable waste management, are material considerations that should be given significant weight in determining whether proposals should be given planning permission;</p> <p>– ensure the design and layout of new development supports sustainable waste management.</p>	<p>Encouraging better waste management will help to achieve SA objectives encouraging sustainable waste management. Depending on implementation of policy improvements to objectives based on renewable energy sources and limiting pollution / contamination can be achieved</p>
<p>Planning Policy Statement 12: Local Spatial Planning (2008)</p>	
<p>Planning Policy Statement 12 (PPS12) explains what local spatial planning is, and how it benefits communities. It also sets out what the key ingredients of local spatial plans are and the key government policies on how they should be prepared. It should be taken into account by local planning authorities in preparing development plan documents and other local development documents.</p>	<p>This PPS should be taken into account during the LDF preparation.</p>
<p>Planning Policy Statement 22: Renewable energy</p>	
<p>DPDs should contain policies designed to promote and encourage, rather than restrict, the development of renewable energy resources. Local planning authorities should recognise the full range of renewable energy sources, their differing characteristics, locational requirements and the potential for exploiting them subject to appropriate environmental safeguards.</p>	<p>Consider 'encouraging renewable energy' as SA objective</p>
<p>Planning Policy Statement 23: Planning and pollution control</p>	
<p>Reduce air and water pollution Manage waste in a sustainable manner</p>	<p>Reduction of pollution and remediation of contamination should be covered in SA</p>

<p>Use brownfield / contaminated land sites to maintain or enhance biodiversity</p> <p>Advises that: The planning system plays a key role in determining the location of development which may give rise to pollution, either directly or indirectly, and in ensuring that other uses and developments are not, as far as possible, affected by major existing or potential sources of pollution; The presence of contamination in land can present risks to human health and the environment, which adversely affect or restrict the beneficial use of land but development presents an opportunity to deal with these risks successfully;</p>	objectives
Planning Policy Statement 25: Development and Flood Risk (2010)	
<p>Planning Policy Statement 25 (PPS25) sets out Government policy on development and flood risk. Its aims are to ensure that flood risk is taken into account at all stages in the planning process to avoid inappropriate development in areas at risk of flooding, and to direct development away from areas of highest risk. Where new development is, exceptionally, necessary in such areas, policy aims to make it safe, without increasing flood risk elsewhere, and, where possible, reducing flood risk overall.</p>	Consider including flood risk as part of well-being / climate change SA objectives
Local Development Framework Monitoring: A Good Practice Guide (ODPM, 2005)	
<p>Provides guidance on the preparation and monitoring of LDFs, including SA/SEA how LDFs should relate to community strategies and other documents. Identifies key contextual indicator topics and core output indicators for LDFs.</p> <p>Key contextual topics for indicators</p> <p>Demographic structure: population size, household types, ethnic composition, and social groups; Socio-cultural issues: crime rates, unemployment level and deprivation; Economy: economic activity rates, household income, house price level, productivity and employment; Environment: key assets in the natural environment; Housing and built environment: housing stock conditions and quality and assets of the built environment; and Transport and spatial connectivity: transport accessibility, regional hub, spatial inequality/uneven distribution of activities.</p> <p>LDF core output indicators</p> <p>BUSINESS DEVELOPMENT 1a Amount of land developed for employment by type. 1b Amount of land developed for employment, by type, which is in development and/or regeneration areas defined in the local development framework. 1c Percentage of 1a, by type, which is on previously developed land. 1d Employment land supply by type. 1e Losses of employment land in development/regeneration areas and local authority area. 1f Amount of employment land lost to residential development.</p> <p>HOUSING 2a Housing trajectory showing: net additional dwellings over the previous five year period or since the start of the relevant development plan document period, whichever is the longer; net additional dwellings for the current year; projected net additional dwellings up to the end of the relevant development plan document period or over a ten year period from its adoption, whichever is the longer; (iv) the annual net additional dwelling requirement; and (v) annual average number of net additional dwellings needed to meet overall housing requirements, having regard to previous years' performances.</p>	<p>Key guidance for SA/SEA process and how to integrate with LDF preparation.</p> <p>Contextual indicators topics relevant to SA/SEA baseline.</p> <p>Output indicators generally not appropriate for SA/SEA but will need to be incorporated into LDF monitoring.</p>

<p>2b Percentage of new and converted dwellings on previously developed land.</p> <p>2c Percentage of new dwellings completed at: less than 30 dwellings per hectare; between 30 and 50 dwellings per hectare; and Above 50 dwellings per hectare.</p> <p>2d Affordable housing completions.</p> <p>For definitions and further explanation of what is required see Annex B.</p> <p>TRANSPORT</p> <p>3a Percentage of completed non-residential development complying with carparking standards set out in the local development framework.</p> <p>3b Percentage of new residential development within 30 minutes public transport time of a GP, hospital, primary and secondary school, employment and a major health centre.</p> <p>LOCAL SERVICES</p> <p>4a Amount of completed retail, office and leisure development.</p> <p>4b Percentage of completed retail, office and leisure development in town centres.</p> <p>4c Percentage of eligible open spaces managed to green flag award standard.</p> <p>MINERALS (for minerals planning authority only)</p> <p>5a Production of primary land won aggregates.</p> <p>5b Production of secondary/recycled aggregates.</p> <p>WASTE (for waste planning authority only)</p> <p>6a Capacity of new waste management facilities by type.</p> <p>6b Amount of municipal waste arising, and managed by management type, and the percentage each management type represents of the waste managed.</p> <p>FLOOD PROTECTION AND WATER QUALITY</p> <p>7. Number of planning permissions granted contrary to the advice of the Environment Agency on either flood defence grounds or water quality.</p> <p>BIODIVERSITY</p> <p>8. Change in areas and populations of biodiversity importance, including: change in priority habitats and species (by type); and change in areas designated for their intrinsic environmental value including sites of international, national, regional or sub-regional significance.</p> <p>RENEWABLE ENERGY</p> <p>9. Renewable energy capacity installed by type.</p>	
Good Practise Guide on Planning for Tourism	
Outlines the economic significance of tourism and its environmental impact, and therefore its importance in land-use planning. It explains how the needs of tourism should be dealt with in development plans and in development control.	Not particularly relevant at this stage; consider during detailed DPD preparation.
REGIONAL	
East of England plan: Draft revision to the RSS for the East of England	
<p>Objectives</p> <p>1 increase prosperity and employment growth to meet identified employment needs of the region, and achieve a more sustainable balance between workers and jobs</p>	Ensure that Hertsmere's SA objectives are consistent with the objectives for the emerging RSS.

<p>2 improve social inclusion and access to employment and services and leisure and tourist facilities among those who are disadvantaged 3 maintain and enhance cultural diversity while addressing the distinctive needs of different parts of the region 4 increase the regeneration and renewal of disadvantaged areas 5 deliver more integrated patterns of land use, movement, activity and development, including employment and housing 6 sustain and enhance the vitality and viability of town centres 7 make more use of previously developed land and existing buildings, and use land more efficiently, in meeting future development needs 8 meet the region's identified housing needs, and in particular provide sufficient affordable housing 9 protect and enhance the built and historic environment and encourage good quality design and use of sustainable construction methods for all new development 10 protect and enhance the natural environment, including its biodiversity and landscape character 11 minimise the demand for use of resources, particularly water, energy supplies, minerals, aggregates, and other natural resources, whether finite or renewable, by encouraging efficient use, re-use, or use of recycled alternatives, and trying to meet needs with minimum impact 12 minimise the environmental impact of travel, by reducing the need to travel, encouraging the use of more environmentally friendly modes of transport, and widening choice of modes 13 ensure that infrastructure programmes, whether for transport, utilities or social infrastructure, will meet current deficiencies and development requirements; and that the responsible agencies commit the resources needed to implement these programmes and co-ordinate delivery with development 14 minimise the risk of flooding.</p> <p>Indicators Draft RSS proposes 61 indicators.</p>	
<p>East of England plan: Report of the Panel</p> <p>Suggests replacement of the fourteen objectives in the draft RSS with a revised set of five objectives:</p> <p>To reduce the region's impact on and exposure to the effects of climate change by:</p> <ul style="list-style-type: none"> locating development so as to reduce the need to travel; effecting a major shift in travel towards public transport, walking and cycling and away from car use; maximising the energy efficiency of development and promoting renewable energy generation; and minimising the risk of flooding. <p>To increase housing opportunities for people in the region by:</p> <ul style="list-style-type: none"> securing a step change in the delivery of additional housing throughout the region, and especially in the Growth Areas; and recognising a priority for the provision of affordable housing to meet identified needs, particularly in rural areas. <p>To realise the economic potential of the region and its people by:</p> <ul style="list-style-type: none"> facilitating the development needed to support the region's business sectors and clusters and improvement of skills and the widening of opportunities in line with the Regional Economic Strategy; providing for job growth broadly to match increases in housing and to improve the alignment between workplaces and homes; maintaining and strengthening the region's inter-regional connections particularly by improving connections to economic opportunities in London; and ensuring adequate and sustainable provision of transport infrastructure. <p>To improve the quality of life for the region's people by:</p> <ul style="list-style-type: none"> ensuring new development fulfils the principles of sustainable communities, providing a well designed living environment adequately supported by social and green infrastructure; promoting social cohesion by improving access to work, services and other facilities especially for those who are disadvantaged; maintaining cultural diversity while addressing the distinctive needs of each part of the region; regeneration and renewal of disadvantaged areas; and increasing community involvement in the implementation of the strategy at the local level. <p>To improve and conserve the region's environment by:</p> <ul style="list-style-type: none"> ensuring the protection and enhancement of the region's environmental assets, including the built and historic environment, landscape and water; re-using previously developed land and seeking environmental as well as development gains from the use of previously undeveloped land; protecting and where appropriate enhancing biodiversity through the protection of habitats and species, and new habitat creation through development; 	<p>Ensure that Hertsmere's SA objectives are consistent with the objectives for the emerging RSS.</p>

<p>provision of a network of multi-function greenspace accessible to the region's people; and minimising the demand for and use of water and other natural resources and reducing waste and increasing sustainable management of waste.</p>	
<p>East of England Plan: Secretary of State's proposed changes to RSS14</p>	
<p>This report confirms most of the findings in the Panel Report and in particular confirms the 5,000 housing target for Hertsmere. It included a number of substantial green belt reviews elsewhere in Hertfordshire (Hemel Hempstead and Welwyn Hatfield).</p> <p>In addition the level of growth proposed for the seven London arc districts in Hertfordshire has changed several times – from 55,800 new jobs in the draft Plan to 63,000 jobs in the Panel Report to 50,000 jobs in the Secretary of State's proposed changes.</p>	<p>Ensure that Hertsmere's SA objectives are consistent with the objectives for the emerging RSS.</p>
<p>East of England plan: Sustainability Appraisal Report</p>	
<p>Identifies baseline data and indicators and assesses sustainability of draft RSS.</p> <p>Objectives</p> <p>1 achieve sustainable levels of prosperity and economic growth..</p> <p>Generate new jobs for people in the region?</p> <p>Encourage inward investment?</p> <p>Diversify the economy, increase resilience to external shocks?</p> <p>Encourage innovation?</p> <p>Increase manufacturing?</p> <p>Encourage new business start-ups?</p> <p>Support and encourage the growth of rural business?</p> <p>Provide a satisfying job or occupation for everyone who wants</p> <p>Ensure everyone can afford a good standard of living?</p> <p>Reduce vulnerability to climate change, exploit any benefits?</p> <p>2 (a) deliver more sustainable use of land</p> <p>Develop land with least environmental/amenity value / reduce vacant buildings and derelict land? Minimise the development of greenfield land. Minimise the development of land with the most environmental, agricultural and amenity value.</p> <p>Create attractive environment in built up areas? High quality of design: 'good enough to approve rather than bad enough to refuse'.</p> <p>Increase access to leisure facilities (inc. woodlands, parks)? Improve the quality & quantity of publicly accessible greenspace. Improve management of the impacts of access & recreation.</p> <p>Provide opportunities for people to come into contact with and appreciate wildlife & wild places.</p> <p>2 (b) deliver more sustainable location patterns</p> <p>Minimise risk of flooding taking account of climate change? Avoid development form being located in areas at risk from coastal and fluvial flooding or storm surges, taking into account climate change. No additional flood risk from new development.</p> <p>Reduce the need to travel?</p> <p>Reduce car reliance, encourage walking, cycle, bus, train?</p> <p>Reduce need for air travel?</p> <p>Reduce traffic congestion?</p> <p>Reduce road freight movements?</p> <p>3 protect and maintain vulnerable regional assets (natural, built & historic environment).</p> <p>Reduce any sources of pollution?</p> <p>Protect and enhance habitats and wildlife taking account of climate change? Avoid damage to designated sites (national and international) and protected species and achieve favourable condition.</p> <p>Maintain and enhance Biodiversity Action Plan habitats and species in line with regional targets.</p> <p>Restore the full range of characteristic habitats and species to viable levels.</p> <p>Protect and enhance the region's landscapes? Conserve & enhance AONBs & Broads Authority area.</p> <p>Conserve & enhance regional diversity and local distinctiveness. Recognise and protect historic landscape character.</p> <p>Maintain / enhance built and historic character? Ensure settlements can absorb growth without damage to character.</p>	<p>Incorporate objectives and relevant indicators into local SA where appropriate</p>

Protect designated and undesignated (historic) sites and areas of significance.
 Limit water consumption to levels that continue to support wetland habitats (EN). Maintain extent of wetland habitat and rivers.
 Protect & enhance important coastal assets
 Improve the water quality of rivers and groundwater supplies. Maintain 'good' water quality whilst accommodating new development discharge.
 Achieve good air quality, especially in urban areas.
 4 reduce greenhouse gas emissions
 Minimise need for energy?
 Increase energy efficiency?
 Increase renewable share of energy?
 Reduce need for car and road based freight transport?
 5 share access to services and benefits of prosperity fairly
 Reduce disparities in income levels?
 Provide more equal access to opportunities, services and facilities for all?

Indicators

BIODIVERSITY

- 1 Number and extent of designated sites
- 2 SSSI's containing fen vegetation
- 3 Extent of grassland habitat
- 4 Implementation of BAPs
- 5 % of SSSIs in good condition
- 6 Decline in farmland bird species/population 1994-2002
- 7 Decline in woodland bird species/population
- 8 BAP Natural areas
- 9 Average woodland density

WATER QUALITY & RESOURCES

- 10 Chemical river water quality
- 11 Biological river water quality
- 12 No. of nitrate vulnerable zones/Environmentally sensitive areas
- 13 Area designated nitrogen Vulnerable zone
- 14 Agri-env. / organic farming schemes
- 15 Groundwater conditions
- 16 Estuarine water quality
- 17 Bathing water quality
- 18 Abstraction rate of non-tidal water
- 19 Reservoir volumes
- 20 Average soil moisture deficit in mm
- 21 No. of lakes and Reservoirs over 10ha 185 (Anglian), 10.4% of UK
- 22 Water usage per capita
- 23 Water leakage rate

SOIL QUALITY & RESOURCES

- 24 Agricultural land resource (thousand hectares)
- 25 Soil Quality
- 26 Loss of greenfield land
- 27 % land designated as Green Belt
- 28 Houses affected by structural problems
- 29 Amount of contaminated land 300,000 ha (estimate)
- 30 Stock of vacant / brownfield land (2002)

31 Construction industry key performance indicators
 32 % of housing built on brownfield sites
 33 Consumption of aggregates per capita
 34 Waste production by type (m tonnes)
 35 Total household waste (kg/person/year)
 36 Household waste recycled or composted (kg/person/year)
 37 % waste landfilled
 38 % waste recycled
 39 Waste production per capita per year
 AIR QUALITY - OUTPUT FACTORS/EVIDENCE
 40 No. of moderate or poor air quality days 2003
 41 Air Quality Management Areas
 AIR QUALITY - CAUSAL FACTORS
 42 Modal split
 43 Modal split weighted by distance
 44 Commuting mode
 45 Mean journey to work time (minutes)
 46 Mean journey to work time (minutes)
 47 Road traffic growth 1993-2002.

<p>Our Environment, Our Future: The Regional Environmental Strategy for the East of England (July 2003)</p> <p>Strategic aims</p> <p>SA1 Accommodate population and economic growth whilst protecting and enhancing the environment</p> <p>SA2 Reduce the need to travel and achieve a switch to more sustainable modes of transport</p> <p>SA3 Deliver sustainable design</p> <p>SA4 Reduce vulnerability of the region to climate change</p> <p>SA5 Promote energy conservation and a switch to renewable energy sources</p> <p>SA6 Harness environmental benefits arising from climate change</p> <p>SA7 Improve the environmental awareness, skills, and housekeeping of business and the workforce</p> <p>SA8 Promote the environmental economy</p> <p>SA9 Deliver more sustainable agriculture</p> <p>SA10 Maintain and strengthen landscape and townscape character</p> <p>SA11 Enhance biodiversity</p> <p>SA12 Conserve and enhance the historic environment</p> <p>SA13 Reduce the region's global environmental impact</p> <p>SA14 Increase understanding and ownership of environmental issues</p>	<p>Incorporate objectives and relevant indicators into local SA where appropriate</p>
<p>Revised Regional Housing Strategy for the East of England 2005-2010</p> <p>Vision</p> <p>To ensure everyone can live in a decent home at a price they can afford in locations that are sustainable.</p> <p>Aims</p> <p>Use housing investment to support economic development and ensure that the capacity of the housing sector can deliver</p> <p>Provide a sustainable environment and attractive places to live</p> <p>Promote social inclusion within sustainable communities</p>	<p>Incorporate in SA objectives</p>

Ensure that housing serves to improve the region's health and well-being and reduce inequalities	
A Shared Vision: The regional economic strategy for the East of England (2004)	
<p>Vision</p> <p>A leading economy, founded on a world-class knowledge base and the creativity and enterprise of our people, in order to improve the quality of life of all who live and work here.</p> <p>Key strategic goals</p> <p>A skills base that can support a world-class economy</p> <p>Growing competitiveness, productivity and entrepreneurship</p> <p>Global leadership in developing and realising innovation in science</p> <p>High quality places to live, work and visit</p> <p>Social exclusion and broad participation in the regional economy</p> <p>Making the most from the development of international gateways and national and regional transport corridors</p> <p>A leading information society</p> <p>An exemplar for the efficient use of resources.</p>	Incorporate in SA objectives
A Housing Strategy for the London Commuter Belt 2005-2008	
<p>Vision</p> <p>To enable growth in the sub-region and to provide for the needs of homeless people and those who require affordable housing, whilst protecting the environment</p> <p>To create and maintain sustainable communities and achieve social inclusion; and</p> <p>To make the best use of stock whilst improving its condition in both the public and private sectors.</p> <p>Priorities</p> <p>Maximising the delivery of affordable housing</p> <p>Developing the intermediate market</p> <p>Improving stock condition</p> <p>Meeting the needs of vulnerable groups</p> <p>Achieving social inclusion</p>	Incorporate in SA objectives
Sustainable Futures: The Integrated Regional Strategy for the East of England	
<p>Vision</p> <p>To improve the quality of life for everyone who lives or works in the East of England</p> <p>Objectives</p> <p>An exceptional knowledge base and a dynamic economy in the Region;</p> <p>Opportunities for everyone to contribute to – and benefit from – the Region's economic dynamism;</p> <p>Strong, inclusive, healthy and culturally rich communities;</p> <p>A high quality and diverse natural and built environment; And</p> <p>A more resource-efficient region.</p> <p>The strategy also identifies eight "Crucial Regional Issues":</p> <p>Housing supply, growth and sustainability;</p> <p>Transport, travel and infrastructure;</p> <p>Building the knowledge economy;</p> <p>Skills and labour supply;</p> <p>Deprivation and access to services</p> <p>Health and well being;</p> <p>Rural issues; and</p>	The strategy covers a wide range of themes which will be incorporated into SA Objectives and targets as appropriate.

Resource issues	
A Sustainable Development Framework for the East of England	
<p>Vision To plan for an improving quality of life for the people of the East of England which is sustainable for the long-term future and, in particular: Enable its potential for economic growth to be achieved in a balanced way, in the interests of all the people of the region and the UK and beyond. Spread the benefits of growth more equally, so as to reduce poverty, crime, ill health and social exclusion and reduce inequalities. Foster a sense of well-being and self-worth by enabling people to achieve their full potential, and providing for rewarding employment, learning and leisure. Protect and enhance the quality of the region's natural and built environment. Manage the use of resources sustainably and innovatively, in order to minimise the region's global environmental impact.</p> <p>Objectives To achieve sustainable levels of prosperity and economic growth. To deliver more sustainable patterns of location of development, including employment and housing. To protect and maintain our most valuable regional assets such as designated habitats, landscapes of natural beauty, and our historic built heritage, and to improve the wider environment by means of adequate investment and management. To reduce our consumption of fossil fuels. To achieve a more equitable sharing of the benefits of prosperity across all sectors of society and fairer access to services, focusing on deprived areas in the region. To use natural resources, both finite and renewable, as efficiently as possible, and re-use finite resources or recycled alternatives wherever possible. To minimise our production of by-products or wastes, aiming for 'closed systems' where possible. To avoid using the global environment to underwrite our own unsustainable way of life (e.g. dependence on unsustainably produced and/or transported food imports or timber). To revitalise town centres to promote a return to sustainable urban living.</p>	To be incorporated into SA Objectives
Regional Social Strategy: A Strategy to achieve a fair and inclusive society	
<p>Vision To achieve social inclusion throughout the East of England</p> <p>Aims To develop a common definition of social exclusion, analyse its causes and describe how it is experienced. To bring together the evidence for effective intervention at a regional and local level in order to add value. To focus regional action in tackling social exclusion. To provide a framework for supporting regional and local action for tackling social exclusion.</p> <p>Objectives To tackle poverty and reduce income inequalities To promote access to work, tackle low pay and improve conditions of work To improve the life chances of children from disadvantaged families and support vulnerable young people in the transition to adulthood To improve the life chances of adults through learning and skills development To promote active ageing and reduce social exclusion of older people To support the development of sustainable communities To improve access to services, especially for disadvantaged groups To develop social networks, community assets and promote community cohesion</p>	Incorporate into SA Objectives and indicators
Living with climate change in the East of England	
<p>Identifies a number of key messages:</p> <p>By planning ahead we can avoid the worst impacts and take advantage of any opportunities. Investing now to adapt to climate change can lead to cost savings in the future.</p>	Impact upon climate change will be considered in the SA

<p>Key stakeholders in the East of England favour adopting an approach to climate change which allows the region to live with the impacts of climate change in the long term, rather than fight against them in the short term.</p> <p>Climate change will create opportunities as well as threats. Tourism is one of the most obvious beneficiaries, but other sectors may also benefit, e.g. environmental technologies to deal with the impacts of climate change.</p> <p>Though very few business sectors consider climate change adaptation to be important, business activity will be significantly affected by changes in climate. For the Southern Heartland flood risk and water resource issues will be significant.</p> <p>Development will undoubtedly continue in areas more vulnerable to the impacts of climate change, often for good reasons; the guiding principles prepared as part of the study can help to optimise their location and reduce the vulnerability of settlements to climate change.</p>	
<p>Creating Sustainable Communities in the East of England</p> <p>Regional level companion to the Sustainable Communities plan, identifies a number of strategic challenges for the region:</p> <p>Addressing problems of high and rapidly rising house prices and their impact on the recruitment and retention of staff, particularly close to London and around Cambridge but spreading deeper into the region.</p> <p>Improving transport infrastructure – railways, roads, airports and ports to meet the needs of economic growth.</p> <p>Ensuring that the benefits of economic growth are spread across the region, particularly to those urban and rural communities facing problems of deprivation and peripherality.</p> <p>Addressing the development consequences of scarce water resources throughout the region and an increasing sea level for coastal and low lying areas.</p>	<p>To be incorporated into sustainability objectives and key issues</p>
<p>Towns and Cities – Strategy and Action Plan: Urban Renaissance</p> <p>Regional level response to the Urban White Paper and Sustainable Communities plan. Shares the vision and objectives of its higher level counterpart with an additional objective:</p> <p>People and organisations in the public, private and voluntary sectors who have the skills necessary to deliver the urban renaissance.</p> <p>Report also identifies a number of headline targets:</p> <ul style="list-style-type: none"> To focus development on previously developed land To develop housing at higher densities where there is good public transport accessibility To focus development on the main urban areas To stabilise car traffic in major urban areas To focus retail provision in the centre of urban areas 	<p>To be incorporated into SA Objectives</p>
COUNTY	
<p>Hertfordshire Structure Plan 1991-2011</p> <p>Aims for sustainability</p> <ul style="list-style-type: none"> Reduce overall demand for resources Make the most efficient use, including re-use and recycling, of renewable and non-renewable resources (including land) Increase the use of renewable resources where this would not be detrimental to other aims Maintain and enhance biological diversity Mitigate the possible causes and effects of climate change Increase the rate of carbon fixing Reduce pollution and the effects it has on ecosystems and human health Maintain 'critical' national and local environmental assets, which would be impossible or very difficult to replace Maintain and where possible increase stocks of less critical environmental assets (of which no one example is critical but whose overall spread and frequency are important for the environmental character of an area) Improve the overall quality of life, meeting housing, employment, health, education, recreation and other human needs within a safe, healthy, diverse and pleasant environment Increase community awareness and involvement Improve equality of opportunity in economic and social terms 	<p>Incorporate in SA objectives</p>

Apply the precautionary principle where the potential damage to the environment is uncertain and significant.	
Hertfordshire Structure Plan Alterations 2001-2016 Deposit Draft Version, February 2003	
<p>Key issues</p> <p>Making development more sustainable, for example through location, high quality design and construction</p> <p>Meeting an annual average building rate of 3,280 homes</p> <p>Concentrating new house building within existing built up areas, with at least 60 per cent on previously developed land</p> <p>Developing land efficiently</p> <p>Maintaining the vitality and viability of existing towns and villages</p> <p>Encouraging continued economic growth consistent with the number of people seeking work and environmental constraints</p> <p>Encouraging key businesses within the county, for example, the film industry and life science research</p> <p>Taking advantage of the economic and transport opportunities afforded by Luton and Stansted airports whilst safeguarding the quality of life of people who live and work in the county</p> <p>Providing a larger proportion of new housing that is affordable to people on lower incomes, and ensuring that key workers, such as teachers and health staff, can afford to live in the county</p> <p>Reducing road traffic growth, particularly in main towns and at peak periods, and encouraging walking, cycling and greater use of passenger transport in preference to the private car</p> <p>Conserving and enhancing the county's important environmental assets, including its landscape, ecological, built and archaeological heritage and safeguarding the county's area of green belt</p> <p>Encouraging the integration of renewable sources of energy into new development</p> <p>Promoting the re-use and recycling of waste and the conservation of water resources</p> <p>Requires Hertsmere to provide for 250 new dwellings per annum from 2003 to 2011.</p>	Incorporate in SA objectives
Hertfordshire Local Transport Plan 2006/07 to 2010/11	
<p>Vision</p> <p>To provide a safe, efficient and affordable transport system that allows access for all to everyday facilities. Everyone will have the opportunity and information to choose the most appropriate form of transport and time of travel. By maximising the use of the existing capacity of the network we will work towards a transport system that balances economic prosperity with personal health and environmental well being.</p> <p>Key objectives</p> <p>Safety</p> <p>To improve safety for all by giving the highest priority to minimising the number of collisions and injuries occurring as a result of the transport system.</p> <p>Congestion</p> <p>To obtain the best use of the existing network through effective design, maintenance and management.</p> <p>To manage the growth of transport and travel volumes across the county, and thereby secure improvements in the predictability of travel time.</p> <p>To develop an efficient, safe, affordable and enhanced transport system which is attractive, reliable, integrated and makes best use of resources.</p> <p>Accessibility</p> <p>To develop a transport system that provides access to employment, shopping, education, leisure and health facilities for all, including those without a car and those with impaired mobility.</p> <p>To ensure that the transport system contributes towards improving the efficiency of commerce and industry and the provision of sustainable economic development in appropriate locations.</p> <p>Environmental</p> <p>To mitigate the effect of the transport system on the built and natural environment and on personal health.</p> <p>To raise awareness and encourage use of more sustainable modes of transport through effective promotion, publicity, information and education.</p> <p>Other</p> <p>To reduce the need for the movement of people and goods through integrated land use planning, the promotion of sustainable distribution and the use of</p>	The SA will include objectives on the reduction of traffic, improvements to air quality, human health, and the reduction in crime.

telecommunications.	
Hertfordshire's Local Transport Plan 2006/07 – 2010/11 Strategic Environmental Assessment Report	
<p>SEA Objectives</p> <p>Maintenance of high and stable levels of economic growth and employment</p> <p>Improve economic performance and competitiveness consistent with environmental constraints</p> <p>Create a vibrant local economy</p> <p>Maintain high and stable levels of employment</p> <p>Promote lifelong learning and skills development</p> <p>Maintain the vitality and viability of existing centres</p> <p>Social progress which meets the needs of everyone</p> <p>Tackle the causes of poverty and social exclusion</p> <p>Improve physical and mental health of population and reduce health inequalities</p> <p>Ensure everyone has the opportunity for a decent home</p> <p>Reduce crime and create safe environments</p> <p>Maximise the opportunities for leisure and a healthy lifestyle for all</p> <p>Spread economic growth more evenly to benefit deprived areas</p> <p>Improve access to services and community facilities for all</p> <p>Empower all sections of the community to participate in decision making and local action</p> <p>Effective protection of the environment and prudent use of natural resources</p> <p>Adhere to environmental standards and management principles</p> <p>Improve the sustainable use of resources</p> <p>Reduce pollution</p> <p>Ensure the sustainable supply and use of energy</p> <p>Move away from waste disposal to minimisation, reuse, recycling and recovery</p> <p>Ensure the efficient use of water and safeguard water resources</p> <p>Plan for the impacts of climate change</p> <p>Protect and enhance biodiversity</p> <p>Protect and provide green spaces</p> <p>Ensure the efficient use of land and buildings</p> <p>Protect landscape and townscape character</p> <p>Improve the choice of sustainable transport modes, encourage their use, and reduce the need to travel by car</p>	<p>SA objectives generally include improving air quality, promoting better health and reducing the need to travel and accessibility. <p>Hertfordshire Economic Development Strategy 2006-2010 Objectives reflect those in the Regional Economic Strategy: A skills base that can support a world-class economy Growing competitiveness, productivity and entrepreneurship Global leadership in developing and realising innovation in science High quality places to live, work and visit Social exclusion and broad participation in the regional economy Making the most from the development of international gateways and national and regional transport corridors A leading information society An exemplar for the efficient use of resources.</p>	<p>The SA/ SA will include information and objectives based on increasing economic efficiency, accessibility and social inclusion, encouragement of skills and knowledge and creation of sustainable buildings</p>
<p>A community strategy for Hertfordshire 2004/10 To improve the well being of the people of Hertfordshire, today and for future generations Key Themes and Aims Building a prosperous, inclusive society: Develop an economic and social environment that supports the development of businesses Improve standards of living in a sustainable manner Develop an economy that is prosperous, socially inclusive and environmentally sensitive Creating safer communities: Ensure that Hertfordshire continues to be a safe place in which to live, work and travel Break the cycle of offending and break the cycle of people becoming victims Protect vulnerable members of the community from committing crime or becoming victims of crime Reduce the impact that drugs misuse and alcohol misuse has on communities Investing in children and young people: Ensure that children and young people in the county are protected from harm and helped to realize their potential Increase learning, play, and leisure opportunities and promotion of healthy lifestyles for children and young people, thus improving their life chances as the adults of the future Ensure that children and young people have equal opportunities for development and achievement Take forward the Preventative Strategy to ensure that children and young people receive effective help as soon as they need it Further develop joint planning and commissioning arrangements to promote co-operation to improve the wellbeing of all children Maintaining a sustainable environment: Work towards a more sustainable environment Protect and enhance natural assets Provide appropriate transport provision and more affordable and sustainable homes Promoting healthier communities: Tackle the root causes of ill health to secure the well being of future generations Reduce inequalities in health and improve lifestyle risk factors Improve the health of vulnerable people</p>	<p>Relates to many of the objectives including reduction of crime, promoting skills, economic growth, affordable homes, accessibility and social inclusion</p>
<p>The Hertfordshire Environmental Strategy (2001)</p>	
<p>Sustainability principles for Hertfordshire: A better quality of life</p>	<p>Incorporate in SA objectives</p>

The creation of a better quality of life for every body that lives and works within the County lies at the heart of the sustainable development strategy for Hertfordshire. It is the starting point and it is from this objective that the other five take their lead.
We will work toward the ideas of sustainable development by integrating into everything we do an appropriate balance of environmental, social and economic considerations. In all of our decisions, we will take a long-term view of the consequences and the impact on future generations.

Social progress which recognises the needs of everyone
Everyone should share in the benefits of increased prosperity surrounded by a clean and safe environment. We have to improve access to services, tackle social exclusion, and reduce the harm to health caused by poverty, poor housing, unemployment and pollution. Our needs must not be met by treating others, including future generations and people elsewhere in the world, unfairly.
We will try to make sure that everyone has equal access to the services and information necessary to make responsible environmental choices and improve their life chances.
We will work in partnership to reduce crime and the fear of crime in Hertfordshire.
We will respect and value all the different cultures represented in the County.
We will help raise people's awareness of the benefits of healthier lifestyles.
We will co-ordinate our activities with other organisations and work in partnership when it makes sense to do so.
We will encourage people to get involved in their local communities, to understand the needs of all groups in those communities and to recognise the value of group action.
We will work with the community, taking notice of people's opinions, ideas and concerns, and giving them influence over actions that affect them.

Effective protection of the environment
We must act to limit global environmental threats such as climate change; to protect human health and safety from hazards such as poor air quality and toxic chemicals; and to protect things which people need or value, such as wildlife, landscapes and historic buildings.
We will start by complying with the minimum requirements of the law and other environmental regulations, and strive for year on year improvement.
We will try to make sure that any new development adopts the Best Practicable Environmental Option (BPEO) in its construction and continued use.
Before taking decisions involving new science and technology we will examine the available evidence to assess its possible impact on the environment, applying the Precautionary Principle when appropriate.
In everything we do, we will consider the impact on wildlife of Hertfordshire, and try to keep and improve habitats where wildlife can prosper.
We will take immediate action against those who wilfully break the law and cause damage to the environment.

Prudent use of natural resources
This does not mean denying ourselves the use of non-renewable resources such as oil and gas, but we do need to make sure that we use them efficiently and that alternatives are developed to replace them in due course. Renewable resources such as water should be used in ways that do not endanger the resource or cause serious damage or pollution.
We will try to carry out our own activities in a way that minimises our use of non-renewable resources and ensure that we use all resources in an efficient and responsible way.
We will make it as easy as possible for everyone to chose the form of transport appropriate to his or her journey that has least cost for the environment. We will try to make sure our own service are fully accessible without using private cars...

Maintenance of high levels of economic growth and employment so that everyone can share in high living standards and greater job opportunities
The UK is a trading nation in a rapidly changing world. For our country to prosper, our businesses must produce the high quality goods and services that consumers throughout the world want, at prices they are prepared to pay. To achieve this we need a workforce that is equipped with the education and skills for the 21st century. In addition, we need businesses ready to invest in Hertfordshire, and an infrastructure to support them.
We will contribute to a strong, sustainable economy for Hertfordshire, providing a variety of jobs and training opportunities for local people, and wherever possible, investing locally.
We will try to meet as many as possible of Hertfordshire people's leisure needs locally, without overloading the places that provide the opportunities.

Effective communications of ideas and information
Only by acting together can these objectives be realised, therefore communication is essential to the realisation of this strategy. This must be open and

<p>effective between the many public sector bodies to whom responsibility for the implementation of this strategy will fall. It must also be effective in translating the ideas, actions and achievements to the public; they are a crucial element in taking forward the strategy if implementation is to be successful</p> <p>We will encourage those working for us and for us to adopt these Principles and implement them.</p> <p>We will provide clear and open information on the work that we carry out.</p> <p>These areas correspond with the four objectives identified in the UK Sustainable Development Strategy 'A better quality of life'. The remaining two objectives are specific to Hertfordshire and are a result of the consultation process carried out to identify the principles.</p>	
Hertfordshire Waste Strategy 2002-2024	
<p>To facilitate the provision of sufficient waste management facilities in Hertfordshire to accommodate the equivalent of the County's own arisings;</p> <p>To recognise that waste management generates employment and is part of the infrastructure which supports business in general;</p> <p>To locate waste recycling, handling and reduction facilities as close as practicable to the origin of waste;</p> <p>To promote the development of waste management facilities which increase the proportion of waste managed further up the waste hierarchy;</p> <p>To minimise the traffic generating effects of waste management development;</p> <p>To mitigate against the possible effects of greenhouse gases;</p> <p>To reduce the overall demand for resources (including land);</p> <p>To involve the wider community in the waste management debate;</p> <p>To facilitate the increased use of recycled waste materials as aggregate in Hertfordshire;</p> <p>To facilitate a shift away from road transport as the principal means of transporting waste;</p> <p>To minimise the impact of waste management development on the natural and built environment;</p> <p>To maximise the recovery of value (including energy) from waste, where this represents the Best Practicable Environmental Option;</p> <p>To adopt the Best Practicable Environmental Option when considering alternative forms of waste management development.</p>	Encouraging better waste management will help to achieve SA objectives encouraging sustainable waste management
Waste Development Plan Issues and Options Paper September 2004	
<p>As objectives for Hertfordshire Waste Strategy 2002-2024 plus:</p> <p>To reduce and minimise the amount waste produced for disposal, including through industry operations (e.g. packaging)</p> <p>To involve the wider community in the waste management debate</p>	Encouraging better waste management will help to achieve SA objectives encouraging sustainable waste management
Draft SEA Scoping Report for Hertfordshire's Municipal Waste Management Strategy	
Unable to obtain document	
Hertfordshire Minerals Local Plan Second Deposit Draft 2003	
<p>To encourage the efficient use of materials, particularly maximising the use of recycled and secondary aggregates and reducing the use of primary aggregates, thereby reducing reliance on land won sources of material.</p> <p>To identify and safeguard mineral resources to ensure that there are sufficient environmentally acceptable sources to maintain an appropriate level of current and future supply in accordance with Government guidance and to prevent the unnecessary sterilisation of mineral resources.</p> <p>To ensure that the adverse impacts on the environment and people caused by mineral operations and the transport of minerals are kept, as far as possible, to an acceptable minimum.</p> <p>To ensure sensitive working, reclamation and aftercare practices so as to preserve or enhance the overall quality of the environment and promote biodiversity where appropriate.</p>	Encouraging efficient resource use and environmental preservation to be reflected in SA objectives
Enjoy! A cultural strategy for Hertfordshire 2002-2007	
<p>Key messages</p> <p>Making Hertfordshire a more prosperous and attractive place to live, work or visit</p> <p>Offering children, young people and adults the opportunity to reach their full potential through access to learning and information</p> <p>Encouraging children and young people to access and enjoy cultural and leisure activities</p> <p>Enabling all members of the community to have more and easier access to different cultural and leisure pursuits</p> <p>Valuing and supporting the diverse range of cultural and leisure activities enjoyed across the county</p> <p>Working in partnership with national, regional and local agencies to deliver a range of cultural and leisure activities effectively</p>	Incorporate in SA objectives
Hertfordshire Local Area Agreement	

<p>The Local Area Agreement (LAA) is a new way of working in Hertfordshire. It aims to bring together a wide range of partners to deliver better services and improve the quality of life for Hertfordshire's residents. Some of the key features of the LAA include improved collaboration between public, private and voluntary and community sector agencies as well as greater flexibility to devise local solutions to local circumstances.</p> <p>The LAA is divided into four areas or 'themes':</p> <ul style="list-style-type: none"> - Children & Young People (CYP) - partners, including the Voluntary and Community Sector, have come together and agreed on issues (outcomes) they believe to be important to children. - Economic Development and Enterprise (EDE) - the LAA seeks to build on Hertfordshire's locational advantages in a sustainable way by making better use of existing infrastructure and by supporting residents who are not benefiting from the wealth of the county. - Healthy Communities and Older People (HCOP) - the Healthier Communities and Older People Block aims to improve the health and quality of life of Hertfordshire's residents with a focus on older people, the disabled, and those with limited access to health care. - Safer and Stronger Communities (SSC) - seeks to tackle crime and disorder and create safer and stronger communities. It also seeks to ensure cleaner, safer and greener neighbourhoods by creating quality spaces and managing the environment sustainably. 	<p>LAA to be taken into account during the SA process.</p>
<p>Hertfordshire 2021: A Bright Future</p>	
<p>Hertfordshire Forward's draft Sustainable Community Strategy outlines all of the major challenges faced by the county both now and in the future. It sets out a long term vision for what partners want Hertfordshire to 'be' like in 2021 and a series of objectives and short term actions to be delivered in partnership.</p> <p>The community strategy has identified the following as key areas of concern for improvement:</p> <ul style="list-style-type: none"> - Jobs, Prosperity and Skills - Safer and Stronger Communities - Children and Young People - An Ageing Population - Health and Wellbeing - Housing, Affordable Housing and Quality Neighbourhoods - Transport and Access - Sustaining Hertfordshire's Unique Character and Quality of Life - Promoting Sustainable Development 	<p>Key areas of concern to be taken into account during the SA process and to incorporate in SA objectives as appropriate.</p>
<p>A 50 Year Vision for the Wildlife and Natural Habitats of Hertfordshire</p>	
<p>The 50 Year Vision, forms one component of a suite of strategies being developed for Hertfordshire, through the umbrella Hertfordshire Countryside Strategy. It aims:</p> <ul style="list-style-type: none"> To establish a plan partnership through identifying and consulting key partners in the process. To produce an overview of our present knowledge of the biodiversity resource in the county. To prepare a series of prioritised habitat action plans to guide work on protecting, restoring and re-creating a sustainable level of biodiversity in the county. Within each habitat action plan to identify detailed targets reflecting both national and local importance for the first ten years. To identify a list of priority species for the preparation of action plans. Concise target statements should be prepared for all chosen species. Within each habitat and species action plan to identify delivery mechanisms and sources of finance and advice. To publish the plan and implement the agreed programme of action. To establish a long term monitoring programme to measure the effectiveness of the Plan in achieving national and local targets. <p>Action plans Have been prepared for the following species:</p> <p>Water Vole Common Dormouse Natterer's Bat</p>	<p>Incorporate in SA objectives</p>

Otter Tree Sparrow Bittern Stone Curlew Song Thrush Great Crested Newt Chalkhill Blue Grizzled Skipper Stag Beetle White-clawed Crayfish Great Pignut Cornflower River Water-dropwort Pasqueflower	
LOCAL	
<p>Hertsmere Together Community Strategy First Review 2006-2020</p> <p>Aims & objectives</p> <p>Create a safer environment</p> <p>To reduce crime: prioritising vehicle crime, burglary, domestic violence, race hate and crimes of local concern.</p> <p>To reduce anti-social behaviour and alcohol-related disorder.</p> <p>To reduce harm caused to communities by drugs.</p> <p>To build community confidence and reduce fear of crime levels.</p> <p>Improve and sustain the quality of Hertsmere's environment</p> <p>To improve road safety and obtain the best use of the existing highways network through effective design, maintenance and management.</p> <p>To ensure waste is sustainably managed.</p> <p>To ensure neighbourhoods and public spaces are cleaner and greener, and communities take an active role in managing their own environment.</p> <p>To protect and enhance the natural and built environment.</p> <p>Promote healthier communities and leisure and cultural opportunities</p> <p>To improve opportunities for people to engage in a healthy, active lifestyle through the development of facilities, activities and cultural opportunities.</p> <p>To meet NHS targets of numbers of four week quitters who have accessed the NHS stop smoking service and increase the number of premises where a no smoking policy is active in all buildings and grounds.</p> <p>To increase the number of 5 to 16 year olds who spend a minimum of 2 hours each week on physical recreation or school sports.</p> <p>To increase the number of people who carry out voluntary work in sport or leisure based clubs.</p> <p>Encourage economic development, lifelong learning, employment and regeneration opportunities</p> <p>To ensure local residents have the skills to enable them to compete in the labour market.</p> <p>To increase entrepreneurial activity amongst the local population.</p> <p>To assist the growth and retention of existing businesses and the development of a self-sustaining local economy.</p> <p>To support appropriate inward investment and infrastructure improvements.</p> <p>To support and implement actions which will assist community development and capacity building.</p> <p>Work towards meeting local housing needs</p> <p>To optimise the supply of affordable housing.</p> <p>To improve domestic energy efficiency and reduce fuel poverty.</p> <p>To improve conditions in the private rented sector.</p> <p>To achieve the Decent Homes Standard in social housing by 2010.</p>	<p>Objectives developed at the local level following consultation process. Hertsmere's SA objectives and indicators should closely align with those set out in the Community Strategy.</p>

<p>Hertsmere Local Plan (2003)</p> <p>Objectives for sustainable development</p> <p>Minimise as far as possible the growth in demand for resources (including land and water);</p> <p>Make the most efficient use of non-renewable resources (including land);</p> <p>Increase, where possible, the use of renewable resources where there is unused capacity and an increase in use will not be detrimental to other aims;</p> <p>Increase the reuse and recycling of resources;</p> <p>Maintain and enhance biological diversity;</p> <p>Seek to reduce the adverse impact of transport;</p> <p>Increase the rate of 'carbon fixing';</p> <p>Reduce and prevent pollution and the effects it has on ecosystems and human health;</p> <p>Maintain and enhance the capacity of the natural environment to renew itself;</p> <p>Maintain critical national and local assets which would be impossible or very difficult to replace (such as important habitats, local nature reserves, nature conservation sites and historic buildings);</p> <p>Maintain and enhance stocks of less critical assets and environmental quality (of which no one example is critical but whose overall spread and frequency are important for the environmental character and quality of an area) e.g. Conservation areas;</p> <p>Improve the overall quality of life to provide a safe, healthy, diverse and pleasant environment;</p> <p>Ensure that people's fundamental needs for shelter and economic means of support are met;</p> <p>Increase community awareness and involvement;</p> <p>Improve equality of opportunity in economic and social terms;</p> <p>Have regard to the precautionary principle where the potential damage to the environment is uncertain and significant.</p> <p>Plan objectives</p> <p>Maintain the settlement pattern of small to medium sized towns and viable village communities and maintain and protect the Green Belt throughout the Borough;</p> <p>Concentrate development in towns, through the reuse of previously developed sites, subject to ensuring that this does not adversely affect the quality of their environments;</p> <p>Make provision for around 4,600 additional homes between 1991 and 2011;</p> <p>Ensure that the community's need for affordable housing is provided for within the constraints of the planning system;</p> <p>Make provision for the employment needs of the population and encourage commercial development in appropriate locations;</p> <p>Reduce the adverse effects of movement by guiding development to locations which reduce the need to travel, or are accessible by a variety of modes of transport;</p> <p>Protect existing plant cover (particularly trees) and seek to increase it;</p> <p>Protect critical natural habitats and the green corridors linking them together and aim to create new habitats;</p> <p>Protect and enhance critical built assets;</p> <p>Protect and enhance the water environment;</p> <p>Maximise the benefits from, and minimise the environmental damage caused by, waste;</p> <p>Sustain and enhance the Borough's town and district centres;</p> <p>Allow for improvements to sport, leisure and recreational facilities;</p> <p>Allow for improvements to health, educational, cultural and other facilities;</p> <p>Maintain and, where possible, improve the quality of design and encourage secure and accessible environments.</p>	<p>Contains existing objectives for sustainable development. Review in context of recent plans and policies, and incorporate as appropriate into SA for new LDF.</p>
<p>Smile - a cultural and leisure strategy for Hertsmere</p> <p>Create a safer environment by appropriate development of cultural activities</p> <p>Improve and sustain the quality of Hertsmere's cultural environment</p> <p>Promote cultural opportunities to address health inequalities</p> <p>Through the development of cultural services encourage economic development and regeneration</p> <p>Encourage lifelong learning opportunities</p> <p>Improve access to cultural services and address inequalities</p>	<p>Improving access to cultural and leisure opportunities could form a SA objective</p>

<p>Hertsmere Contaminated Land Strategy</p> <p>Provides a framework for identifying contamination risks and procedures for dealing with contaminated land, encouraging it to be brought back into use. Reflects relevant legislative aims to:</p> <ul style="list-style-type: none"> to identify and remove unacceptable risks to human health and the environment; to seek to bring damaged land back into beneficial use; and to seek to ensure that the cost burdens faced by individuals, companies and society as a whole are proportionate, manageable and economically sustainable. 	<p>Encouraging more effective pollution control could meet a number of SA objectives relating to health and well being, promoting more sustainable development and reducing land (as well as air and water)</p>
<p>Draft Corporate Plan 2006-2009</p> <p>Relevant objectives:</p> <ul style="list-style-type: none"> Build community confidence and further reduce the fear of crime Protect and enhance the natural environment Protect and enhance the built environment Improve waste minimisation in the Borough Reduce environmental nuisance Improve on the range of recreational facilities and activities for our residents Promote and create opportunities for residents to engage in a healthy lifestyle Sustain existing economic prosperity in the Borough Target initiatives to address social and economic inequalities in the Borough Optimise the supply of affordable housing Improve domestic energy efficiency and reduce fuel poverty 	<p>Relates to many of the objectives including reduction of crime, promoting skills, economic growth, affordable homes, accessibility and social inclusion</p>
<p>Crime, disorder and drugs reduction strategy for Hertsmere</p> <p>Reduce crime by targeting:</p> <ul style="list-style-type: none"> vehicle crime domestic burglary domestic violence and race hate crimes of local concern <p>Reduce anti-social behaviour and alcohol-related disorder</p> <p>Reduce harm caused to communities by drugs</p> <p>Build community confidence and reduce fear of crime levels</p>	<p>Relates specifically to objectives which seek promotion of healthy and safe living and reduction in anti-social behaviour</p>
<p>Hertsmere Housing Strategy 2004-2007</p> <p>Sets out the Council's strategy for dealing with housing needs, the homeless, Council housing, people with special needs etc. Updates and replaces the 2000-2003 Housing Strategy. Identifies eight priorities</p> <ul style="list-style-type: none"> Secure the provision of additional affordable housing for the Borough Use partnership working to continue to develop an effective and fit for purpose housing strategy for Hertsmere, and to improve engagement of housing service providers in delivering Hertsmere's Crime and Disorder Reduction Strategy Continue to improve efficiency and effectiveness of services to homeless people Improve provision and co-ordination of housing advice and homeless prevention Develop and implement a robust Private Sector Housing Strategy Review the effectiveness of the Housing Register and nominations rights to housing associations Ensure issues of equal opportunity within the provision of housing in Hertsmere are effectively addressed, particularly for minority ethnic and faith populations Maximise the opportunity of information technology 	<p>Housing is key issue to be addressed through SA objectives; overall objectives of Hertsmere Housing Strategy need to be reflected in SA objectives</p>
<p>Hertsmere Supplementary Planning Guidance: Monitoring and Review – Sustainability Indicators (2003)</p>	

<p>1A. (BVPI 106) The percentage of new homes built on previously developed land: Headline Indicator</p> <p>1B. Number of development proposals which reuse contaminated land</p> <p>1C. (HEF) Land used for 'urban activities' (defined as urban land developed for any purpose, including housing, industry / commerce, etc.)</p> <p>2A. (HEF) Overall number of Wildlife Sites</p> <p>2B. (PUSP) Number of Wildlife Sites with positive management in place</p> <p>3A. (HEF) Volume of motor traffic (million vehicle kilometres per day): Headline Indicator</p> <p>3B (i). (HEF) 'Modal split' (the choice of transport form used) – General Users</p> <p>3B (ii) (HCC) Modal Split for Travel to School</p> <p>3C. (WCCF, 3) Creation or re-opening of good quality, non car routes (cycle routes, 'Greenways', etc.)</p> <p>4A. (WCCF, 1) Creation of well-designed woodland in the Forest area</p> <p>4B. (PUSP) Number of Tree Preservation Orders (TPO's) revised or re-served annually</p> <p>5A. (HEF) Nitrogen Dioxide levels: Headline Indicator</p> <p>6A. Number of Listed Buildings (of each grade) de-listed or on 'At Risk' register: Headline Indicator</p> <p>6B. Number of statutory nature conservation sites (SSSI's, LNR's etc.): Headline Indicator</p> <p>7A. (PUSP) Number of new or revised Conservation Areas designated annually</p> <p>8A. (BVPI 82a) Total tonnage of household waste arisings: percentage recycled: Headline Indicator</p> <p>9A. Number of households in housing need: Headline Indicator</p> <p>9B. Percentage of affordable housing units completed each year (delivered through the planning process) as a percentage of all completions</p> <p>9C. Number of overall annual housing completions</p> <p>10A. Number of people (registered as) unemployed: Headline Indicator</p> <p>10B. Number of businesses in Hertsmere</p> <p>11A. Number of open spaces / play areas provided or improved through the planning process</p> <p>12A. Number of people registered with an interest on the Local Plan database</p> <p>12B. Number of people registered on the SPG consultation list</p> <p>13A. Bi-annual 'health check' of the Borough's town centres (using basic measures)</p> <p>13B. Number of vacant shop units in each town centre</p> <p>14A. (BVPI 125) Total recorded crimes per 1,000 population and percentage detected</p> <p>14B. Number of annual consultations carried out on planning applications with the Police Architectural Liaison Officer</p> <p>14C. Comparison of crime rates between developments endorsed through the 'Secured by Design' process and those without it</p>	<p>Current set of local sustainability indicators. Update in context of other recent plans/policies and include in new SA where appropriate.</p>
<p>Hertsmere Air Quality Review</p> <p>Reviews the achievement of air quality objectives in Hertsmere for a range of identified pollutants. Does not provide high level objectives, but rather identifies specific air quality problems in the Borough. The study concludes that:</p> <p>The UK air quality objectives will be met for carbon monoxide, benzene, 1,3-butadiene, lead, sulphur dioxide and PM10, but not for nitrogen dioxide. The annual mean for nitrogen dioxide is likely to be exceeded in Hertsmere, mainly at locations in close proximity to the M25 and M1 and in the urban centres of Potters Bar and Borehamwood.</p> <p>There are no projected exceedences of the 2004 PM10 objectives, however the 2010 assessment suggested that the proposed annual mean and 24-hour mean objectives may be exceeded at many locations throughout Hertsmere. Although Local Authorities are not permitted at this stage to declare an Air Quality Management Area for a proposed objective, Hertsmere Borough Council should now be aware of this potential non-compliance for future planning and the provision of continuing monitoring programmes.</p>	<p>Potential key sustainability issue. May necessitate specific targets / indicators.</p>
<p>Hertsmere Environmental Strategy 2004</p> <p>This document reviews Hertsmere's existing Environmental Policy of, in particular to look at progress since the Policy was last reviewed in 1998/1999 and to highlight areas where further work needs to be done. The review takes account of changing policies and priorities at national, regional and sub regional level.</p> <p>Following this Policy Review, the Council states:</p> <p>"Hertsmere Borough Council is committed to promoting sustainable development and to protecting the special legacy of the Hertsmere environment. We</p>	<p>Identifies key sustainability objectives / issues. Consider incorporating in Hertsmere's SA objectives.</p>

<p>recognise the importance to the Hertsmere community and to communities across the world of policies based on sound environmental principles. We will take the lead in maintaining the quality of life for the benefit of all who live and work in Hertsmere.”</p> <p>The Council will:- Seek to keep to an absolute minimum the adverse environmental effects of its own buildings, equipment and operations Consider the environmental implications of all Council decisions Meet and where possible exceed the environmental standards set by law Enforce to the best of its ability those environmental standards it has a duty to uphold Put environmental issues as a prime concern in local planning policy Work with local communities to improve their environment in accordance with their priorities and needs Work with partners across the regions and locally to promote environmental standards Campaign to raise awareness of environmental issues and promote environmental action through its recycling and energy conservation services</p>	
<p>Hertsmere Borough Council Best Value Performance Plan 2005-2006</p> <p>Identifies 5 strategic priorities for the Council (as reflected in community strategy): Create a safer environment Improving and sustaining the quality of Hertsmere's environment Address health inequalities Encourage economic development, employment and regeneration opportunities Encourage lifelong learning, leisure and cultural opportunities Improving accessibility to services and addressing inequalities</p> <p>Identifies a long list of corporate performance indicators.</p>	<p>Key sustainability issues to be reflected in SA objectives.</p>
<p>Hertsmere Planning and Design Guidance SPD (2006)</p> <p>The purpose of this SPD is to promote higher standards of design and layout in Hertsmere by setting out the key principles that the Council expects to be applied to new developments in the Borough.</p> <p>This Guide will set clear objectives for achieving good quality design, along with guidelines that the Council will take into account when assessing an application. Applications that demonstrate poor design and inconsistency with the key principles set out in the Guide and corresponding Local Plan policies are likely to be refused planning permission on these grounds. Where developments do not require planning permission, it is intended that this Guide will still provide advice to ensure high quality design in all developments.</p>	<p>To be taken into account and incorporate into SA wherever possible.</p>
<p>Hertsmere Affordable Housing SPD (2008)</p> <p>The Core Strategy Preferred Options Report (November 2007) proposes 15 objectives for Hertsmere's Local Development Framework. Of these, the following are identified as being relevant to the Affordable Housing SPD:</p> <ul style="list-style-type: none"> - To provide the spatial policies necessary to deliver the land use requirements of the Community Strategy - To maintain an adequate supply of suitable land, concentrated on brownfield sites within towns, to accommodate expected development needs and supporting community infrastructure - To assist the community's need for Affordable Housing” - To promote safe, healthy and inclusive communities, respecting the diverse needs of the whole Borough. <p>Two additional objectives, specific to this SPD have also been identified:</p> <ul style="list-style-type: none"> - To contribute towards Government and regional planning objectives related to the development of sustainable communities - To improve partnership working, especially between developers, the Council and Registered Social Landlords (RSLs). 	<p>Housing is key issue to be addressed through SA objectives</p>

Hertsmere Parking Standards SPD (2008)	
<p>The Core Strategy Preferred Options Report (November 2007) proposes 15 objectives for Hertsmere's Local Development Framework. Of these objectives, the following are identified as being relevant to the Parking Standards SPD:</p> <ul style="list-style-type: none"> - To provide the spatial policies necessary to deliver the land use requirements of the Community Strategy - To raise levels of access by seeking development in locations not dependent on access by car and by requiring the provision of accessible buildings - To promote safe, healthy and inclusive communities, respecting the diverse needs of the whole Borough - To protect and enhance local biodiversity within both developed and undeveloped areas - To secure efficient land use through well-designed development reflecting the size, pattern and character of settlements in Hertsmere. <p>Two additional objectives, specific to this SPD have also been identified:</p> <ul style="list-style-type: none"> - To reduce the carbon emissions of new developments by promoting and providing for alternatives to the private car through the use of Travel Plans, securing of s106 contributions and implementation of other appropriate measures. - To assist the delivery of objectives identified in the Local Transport Plan for Hertfordshire 2006-2011 and associated programmes and local area plans. 	To be taken into account and incorporate into SA wherever possible.
Statement of Community Involvement (2006)	
<p>This statement of community involvement (SCI) has been prepared as part of the Local Development Framework. The SCI is a local development document (LDD), which sets out policy for involving the community, both in preparing and revising LDDs and in development-control decisions.</p> <p>Through the SCI, the Council aim to promote effective public involvement in the planning system. This will help to make sure that all sections of the community, including people who do not normally get involved in the planning process, have the opportunity to contribute to the new system. The Council aim to involve local residents, businesses, landowners, groups and organisations, along with stakeholders such as national and regional organisations, in the process and will place an emphasis on making information widely accessible in all formats, and make use of the Internet, the local press and existing networks of communication.</p> <p>The benefits of continuous community involvement are:</p> <ul style="list-style-type: none"> - help people understand the planning processes; - work with groups and individuals who would otherwise not get involved; - identify issues of concern; and - provide an opportunity for negotiation on representations made on LDDs and planning applications. 	Public involvement to be taken into account during the SA process.
Hertsmere Community Strategy 2006-2020	
<p>The Community Strategy has been developed by Hertsmere Together, the Local Strategic Partnership, in consultation with other relevant service providers and stakeholders, local voluntary and community groups, local businesses, and the wider general public. This, combined with statistical evidence, ensures that the Strategy reflects local needs and aspirations.</p> <p>Hertsmere Together's Community Strategy aims to:</p> <ul style="list-style-type: none"> - provide a long-term vision for the future of Hertsmere - provide a means of joining-up local services and improving partnership working - reflect Hertsmere's needs and aspirations - prioritise its objectives on Hertsmere's needs and aspirations - identify gaps in the provision of local services - provide a means of tackling cross-cutting issues - provide a means of identifying resources to address the needs of Hertsmere 	Incorporate in SA objectives.

<p>Hertsmere Together's Strategic Objectives</p> <ul style="list-style-type: none"> - Create a safer environment - Improve and sustain the quality of Hertsmere's environment - Promote healthier communities and leisure and cultural opportunities - Encourage economic development, lifelong learning, employment and regeneration opportunities - Work towards meeting local housing needs

	b) Net change	n/k	n/k	n/k	n/k				
Percent of new homes built on previously developed land		2002: 97% 2003: 99% 2004: 99.5% 2005: 100% 2006/07: 99.5% 2007/08: 91.0% 2008/09: 97.6%	66 70 71 78 n/k	57 60 64 71 n/k	n/k n/k n/k n/k n/k	The tightly drawn Green Belt boundaries in the Borough mean that Hertsmere has been well above National and regional targets and achievement rates in delivering housing from PDL. Between 2006/07 and 2007/08 the percentage of new homes built on previously developed land outperformed the targets. Good, monitoring system already in place	2006/07: 95.0% 2007/08: 90.0%		HBC BVPP 2004-05, 2006-2008.
Average density of new housing	a) All development	2004: 48.1dph 2005: 41.5dph 2006: 27.9dph 2007/08: 40dph 2008/09: 42dph	n/k n/k n/k	n/k n/k n/k	n/k n/k n/k	Between 2004 and 2006, the average density of new housing has fallen since measurement started. In 2005/6, the average density fell below 30dwelling per hectare (dph). However, this can largely be attributed to a large number of low density minor schemes and one for one replacements. However, between 2007/08 and 2008/09 the average density increased from 27.9dph to 42dph. Figures show that the target have been outperformed, although in 2006 the average density of new housing was bellow the target. The average dwellings per hectare should remain relatively high unless there are large developments permitted within green belt areas.	To achieve a Borough wide average of at least 30dph.		HBC Housing monitoring. <u>Annual Monitoring Report 2008/09..</u>
	b) Major developments	2002: n/k 2003: n/k 2004: 73.2dph 2005: 64.8dph 2006: 46.1dph	35.5 41.8 43.1 51.3 n/k	31.4 34.7 34.3 39.0 n/k	n/k n/k n/k n/k n/k	Densities have also fallen for major schemes, though this is perhaps due more to differences in the sites / schemes completed than a long term trend. Between 2002 and 2006 average densities for major schemes in Hertsmere were above the average for both Hertfordshire and the Region.	PPG3 advocates densities of between 30 and 50dph		HBC Housing monitoring, EERA Annual Monitoring Reports
% of new housing built at 30 dwellings per hectare or higher		2004: 93% 2005: 88% 2006: 89%	n/k n/k n/k	n/k n/k n/k	n/k n/k n/k	For the three years that figures are available, the significant majority of new housing completed has been built above the 30dph threshold suggested in PPG3. SOCIAL												
1. To improve educational achievement, training and opportunities for lifelong learning and employability	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.
2. To ensure ready access to essential services and facilities for all residents	+	In directing development to the major towns, the policy option would respect the existing hierarchy and maximise development opportunities, including the growth of essential facilities and services, in the most accessible 'main' locations.	+/--	A flattening of the existing hierarchy may result in improved facilities and services for some communities as a result of development opportunities being capitalised upon. However, there is a considerable risk that a less 'controlled' approach to development may result in over-burdening of some local services and facilities and failure of sustainable transportation systems, with detrimental effects against the objective.	++	An accessibility based approach to development, which includes services and facilities, has strong synergies with the objective and should therefore support it.	+/--	As Option 2 – not only is a market led approach likely to result in restricted types of development (i.e. preference for high value such as housing) that excludes services and facilities, but it is also likely to fail to reflect the sustainable transportation network.	--	In permitting rural expansion, there is a considerable risk that new housing in rural areas would have poor access to essential services and facilities, exerting considerable pressure on rural centres. However, the scale of these negative effects will depend on the location of the rural expansion.	++	In directing development of a high density to the major towns, the policy option would respect the existing hierarchy and maximise development opportunities, including the growth of essential facilities and services, in the most accessible 'main' locations.
3. To meet identified housing needs and improve the quality and affordability of housing	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	+/-	Rural expansion may help to meet the housing needs of concealed households in rural areas. However, there is a risk that rural sites may be more attractive to market developers, serving to exacerbate	0	No obvious effects.

	Option 1 – Maintain the current policy position (Bwood / PB first)		Option 2 – Flatten / remove hierarchy		Option 3 - Accessibility based approach		Option 4 - Market led / do nothing		Option 5 – rural expansion		Option 6; Substantial Urban Intensification	
SA/SEA Objective	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation
										problems of housing affordability in rural areas.		
4. To reduce poverty and social exclusion and promote equality of opportunities	++/-	Focusing development on the 'main' towns in the District may have benefits in terms of ensuring that residents in the majority of settlements can access these centres by a range of modes; however, there is a risk that more peripheral areas will suffer decline as a result of a lack of targeted investment, which could exacerbate inequalities.	++/-	The removal of the hierarchical approach to development location should contribute to a more equitable pattern of development across the District. However, there is a risk that a more dispersed approach to development may fail to be matched by requisite improvements in transportation networks, potentially increasing accessibility deprivation.	++	Focusing development in the most accessible locations across the District should help to improve opportunities for social engagement and promote a more equitable pattern of development and investment.	--	Reliance upon the market will result in economically driven patterns of development – this is likely to favour the more affluent settlements and thus exacerbate incidences of social exclusion and inequality of opportunity.	+/-	Permitting expansion of rural settlements may help to extend opportunities for local community engagement; however, there is a risk that a more dispersed approach to development may fail to be matched by requisite improvements in transportation networks, potentially increasing accessibility deprivation.	++/-	Focusing development on the 'main' towns in the District may have benefits in terms of ensuring that residents in the majority of settlements can access these centres by a range of modes; however, there is a risk that more peripheral areas will suffer decline as a result of a lack of targeted investment, which could exacerbate inequalities.
5. To reduce and prevent crime, fear of crime and anti social behaviour	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.
6. To improve population's health and reduce inequalities both geographically and demographically	+	In focusing development in the more accessible 'main' towns, the policy option may help to improve access to health care facilities, sporting and leisure provision for a wider range of the population.	+/-	The removal of the hierarchy may result in a more equitable pattern of development, potentially including health care, sporting and leisure provision; however, there is a risk that this will not be supported by the transportation network, which could limit the spread of benefits.	++	In directing development to a wider range of accessible locations, the policy option should contribute to improved levels of access to health care, sporting and leisure provision for a wide section of the community.	--	The market led approach is unlikely to deliver provision in the areas of greatest need, thus there is a risk that health inequalities may be deepened.	+/-	The opportunity to develop a new rural settlement (s) may result in the addition of some community based facilities including sporting and leisure provision; however, there is a risk that additional residential development will not be supported by the transportation network, which could limit the	+	In focusing development in the more accessible 'main' towns, the policy option may help to improve access to health care facilities, sporting and leisure provision for a wider range of the population.

7. To make the most efficient use of previously developed land and existing buildings before Greenfield sites	++	By focusing development in the main towns in Hertsmere (Borehamwood and Potter Bar) is likely to ensure the most efficient use of PDL and existing buildings before greenfield sites.	+	By flattening or removing the hierarchy for development in Hertsmere this may result in a more dispersed development which may not result in making the most efficient use of PDL in the main towns but may able smaller towns to accommodate some development. This option should still avoid Greenfield development.	++	This option is similar to option 1 as the towns with the greater accessibility in Hertsmere are Borehamwood and Potters Bar also allow redevelopment of PDL and buildings in other towns such as Radlett and Bushey which is also likely to have positive effects.	-	This option is not to have a development hierarchy policy and is likely to result in an unstructured approach with no control over directing development in the main settlements and may result in greenfield development if there is no strict policy resisting development in greenfield sites.	--	Rural expansion will not seek as priority, to make the best use of PDL and will involve Greenfield release which is contrary to this objective, to a greater extent than option 4.	+++	By focusing high density development in the main towns in Hertsmere (Borehamwood and Potter Bar)it is likely to ensure the most efficient use of PDL and existing buildings before greenfield sites.
8. To reduce contamination and safeguard soil quality and quantity	++	By focussing development in the main towns in Hertsmere development is likely to be focussed on PDL that may require remediation of contaminated land before greenfield sites and thus no potential loss of valuable soil resources.	+	Flattening or removing the hierarchy may result in more dispersed development not making the best use of PDL. Consequently the area of land potentially remediated may be reduced.	++	Similar effect to option 1 as development of PDL is likely in other towns such as Radlett and Bushey.	-	Policy may result in greenfield development with consequent loss of valuable agricultural soil resources.	--	Rural expansion will result in major levels of Greenfield development with significant negative effects through the permanent loss of agricultural land.	++	By focussing development in the main towns in Hertsmere development is likely to be focussed on PDL that may require remediation of contaminated land before greenfield sites and thus no potential loss of valuable soil resources.
9. To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of	+	Identification of a development hierarchy presents opportunities to continue with a spatial policy to direct development to the main towns in Hertsmere, potentially assisting in the	+/-	Removing the hierarchy would enable the Borough's towns to grow according to the availability of suitable sites over time however, with a hierarchy; the roles of difference centres may be insufficiently defined	+	This option would produce similar positive effects to option 1 as it is likely that development will still be focused in Borehamwood and Potters Bar due to these areas having	-	This policy option will result in an unstructured approach with no control over spatial distribution of development potentially to the detriment historic buildings and	--	Rural expansion, depending on location, is likely to have overall negative effects on landscape character, however, focusing in one area in Hertsmere, may allow for mitigation.	+/-	Substantial urban intensification directed to the main towns in Hertsmere, may potentially assist in the protection and enhancement of historic buildings. However development at such density is

	Option 1 – Maintain the current policy position (Bwood / PB first)		Option 2 – Flatten / remove hierarchy		Option 3 - Accessibility based approach		Option 4 - Market led / do nothing		Option 5 – rural expansion		Option 6; Substantial Urban Intensification	
SA/SEA Objective	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation
importance to the community		protection and enhancement of historic buildings.		to achieve a desired balance of development potentially to the detriment of historic buildings through loss of local character and unsympathetic development.		high levels of accessibility.		features through impacts on local character resulting in harm to the setting of historic assets through unsympathetic development.				likely to have a significant negative effect on landscape character.
10. To maintain and enhance the quality of countryside and landscape	0	No obvious effects as this policy option concentrates all development within the two main urban centres.	0	No obvious effect as this option, whilst flattening the hierarchy, would still encourage development in the settlements in Hertsmere.	0	No obvious effects as this policy option concentrates all development within the two main urban centres.	--	Potential negative effects with this policy as removing policy and leaving up to the market may result in development in greenfield areas which are considered desirable for developers.	--	Potential negative effects as this option will result in Greenfield release which may be detrimental to the quality of the countryside and local landscape, however, focusing development in one chosen area, may allow for mitigation.	0	No obvious effects as this policy option concentrates all development within the two main urban centres.
11. To reduce dependence on private car and achieve modal shift to more sustainable transport modes	++	Focussing development in main towns is likely to make the best use of existing sustainable transport infrastructure.	-	Dispersed development would be contrary to the development of a sustainable transport system and would lead to growth in car usage and congestion.	+++	Accessibility based approach allows flexibility to consider the provision of sustainable transport infrastructure and could allow for significant levels of modal shift across the District.	--	Unrestricted growth is likely to lead to greater use of the private car and associated congestion problems.	--	Rural expansion is likely to lead to greater use of the car and traffic congestion, particularly in areas that currently may not suffer from congestion problems.	+++	Focussing high density development in main towns is likely to make the best use of existing sustainable transport infrastructure.
12. To protect and enhance wildlife and habitats which are important on an international, national and local scale	-	Possible negative effects as brownfield sites and urban infill sites may be of importance for local biodiversity which would be under pressure through intensifying development in the two main towns.	-	Possible negative effects as brownfield sites and urban infill sites may be of importance for local biodiversity which would be under pressure through intensifying development in the main settlements in Hertsmere.	-	Possible negative effects as brownfield sites and urban infill sites may be of importance for local biodiversity which would be under pressure through intensifying development in the two main towns.	--	The extent to which this option could result in the development of Greenfield sites important for local biodiversity, this option is likely to have moderately negative effects.	---	This option will involve the loss of Greenfield and the extent to which, Greenfield sites are important for local biodiversity, this option is likely to have strongly negative effects, as certainty of Greenfield development with this option is higher.	--	Possible negative effects as brownfield sites and urban infill sites may be of importance for local biodiversity which would be under pressure through substantially intensifying development in the two main towns.

	Option 1 – Maintain the current policy position (Bwood / PB first)		Option 2 – Flatten / remove hierarchy		Option 3 - Accessibility based approach		Option 4 - Market led / do nothing		Option 5 – rural expansion		Option 6; Substantial Urban Intensification

20. To provide a prosperous, balanced and stable economy	--	Failure to protect any employment sites across the Borough will render it increasingly difficult to successfully develop sites for employment uses when they are competing with higher value development such as housing. The resultant effect is likely to be highly detrimental to economic prosperity.	+/-	In not protecting non-designated employment sites, pressure for redevelopment for higher value uses is likely to increase. Dependent on the nature of development, this may result in positive (e.g. better response to market) or negative (e.g. failure to balance employment to homes) effects.	+/-	In protecting all employment land irrespective of use, there is a risk that the economy will become unbalanced with poor co-ordination of jobs and homes and retention of sites that no longer meet business requirements. However, on the other hand this option is the only option that protects all employment land. Therefore if the employment land study identifies no surplus in existing employment areas then this policy option would allow the continuation of a stable economy.	++/-	This policy approach offers the opportunity to ensure that employment development is matched to settlement needs in terms of use and spatial distribution. However, there is a risk that it could be overly prescriptive, thus limiting entrepreneurial activity and constraining the ability to adapt to the market.	++	The redistribution of employment sites on the basis of improving the ease and attractiveness of development (through selective site disposal and greenfield release) should help to increase take up of employment sites for development as well as enabling development of former employment sites for alternative uses. This has the potential to significantly support the economy and presents a proactive balance.	--	Under the do nothing option, it is highly likely that much employment land will be lost to higher value development such as housing, which is likely to lead to a gross imbalance between housing and employment, resulting in an unsustainable economy.
21. To sustain and enhance the viability and vitality of town centres	-	Failure to protect employment sites for continued employment use may have significant detrimental effects in town centres where, over time, competing development pressure is likely to lead to employment loss. Without business activity in town centres, vitality and viability are likely to be compromised.	0	No obvious effects.	0	No obvious effects.	+	In adopting a policy approach that includes a spatial element, this option presents opportunities to ensure that employment type and location is determined in a manner that will maximise complementary benefits for town centre vitality and viability.	+	The release of constrained employment sites within town centre for alternative forms of development may have benefits for town centre vitality and viability through enabling beneficial development of vacant/under-used sites, for example for housing or leisure uses.	--	Without policy intervention, it is likely that employment uses within town centres will be amongst those lost to higher value development, with corresponding detrimental effects for town centre vitality and viability, potentially creating dormant villages.

Table D3: Assessment of the range of options for achieving Core Strategy Policy Theme: location and scale of development - Extent of Green Belt

Scale of Effect (SE): 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative

	Option 1 – Maintain current policy position		Option 2 – Review Green Belt, where required to meet growth targets		Option 3 - Extend Green Belt, including incorporation of safeguarded areas back into the Green Belt, notwithstanding growth targets		Option 4 - Do nothing

1. To improve educational achievement, training and opportunities for lifelong learning and employability	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.
2. To ensure ready access to essential services and facilities for all residents	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.
3. To meet identified housing needs and improve the quality and affordability of housing	0	No obvious effects.	++	The release of greenbelt to meet the growth targets may contribute to meeting the housing needs in Hertsmere.	-	Extending the greenbelt boundary may preclude Hertsmere meeting housing targets and therefore is likely to have negative effects against this objective.	++	Having no policy intervention is likely to mean developers will contribute to meeting identified housing targets drive by market demand and profit.
4. To reduce poverty and social exclusion and promote equality of opportunities	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.
5. To reduce and prevent crime, fear of crime and anti social behaviour	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.
6. To improve population's health and reduce inequalities both geographically and demographically	+	Protection of existing green belt from development may have indirect health benefits in terms of safeguarding land for recreation and leisure. Protecting vegetation can also assist with improving air quality, which can have health benefits, particularly for respiratory disorders.	-	The review option is likely to result in a reduction of green belt over time. This is likely to have adverse effects in terms of reducing land available for recreation and leisure. Increased built development on former greenfield land may also adversely affect air quality, which may have disbenefits for health.	++	Extension of the green belt is likely to have benefits in terms of increasing the amount of land available for recreation and leisure. Improvements to air quality are also likely, with attendant health benefits, particularly for respiratory disorders.	--	Without intervention, green belt land is likely to be lost to built development. This is likely to have adverse effects in terms of reducing land available for recreation and leisure. Increased built development on former greenfield land may also adversely affect air quality, which may have disbenefits for health.
ENVIRONMENTAL								
7. To make the most efficient use of previously land developed land and	+	While current green belt boundaries are maintained development will be constrained to previously developed land.	-	Growth targets are likely to push development into Greenfield sites as previously developed sites are exhausted.	++	Extending green belt is likely to force further development to take place on previously developed land and buildings.	--	Without protection from policy, green belt would be considered for development as this is generally more desirable for developers.

	Option 1 – Maintain current policy position		Option 2 – Review Green Belt, where required to meet growth targets		Option 3 - Extend Green Belt, including incorporation of safeguarded areas back into the Green Belt, notwithstanding growth targets		Option 4 - Do nothing	
SA/SEA Objective	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation
existing buildings before Greenfield sites								
8. To reduce contamination and safeguard soil quality and quantity	++	Retention of current green belt policies will have a significant positive effect on safeguarding soil quality and quantity.	--	May result in the loss of green belt to development with potential for negative effects through direct loss of soil resources.	+++	Likely to safeguard additional land from development over option 1 with greater positive effects.	---	Will result in the loss of significant areas of protected land to development and associated permanent loss in soil resources.
9. To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	+	Protection will be maintained with this policy option while boundaries remain the same.	-	Risk of some negative effects on historic assets and their setting if the review leads to development in green belt in response to growth.	++	Extension of green belt will afford further protection to landscape character and heritage assets.	--	Without protection from policy, green belt could be considered for development with potential negative effects on landscape and historic assets.
10. To maintain and enhance the quality of countryside and landscape	+	Protection will be maintained with this policy option while boundaries remain the same.	-	Risk of some negative effects on the quality of the greenbelt if the review leads to development in green belt in response to growth.	++	Extension of green belt will afford further protection to the greenbelt.	--	Without protection from policy, green belt could be considered for development with negative impacts on the countryside and landscape
11. To reduce dependence on private car and achieve modal shift to more sustainable transport modes	+	Retention of existing policy concentrates development within urban areas which is likely to be better connected to sustainable modes of transport.	-	May result in new developments in urban fringe locations that would be poorly linked to sustainable transport modes leading to development that is dependent on the car for access.	++	Similar effect to option 1 although to a greater extent.	--	Likely to lead to isolated developments located away from sustainable modes of transport which will depend on the private car.
12. To protect and enhance wildlife and habitats which are important on an international, national and local scale	+	Protection will be maintained with this option while boundaries remain the same.	-	Risk of some negative effects to local biodiversity if review leads to development in green belt in response to growth.	++	Extension of green belt will afford further protection to biodiversity sites and important flora and fauna found in Greenfield locations.	--	Without protection from policy, green belt could be considered for development with negative effects on the wildlife and habitats.
13. To improve the quality of surface and ground waters	+	Retention of existing policy protects water resources in green belt areas.	-	May result in development in greenfield locations with negative effects on water quality during construction and in the long term from runoff from impermeable surfaces.	++	Additional protected land will have a significant positive effect on water quality in those newly protected areas.	--	Likely to lead to greenfield development with consequently significant negative effects on water quality from construction and run off.
14. To minimise water consumption	0	No obvious effects.	+/-	New development from this option will require additional water resources; however, water saving devices could be incorporated into new development.	0	No obvious effects.	+/-	New development from this option will require additional water resources; however, water saving devices could be incorporated into new development.

	Option 1 – Maintain current policy position		Option 2 – Review Green Belt, where required to meet growth targets		Option 3 - Extend Green Belt, including incorporation of safeguarded areas back into the Green Belt, notwithstanding growth targets		Option 4 - Do nothing	
SA/SEA Objective	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation	SE	Comments/ explanation
15. To minimise the risk of flooding taking account of climate change	+	Likely to have a positive effect by restricting development in areas of green belt therefore reducing the potential risk of flooding but not allowing development.	-	May result in development in greenfield locations with negative effects on flood risk.	+	Likely to have a positive effect by restricting development in areas of green belt and therefore reducing the risk of flooding.	--	This option may result in development in greenfield locations thus exacerbates the risk of flooding, to a greater extent in designated floodplain areas.
16. To improve local air quality	0	No obvious effects.	-	See assessment of objective 11. Additional traffic and congestion generated by development may lead to a negative effect on air quality.	0	No obvious effects.	--	See assessment of objective 11. Additional traffic and congestion generated by development may lead to a negative effect on air quality. Scale of effect is likely to be greater than option 2.
17. To reduce greenhouse gas emissions	0	No obvious effects.	-	See assessment of objectives 11+16. Additional traffic and congestion may lead to a negative effect on greenhouse gas emissions.	0	No obvious effects.	--	See assessment of objectives 11+16. Additional traffic and congestion may lead to a negative effect on greenhouse gas emissions. Scale of effect is likely to be greater than option 2.
18. To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.
19. To reduce the generation of waste and encourage re-use and recycling of waste	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.
ECONOMIC								
20. To provide a prosperous, balanced and stable economy	0	No effect	++	Increasing land available through reviewing greenbelt boundaries may result in land being released for housing or employment which is likely to benefit the economy in Hertsmere.	-	Extending the greenbelt may preclude land available to meet the housing targets or employment land requirements which is likely to be detrimental to the economy.	+	With no policy intervention, the market will decide on the uses of land in the greenbelt which may contribute to supporting the economy in Hertsmere however, leaving it to the market will result in uncertainty.
21. To sustain and enhance the viability and vitality of town centres	+	Protection of the green belt is likely to result in greater concentration of development within existing settlements, which should help to improve their viability through increased demand for services and facilities.	+/-	The review approach is likely to result in a reduction of green belt arising from development pressure. This could have positive or negative effects – greenfield development may further disperse the population; or alternatively, planned development through urban extensions or similar may better support vitality and viability.	++	Extension of the green belt is likely to result in much greater densities of development within the existing settlements. Increased population in locations more accessible to existing settlements should help to support town centre vitality and viability.	--	No policy intervention is likely to result in widespread loss of greenfield land to development pressure. This presents a much heightened risk of more dispersed development patterns, which are less able to support town centres.

SOCIAL												
1. To improve educational achievement, training and opportunities for lifelong learning and employability	+	Community facilities can be important venues for education and training courses, particularly adult learning. Their protection should contribute to the objective.	++	The policy option permits the use of vacant sites for redevelopment to meet community needs. This offers the potential to contribute to the objective by providing additional venues for education and training, accessible to community members.	0	No effect – the policy option is concerned primarily with delivery of health care services.	++	The policy option lends strong support to the provision of new facilities which offers the potential to contribute to the objective by providing additional venues for education and training.	-	Community facilities can be important venues for education and training courses. The policy option supports the redevelopment of such sites for alternative uses and, as such, their loss would run counter to the objective.	--	Without policy intervention it is likely not only that new provision would not be forthcoming, but also that development pressure would result in the loss of existing community facilities.
2. To ensure ready access to essential services and facilities for all residents	+	The policy option seeks to protect all existing facilities from development. This should help to maintain accessibility of services and facilities to residents.	++	As option 1, although this option also seeks additional provision through conversion in residential areas, which should assist in increasing the overall accessibility and availability of services and facilities to residents.	+	This policy option permits the conversion of residential premises to essential health care facilities where there is identified need – this should help to improve accessibility in certain areas.	+++	The pro-active policy approach should both maintain existing and create new facilities and services. Addition provision should help to secure better availability and accessibility of services to a wider section of the population.	-	Release of sites on the basis of low demand will reduce the overall accessibility of essential services and facilities with particularly acute detrimental effects in certain areas (i.e. the user groups of closed facilities). This would fail to support the objective.	--	Without policy intervention it is likely not only that new provision would not be forthcoming, but also that development pressure would result in the loss of existing community facilities. This would therefore reduce overall accessibility.
3. To improve the quality and affordability of housing	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	+	The release of surplus and unused sites for other uses potentially housing is likely to contribute to meet identified housing needs.	0	No obvious effects.
4. To reduce poverty and social exclusion and	+	Community and leisure facilities are important hubs for social engagement.	++	Community and leisure facilities are important hubs for social engagement. The	+	Community and leisure facilities are important hubs for social engagement.	++	Community and leisure facilities are important hubs for social engagement.	+/--	Community and leisure facilities are important hubs for social engagement. ECONOMIC								
20. To provide a prosperous, balanced and stable economy	+	Maintaining habitats will contribute indirectly towards quality of life and a stable economy.	+/-	Potential for positive and negative effects. The buffer zone will provide additional protection for habitats, with indirect positive economic effects, however this option may restrict development potential for housing and employment uses. Scale of effect is dependent on the size and scale of the buffer zone and potential development sites affected.	++	Maintaining and providing new habitats will contribute indirectly towards quality of life and a stable economy.	-	Loss of habitats may indirectly contribute towards poor quality of life with subsequent economic effects.
21. To sustain and enhance the viability and vitality of town centres	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.

Appendix E - Assessment of Preferred Policy Options (2006)

E.1 Assessed Core Policies 2006

- E.1.1 Table 5.1 presents the first set of 26 Core Policies that were assessed by the sustainability appraisal and which have been developed and refined through an iterative process by HBC in conjunction with, and incorporating advice from, the SA Team. The first set of Core Policies was assessed in November 2006.

Table E.1 - First Set of Core Policies Assessed (November 2006)

Policy	Description
Strategic Spatial Policies	
Policy SP1 - Improving and sustaining the quality of the local environment	The use and development of all land will be assessed against the need to protect and enhance the natural and built environment, including the diverse character and local distinctiveness of the Borough. Development should take place within the environmental capacity of its locality and in proportion to its location within the hierarchy of settlements in the Borough. Development will be required to maximise the conservation of land, energy and resources and should be designed to a high standard, taking advantage of opportunities to improve the character and quality of an area.
Policy SP2 - A safe and inclusive environment	New development will be required to create places which are safe and secure, thereby reducing crime and the fear of crime. To achieve this, development will also be expected to contribute to the promotion of social inclusion by ensuring accessibility of key services to all sections of the community, including those with reduced levels of mobility.
Policy SP3 - Promoting healthier communities and leisure and cultural opportunities	Proposals which maintain and improve the stock of social, educational, sports and leisure facilities for the local community will be supported by the Council. Where development cannot take place within the limits of existing community infrastructure, additional local provision should be made on both allocated and windfall development sites.
Policy SP4 - Employment opportunities and economic development	The Council will support proposals which attract commercial investment, maintain economic competitiveness and provide employment opportunities for the local community. The provision of training opportunities for the local workforce will be encouraged and sought as part of new employment development in the Borough.
Policy SP5 - Meeting local housing needs	The Council will increase the supply of new housing the Borough by supporting new housebuilding schemes on sites in sustainable locations, with a focus on development within Borehamwood, Potters Bar and Bushey. The provision of adaptable and affordable homes for the local community will be sought in all locations and suitable proposals from social rented landlords will be supported, alongside the provision of affordable homes on privately developed sites.
Housing	
CS1 - The location and supply of new homes	<p>The Council will make provision for 4,200 new homes (at an average annual housebuilding rate of 210 homes) in accordance with the requirements of the draft East of England Plan for the period 2001 – 2021 or any higher housing target set in the final Plan, up to a maximum of 5,000 new homes. In providing for a target of 4,200 homes and identifying new locations for development, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints; ii) the density of the surrounding area; iii) the need to retain existing housing; iv) the need to locate new development in the most accessible locations; v) the settlement hierarchy identified in the Hertsmere Core Strategy; and vi) the need to locate development within the boundaries of existing built-up areas.
	The identification of land beyond existing built-up areas for any increased housing target should continue to be based on criteria (i) to (v).
CS2 - Phasing of Housing Development	<p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policy CS1, the Council will make provision for:</p> <ul style="list-style-type: none"> - Up to 656 additional new homes in Phase 1 between April 2006 and March 2011 (equivalent to 219 homes per year) - Up to 848 additional new homes in Phase 2 between March 2011 and April 2016 (equivalent to 283 homes per year)

Policy	Description
	<p>- Up to 841 new homes in Phase 3 between March 2016 and April 2021 (equivalent to 280 homes per year)¹</p> <p>Should a total housing target of 5,000 homes be set in the East of England Plan, additional sites should be identified in the Site Allocations DPD to enable the provision of a further 103 homes in Phase 2 and 462 homes in Phase 3.</p> <p>Housing sites will be phased on this basis in the Site Allocations DPD to facilitate the required levels of housebuilding sought in the East of England Plan. Based on the findings of the Annual Monitoring Report, allocated land in later phases will be brought forward, where necessary, to maintain the five year supply of land for housing. In order to prevent the overdevelopment of housing in the Borough, the phasing and release of land allocated in the Site Allocations DPD will be reviewed where the number of units permitted on different sites, over any period of three years, significantly exceeds the maximum amounts sought over that period under the terms of this policy. Should the total East of England Plan housebuilding requirements be met during the Plan period, further residential development will not be permitted in the Borough where it results in the net development of more than 15 new units.</p>
CS3 - Affordable Housing	<p>In order to optimise the supply of affordable housing, developments involving more than 15 residential units, or residential sites of more than 0.5 hectares, should make provision for an element of affordable housing. The proportion of homes on each site which are affordable should comprise 40% of total proposed housing. A lower affordable housing requirement of 35% will be permitted where it can be demonstrated that a higher proportion cannot be realistically accommodated within a site or that it would jeopardise the viability of a scheme. On sites requiring the provision of affordable housing, the Council will seek to maximise the provision of affordable, rented accommodation with at least 75% of affordable homes to be provided in the form of social rented housing, managed through a Registered Social Landlord.</p>
CS4 - Affordable housing in rural areas on exception sites	<p>In all identified settlements in the Green Belt, as set out on the Core Strategy Key Diagram, the Council may permit the development of small scale affordable housing schemes as an exception to normal policies. Such schemes should meet the identified needs of people local to the village or settlement, remain affordable in perpetuity and be managed by a Registered Social Landlord. Priority will be given to sites located on previously developed land within settlements and the scale of development should not exceed the level of need identified.</p>
CS5 - Gypsies and Travellers	<p>The Council will work with neighbouring Local Authorities in south and west Hertfordshire to provide for the further needs of Gypsies and Travellers (as defined in Circular 01/06). On the basis of identified need within south and west Hertfordshire, the Council will seek to provide for any additional plots through the identification of land in the Site Allocations DPD. In identifying any required additional or extended sites, consideration will be based on a range of criteria including:</p> <ul style="list-style-type: none"> i) a sequential site selection process with an emphasis on land which has been previously developed; ii) safe and convenient access to the primary road network with proximity to the major road network and without blocking any existing rights of way ; iii) avoiding prejudicing residential or rural amenity as a result of visual intrusion, excessive noise, lighting, traffic generation or activity at unsocial hours; iv) avoiding over dominating and respecting the size and scale of the nearest settled community; v) safe and acceptable environmental conditions within the site including the need to avoid air and noise pollution and significantly

¹ Annual equivalents may not tally due to rounding

Policy	Description
	<p>contaminated land;</p> <p>vi) an ability to receive essential services including water, sewerage, drainage and water disposal;</p> <p>vii) location within reasonable proximity to key local services; and</p> <p>viii) the potential for a site to be effectively landscaped and where necessary, an adequate buffer between the site and any nearby housing.</p>
CS6 - Housing Mix	<p>To help meet local housing needs, proposals for new housing should provide an appropriate mix of new homes in terms of housing size and type. Developers should ensure that:</p> <p>i) 100% of new homes on all sites are built to Lifetime Homes standards, with the exception of schemes involving the conversion of existing buildings resulting in six new units or less;</p> <p>ii) Housing developments in excess of 10 units contain sufficient variation within their housing mix, with sites of at least 25 units or 1 hectare reflecting identified variation within the Borough's housing need; and</p> <p>iii) On particularly large development sites, a proportion of sheltered housing is provided as part of the overall housing mix.</p> <p>The Council will seek to identify land, through the Site Allocations DPD, where sheltered housing can be included as part of any future development.</p>

Policy	Description
Economy	
CS7 - Scale and distribution of employment land	<p>In order to encourage economic development and promote a competitive local economy, provision will be made for the supply of at least xx ha of designated employment land for B-class development within the Borough up to 2021, focused on the following locations and as identified on the Key Diagram:</p> <p><u>Employment Areas</u></p> <ul style="list-style-type: none"> i) Elstree Way, Borehamwood ii) Stirling Way, Borehamwood iii) Cranborne Road, Potters Bar iv) Station Close, Potters Bar v) Otterspool Way, Bushey <p><u>Key Employment Site</u></p> <ul style="list-style-type: none"> i) Centennial Park, Elstree <p>The boundaries of these locations will be clarified in the Site Allocations DPD including the release of existing sites within these areas for new housing or housing-led mixed-use development where appropriate. Any release of designated employment land for housing-led or mixed-used development, during the plan period, will be based on an assessment of whether:</p> <ul style="list-style-type: none"> i) there is any realistic prospect of that land being developed or occupied for employment purposes during the plan period; ii) the development of a particular site during the plan period would lead to an over-supply of housing; iii) the environmental, locational and physical characteristics of the current site or use are appropriate for continued employment use; iv) an acceptable environment can be provided for housing-led development, including its impact on local traffic levels; v) a housing-led development would prejudice the ability of nearby businesses to operate; and whether vi) the employment land release would prejudice the implementation of the Elstree Way Corridor Planning and Design Brief and other Council economic development and regeneration strategies.
CS8 - Local significant employment sites	<p>In order to sustain a competitive local economy with good access to employment for the local population, the Council will seek to maintain a supply of smaller, business units across the Borough. The Council will work with key partners, including the South West Hertfordshire Business Partnership and local Chambers of Commerce, to identify Local Significant Employment Sites. These sites will comprise economically viable business accommodation over 0.25 hectares with satisfactory access, parking and environmental conditions, for B-class and other identified, employment generating uses. Any redevelopment of a Locally Significant Employment Site for housing or other development will be based on an assessment of the criteria in Policy CS7.</p>
CS9 - Land use within employment areas	<p>Activities within designated Employment Areas will be limited to office, industrial, warehousing and other B-class uses. Any new office development exceeding 2,500 sq m within Employment Areas will be limited to the Elstree Way, Borehamwood Employment Area, subject to meeting environmental and other relevant DPD / Local Plan Policies.</p> <p>Certain other uses will also be permitted within Employment Areas, comprising waste management, builders merchants, film / television studios</p>

Policy	Description
	and production, and car dealerships and trade counter operations where the extent of any (non-trade) retail or sales activity display remains ancillary to the principal use of the site.
CS10 - Promoting film and television production in Hertsmere	<p>To promote the retention and growth of the film and television production industry in the Borough, the Council will support proposals relating to film and television production and ancillary or associated uses in Borehamwood. Proposals to refurbish and upgrade the Elstree Film Studios and BBC Elstree Centre will be supported subject to environmental constraints and other relevant policies.</p> <p>In order to facilitate the operational requirements of the film and television production industry, the Council will also seek to make a Local Development Order (LDO) on the principal studio sites. The LDO will grant permission for future, small-scale changes within these sites relating to their primary use as locations for film and television production.</p>
Open Land and Environment	
CS11 - Protection and enhancement of the natural and historic environment	<p>All development proposals must conserve and enhance the historic and natural environment, landscape character and bio-diversity in order to maintain and improve environmental quality. Development proposals should be designed to a high quality and not result in significant harm to the openness and appearance of the Green Belt and to identified, protected sites of ecological, geological, historic or archaeological value and will not be permitted unless:</p> <ul style="list-style-type: none"> i) there is an over-riding need for the development in the public interest which clearly outweighs the conservation value of the site; ii) no suitable alternative sites exists to accommodate the development; iii) adequate mitigation and/or compensatory measures are provided; iv) in the case of the highest quality agricultural land (Grades 1, 2 and 3a) and Preferred Areas of mineral extraction, there is no likelihood of the land being sterilised.
CS12 – Promoting recreation access to the countryside	<p>The Council will work with its partners and relevant agencies to safeguard, enhance and facilitate access to the local countryside. Measures which secure the provision of safer and more secure car-free access to Watling Chase Community Forest Gateway Sites, Historic Parks and Gardens and countryside attractions will be actively sought. The provision of or enhancement of visitor facilities in the countryside will be encouraged where this:</p> <ul style="list-style-type: none"> i) specifically enhances access for the local population ii) does not harm the character, appearance and openness of the Green Belt; and iii) does not cause or add significantly to local road congestion.
CS13 - Environmental Impact of new development	<p>The Council will work with key partners, including the Environment Agency and Natural England, to ensure that development proposals do not create an unacceptable level of risk from the impact of natural forces or human activity on occupiers of a site, the local community and the wider environment. Proposals must take particular account of the need to:</p> <ul style="list-style-type: none"> i) mitigate the potential adverse effects of climate change; ii) ensure adequate protection from the risk of on and off-site flooding; iii) avoid or mitigate the effects of pollution from noise, lighting, odours and other emissions; and iv) ensure that land and buildings are free from contamination which might adversely affect human health or the environment. <p>Development proposals must demonstrate that any adverse effects can be overcome by appropriate alleviation and mitigation, which are</p>

Policy	Description
	capable of being secured through planning conditions or an obligation.
CS14 - Efficient use of natural resources	<p>Development proposals should ensure that efficient use is made of natural resources through their layout, design, construction and measures for waste disposal, by incorporating conservation measures and by making the best use of renewable resources. Developments larger than 1,000 sq m or 10 new homes will be required to include measures to off-set 10% of total predicted carbon emissions through a combination of sustainable design and construction and on-site renewable energy generation.</p> <p>To facilitate these requirements, the Council will support the development of on-site recycling facilities and new sources of renewable energy generation where there is no adverse environmental impact on nearby communities.</p>
Building Sustainable Communities	
CS15 - Access to services	<p>The Council will work with local service providers to facilitate their stated land use and buildings requirements through the identification of mixed-use development opportunities in the Site Allocations DPD. The Council will also require new development to contribute to the Community Strategy aim of ensuring fair access to services and the wider goal of creating a safer and more sustainable environment. New proposals will be assessed against their impact on existing local infrastructure, services and resources and where necessary, new provision should be made as part of the development in order to meet or fund any shortfall.</p>
CS16 - Key community facilities	<p>Proposals for the provision or dual use of key community facilities will be supported, subject to any environmental constraints and other relevant policies. Their loss, reduction or displacement will not be permitted unless it can be demonstrated that they are genuinely surplus and that any replacement accommodation is satisfactory for all of its users.</p> <p>The conversion or redevelopment of residential properties for healthcare and elderly care will not be considered appropriate unless it can be demonstrated that there are no other suitable sites or buildings within the service provider catchment.</p>
CS17 Securing mixed use development	<p>Mixed-development will be sought on major development sites in Borehamwood and Potters Bar town centres and in any other locations capable of satisfactorily accommodating a range of uses. The ability of any site to accommodate a mix of uses will be assessed on:</p> <ul style="list-style-type: none"> i) the need for additional services and facilities in an area; ii) the potential to create linkages with other nearby land uses; iii) public transport accessibility and local road capacity; and iv) the impact on the environment within and around the development site. <p>The Council will work in partnership with local service providers, Parish and Town Councils and local community groups, in order to identify the need for additional services and facilities.</p>
CS18 - Planning tariff and obligations	<p>Provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, will be secured through a fixed tariff on the approval of each new home. The tariff will be set at a suitable level to ensure that the development of new housing does not adversely affect existing facilities and services, having regard to the viability of developing land in the Borough.</p> <p>The provision of affordable housing together with on and off-site facilities, training, services and improvements necessitated by new commercial development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>Specific details on arrangements for securing a planning tariff and planning obligation will be set out in the Planning Tariffs and Obligations</p>

Policy	Description
	Supplementary Planning Document.
CS19 - Accessible buildings	All new development should be designed to ensure that buildings and land within their curtilage are fully accessible to groups with special mobility requirements. 100% of new residential units should be built to the Lifetime Homes Standards highlighted in the Council's Planning and Design Guide Supplementary Planning Document. The proportion of wheelchair accessible homes on new residential redevelopments of 15 or more units will be considered on a site by site basis, having regard to current needs in the Borough.
CS20 - Development and accessibility	To obtain the best use of the existing highway network, major trip generating development should be focused in areas of increased public transport accessibility, as indicated on the Key Map. Major commercial developments will only be permitted where: <ul style="list-style-type: none"> i) it does not conflict with the Transport Objectives of the Hertfordshire Local Transport Plan (2006 – 2011) and associated Accessibility Strategy; ii) it is accompanied by a suitable Travel Plan, prepared in accordance with guidance set out in the Parking Supplementary Planning Document;
	<ul style="list-style-type: none"> iii) it is in accordance with Hertfordshire County Council guidance and relevant Local Plan / Development Plan Document policies relating to the operation of the Highways network and the achievement of vehicular and pedestrian safety; and iv) it contributes, where appropriate, to the provision or funding of new or improved public transport, pedestrian and cycle routes.
CS21 - Accessibility and parking	In order to facilitate fair access to local services, the quantity of off-street parking for all modes of transport, to be provided at new developments, will be based on an assessment of: <ul style="list-style-type: none"> i) a site's location; ii) local car ownership; iii) the proposed land use (having regard to Table 14 for residential development); iv) the Accessibility Zones for the Borough; and v) the provisions of any Travel Plan submitted together with the detailed criteria set out in the Parking Supplementary Planning Document.
CS22 - Promoting alternatives to the car	The Council will support a wide range of measures to provide safe and reliable alternatives to the car for accessing new development and other destinations across the Borough including: <ul style="list-style-type: none"> i) improved public transport facilities; ii) additional public transport routes and stops; iii) enhanced and new non-motorised links within and between urban and rural areas, along or additional to the existing Rights of Way and highways network, which increase walking, cycling or riding opportunities; and iv) the safeguarding of proposed non-motorised routes, where necessary, to prevent development occurring which would prevent their implementation. New developments will be assessed in terms of their accessibility by a range of transport modes and where appropriate, measures to promote alternatives to the car will need to be provided as part of a proposed scheme.

Policy	Description
CS23 - Town Centre Strategy	Development within the designated town, district or neighbourhood centres of Borehamwood, Potters Bar, Bushey and Radlett will be permitted provided that it maintains their primary retail function and wider role as a focus for business, leisure, cultural and other appropriate town centre uses. Proposals to create in excess of 2,500 sq m of new retail floorspace should be focused on Borehamwood and Darkes Lane, Potters Bar town centres and will only be permitted where a clear quantitative need has been established and where it can be demonstrated that it would not harm any existing shopping centre.
CS24 - Strengthening Town Centres	The retail function and vitality of designated centres will be reinforced through the designation of primary and secondary shopping frontages in Borehamwood, Potters Bar, Bushey and Radlett. There will be a focus on (A1) retail uses within the primary frontages and scope for a wider range of activities in secondary frontages, with an emphasis on a mix of (A1) retail, (A2) financial and professional services and (A3) dining-in establishments. An appropriate proportion of other uses will also be permitted in secondary frontages, including (A4) pubs and bars and (A5) take away uses, together with other appropriate town centre uses open to visiting member of the public. Details of frontages and uses will be set out in the Site Allocations DPD.
CS25 - Retail and commercial development in Shenley	<p>Small scale retail and commercial development in Shenley should be restricted to suitable sites within the following, existing commercial areas and as defined in the Shenley Parish Plan:</p> <ul style="list-style-type: none"> • Along London Road in the south east of the village; and • At Andrew Close and the nearby junction between London Road and Porters Park Drive (excluding the reserve school site). <p>Such development should be appropriate in size and scale to the size of the settlement and of a scale which primarily serves the local community rather than drawing in large numbers of visitors.</p>
CS26 - Safe and attractive evening economy	The Council wishes to promote a range of uses in town centres which result in a balanced evening economy including entertainment and late night retailing as well as eating and drinking establishments. The quantity, type and location of A3, A4, A5 and other evening or late night uses will be controlled, having regard to other Local Plan and Development Plan Document policies, together with the aims and objectives of the Crime, Disorder and Drugs Reduction Strategy for Hertsmere. In relation to those areas where concentrations of drinking establishments, night clubs or other evening or late night uses have caused existing anti-social problems, there will be a presumption against further consents for such uses.

Assessment Assumptions and Rationale

- E.1.2 The assessment undertaken relies heavily on professional judgement, which necessarily has an element of subjectivity. It also relies on certain assumptions about changes to people's behaviour as a result of the policies being assessed, the way development will be implemented and the way it will be influenced by other DPDs to be prepared subsequently. The following assumptions were made in the appraisal of the Core Strategy Policies:
- For the purposes of the assessment, the current and future baseline against which effects have been judged is described in Section 3 of the main SA Report and contained in the baseline data sets in Appendix C. It assumes improving levels of health and education, whilst biodiversity, air quality, greenhouse gases, flood risk, the use of previously developed land, countryside quality, traffic congestion, and water infrastructure are predicted to worsen.
 - It is assumed that short term is 0-5 years; medium term is 6-15 years and long term is 16+ years.
- E.1.3 In addition to the assumptions above the assessment was undertaken taking into account the following more detailed decision making criteria outlined in Table E.2. These criteria have been derived from the analysis of other relevant plans and programmes, the broad sustainability objectives and the key sustainability issues for Hertsmere.

Table E.2 - Assessment Rationale

	SA Objective	Assessment Rationale
Social		
1	To improve educational achievement, training and opportunities for lifelong learning and employability	Consideration of whether policies will directly provide educational, training and learning facilities for the local population, or indirectly provide opportunities for learning (e.g. nature trails) or improve accessibility to educational or learning facilities.
2	To ensure ready access to essential services and facilities for all residents	Consideration of whether policies will improve directly or indirectly accessibility to services and facilities through siting, improved transport measures, pedestrian and cycle links, specific community facilities, and open space. Secondary effects such as improved community safety and security measures are also considered.
3	To meet identified housing needs and improve the quality and affordability of housing	Consideration of the extent to which policies will increase or decrease the supply and quality of housing appropriate to local needs and affordability.
4	To reduce poverty and social exclusion and promote equality of opportunities	The extent to which policies sought to improve access to essential facilities such as employment and housing to all sectors in Hertsmere. This includes the effects of locational policies on access, as well as the provision of transportation infrastructure in connecting such locations.
5	To reduce and prevent crime, fear of crime and anti social behaviour	The degree to which policies will reduce crime and the fear of crime through indirect measures such as incorporating design features in new development (such as additional lighting, CCTV) were considered. Direct effect on reducing vehicle, burglary and violent crime rates.
6	To improve population's health and reduce inequalities both geographically and demographically	Consideration of whether policies improve access to health facilities, and indirectly improve health for all. Secondary consideration of reducing air pollution, ensuring homes are of a decent standard, and other indirect or longer-term effects upon health. Secondary effect was also considered of improving walking and cycling infrastructure and the positive effect on improving levels of health.
Environmental		
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	Consideration of the extent to which policies will make the best use of land and buildings. Consideration also be given to indirect effects, such as improving accessibility since this can allow more intensive land uses.

	SA Objective	Assessment Rationale
8	To reduce contamination and safeguard soil quality and quantity	Consideration of how policies will reduce or increase soil contamination and safeguard soil quality and quantity.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	<p>Consideration given to policies that will have a direct effect on designated Conservation Areas, listed buildings, locally listed buildings and their settings.</p> <p>In addition the extent to which there is a sympathetic integration of development on local character will be assessed.</p> <p>Secondary effects will be considered through policies that will reduce the traffic levels in the borough as well as other traffic management measures resulting in positive effects.</p> <p>Assessment of the policies against landscape character areas.</p>
10	To maintain and enhance the quality of countryside and landscape	<p>Consideration of whether policies will seek directly or indirectly, to maintain and enhance the quality of the countryside, greenbelt and open space. Policies will which seek to protect these areas in the short and medium terms will be assessed as having a positive effect.</p> <p>Assessment of the policies against landscape character areas and the extent to which the quality and quantity of the character areas are affected.</p> <p>Potential loss to the quality/quantity of tranquil areas.</p>
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Consideration of the extent to which policies will provide sustainable modes of transport, or promote the use of such modes and restrict the use of cars, by their location, quality of the pedestrian environment, design, or information provision.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	Consideration of whether policies may have a positive or negative effect on internationally and nationally designated sites and locally important habitats and species (either through fragmentation or proximity effects). Additional consideration of whether the policies will result in the conservation, enhancement or creation of habitats.
13	To improve the quality of surface and ground waters	Consideration of whether policies will have positive or negative effects on maintaining and improving the quality of surface and ground waters. Consideration will be given to aspects such as surface water run-off from impermeable surfaces and proximity to water courses.
14	To minimise water consumption	Consideration of whether policies will be efficient in their use of water.

	SA Objective	Assessment Rationale
15	To minimise the risk of flooding taking account of climate change	Consideration of whether policies will have positive or negative effects on tidal and fluvial flood risk. Consideration of whether policies will result in an increase/decrease of flooding and other climate change effects. Consideration of direct or indirect effects on reducing the risk of flooding and other climate change effects, e.g. by using sustainable drainage systems.
16	To improve local air quality	Consideration of whether policies will result in reductions or increases in traffic- and industry- derived pollutant concentrations and carbon dioxide emissions. Predicted changes in road traffic numbers and the effect on the concentrations of certain pollutants (NO ₂ and PM ₁₀). Secondary effect of the use of more sustainable modes of transport, reductions in vehicle use, and changes in industrial activities and locations, leading to improvements in air quality.
17	To reduce greenhouse gas emissions	Consideration of whether policies will result in reductions or increases of greenhouse gas emissions., and to what extent.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	Consideration of whether policies will directly reduce energy demand and incorporate renewable energy. Consideration will also be given to indirect effects, e.g. development located to reduce transport distances.
19	To reduce the generation of waste and encourage re-use and recycling of waste	Consideration of whether policies directly reduce the generation of waste and recycling of waste against standard levels expected for development, e.g. by providing recycling facilities within and near to homes. Consideration will also be given to construction waste reduction, re-use and recycling.
Economic		
20	To provide a prosperous, balanced and stable economy	<p>Consideration of whether policies will support maintaining and extending the range of wealth generating activities, including retail, leisure, recreation and tourism in addition to services, facilities and educational activities.</p> <p>A focus on sustainable development, accompanied by strategies for public transport, community infrastructure and a mix of uses</p> <p>Consideration of whether policies will reduce the number of vacant units and/or add to the diversity of the area.</p> <p>The extent to which policies will require development to be focused in existing urban centres and the expected impact of the policies on the overall quality and attractiveness of the area will be primary considerations.</p>

	SA Objective	Assessment Rationale
21	To sustain and enhance the viability and vitality of town centres	Consideration of whether policies will aim to reduce the number of vacant units and/or add to the diversity of the town centres.

Analysis of Results (November 2006)

- E.1.4 Table E.4 - Table E.10 below present the results of the detailed appraisal of the potential effects of the Core Strategy policies (November 2006) predicted to arise from implementation of the policies. This section presents an analysis of the detailed appraisal in terms of the significance of direct effects and potential cumulative effects and recommendations for improving the sustainability of the policies.
- E.1.5 Table E.3 presents a summary of the significance of direct effects from the detailed appraisal.

General Comments

- E.1.6 Generally, the majority of Core Policies performed well against the sustainability objectives. Several policies were identified which could be improved by revising policy wording, these are discussed below, however, it was clear from the assessment that sustainability issues could be considered in most policies by adding a clear reference within each policy to other relevant policies within the Core Strategy.
- E.1.7 There is no overarching sustainable development policy in the Core Strategy. It is recommended that such a policy is included in the Core Strategy as an overarching policy which guides subsequent policies in the Core Strategy requiring development to be sustainable. The spatial vision objectives to a certain extent fulfil this role, however, they do not cover all the principles of sustainable development.

Recommendation

All development should make a contribution to the overall strategy of the plan and require development to be sustainable. Accordingly all new development should.... [List key principles of sustainable development].

- E.1.8 It is considered that there is a policy missing in this Core Strategy relating to high quality and sustainable design. Design and Sustainable Design / Construction theme was assessed during the options appraisal but has not been transposed into a specific Core Policy and this represents an omission in terms of the sustainability performance of the Core Strategy.
- E.1.9 In any new development, whether commercial or residential, cross referencing policies with CS14 (efficient use of natural resources) should help to ensure that new developments minimise water consumption (SA14), minimise flood risk (SA15) are energy efficient, encourage the use of renewable energy (SA18), reduce the generation of waste and promote measures to encourage re-use and recycling of waste (SA19). In addition, in any new development, designing out crime principles should be encouraged in order to achieve positive effects against objective SA05 in reducing crime and the fear of crime.

Strategic Policies

- E.1.10 There are five strategic policies developed by the Council which set the spatial vision for Hertsmerere and are largely derived from the Council's Community Strategy objectives. In general, the five strategic policies are in line with the SA objectives and therefore perform well in sustainability terms. The spatial policies specifically refer to the CS policies which will need to be implemented to achieve their aims.
- E.1.11 Policy SP1: Improving and sustaining the quality of the local environment is highly compatible with all the environmental objectives achieving positive effects of varying significance.

- E.1.12 Policy SP2 promotes a safe and inclusive environment and as such achieves significant positive effects against SA5 (to reduce crime) as this spatial policy emphasises the creation of safe and secure places.
- E.1.13 Policy SP3 seeks to promote healthier communities and leisure and cultural opportunities therefore is highly compatible with SA objective 6 and is assessed as having positive significant effects.
- E.1.14 Policy SP4 supports proposals which attract commercial investment, maintain economic competitiveness and provided economic development. This policy is highly compatible with objective 20 and is assessed as having significant positive effects. However, this policy requires development and as such, it is recommended that the policy is amended to ensure that any adverse effects on the built and natural environment are avoided, mitigated and/or compensated.

Recommendation

This policy could be improved by adding the following sentence to this policy 'Development proposals should ensure that any adverse effects on the built and natural environment are avoided, mitigated and/or compensated'.

Alternatively, this policy could be improved by adding the following text to the policy 'Development proposals will be permitted, subject to other relevant policies...'.

Also add the following bullets:

- **Protection and Enhancement of the Natural Environment (CS11a)**
- **Protection and Enhancement of the Built Environment (CS11b)**
- **Environmental Protection (CS13)**

- E.1.15 Policy SP 5 refers to meeting local housing needs by supporting house building schemes on sites in sustainable locations with a focus on the main urban areas in line with the settlement hierarchy. The recommendations outlined for SP4 are also applicable to SP5 that there should be a cross reference to the environmental policies to ensure that any adverse effects are avoided, mitigated and/or compensated.

Housing

Core Strategy Policy 1: Location and Supply of New Homes

- E.1.16 This policy set out the spatial location and distribution of residential development in Hertsmere during the plan period to meet the identified housing targets set out in the Draft East of England Plan for the period 2001-2021.
- E.1.17 The policy performed well against the social objectives as by providing housing during the plan period will ensure that housing needs are met. The scale and significance of the positive effects are likely to be confirmed through the Site Allocations DPD when the locations of housing sites are allocated.
- E.1.18 The provision of 4,200 homes in Hertsmere will inevitably have negative effects on the environment. From this assessment negative effects of varying scale and significance were identified against SA Objectives 8 (contamination), 9 (heritage assets), 13 (water quality), 14 (water consumption), 15 (flooding), 16 (air quality) and 17 (greenhouse gas emissions). In addition, long term negative effects were identified against SA10 (countryside) and SA12 (biodiversity) as the Core Strategy identifies a possible need for Greenfield development to meet longer term and higher housing targets.

- E.1.19 Criterion (i) of this policy states that development ‘will take account of environmental constraints’; however, it is considered that this reference to the environment is too weak thus resulting in the negative assessment. It is recommended that in order to mitigate, to a certain extent, the negative effects on the environment, this policy should cross reference with the environmental policies notably CS11, CS13 and CS14.

Recommendation

It is recommended cross referencing this policy to other relevant policies specifically citing Policies CS11 (protection and enhancement of the natural and built environment), CS13 (environmental impact of development) and CS14 (efficient use of natural resources).

Core Strategy Policy 2: The Phasing of New Development

- E.1.20 This policy seeks to facilitate a sustainable rate of house building within the Borough under the terms of Policy CS1. The assessment of this policy against the environmental objectives mirrored that of the assessment of CS1 and as such, the recommendations outlined above are applicable also to CS2.
- E.1.21 A phased programme for housing in Hertsmere is likely to ensure the delivery of sustainable communities across Hertsmere and ensure that infrastructure is in place to reduce the burden on existing infrastructure and therefore is assessed as having overall positive effects on the relevant social objectives (2, 3 and 4) and economic objective 20 (stable economy). As with CS Policy 1, the scale and significance of the positive effects are likely to be confirmed through the Site Allocations DPD when housing sites will be identified.

Core Strategy Policy 3: Affordable Housing

- E.1.22 This policy has been identified as having positive significant effects against two of the SA social objectives. The significantly positive effects related to affordable housing provision helping to tackle poverty and social exclusion (SA04), providing affordable housing in accessible locations and providing sufficient housing that is affordable (SA03).
- E.1.23 It is recommended, for clarity, that a cross reference to other policies is included in the policy text.

Recommendation

“New housing will be subject to other relevant policies.....”

Core Strategy Policy 4: Affordable Housing in rural areas on exception sites

- E.1.24 As above. In addition, a recommendation was made in the options appraisal which has not been taken on board in the preferred policy wording. It is suggested that reference to the protection of the natural and built environment should be included in this policy in order to achieve positive effects against the environmental objectives and improve its overall performance.

Recommendation

This policy could be improved by adding the following additional sentence ‘...should not exceed the level of need identified or have adverse effects on the natural and built environment’.

Alternatively this policy should be cross referenced to other relevant policies specifically citing Policies CS11 (protection and enhancement of the natural

and built environment), CS13 (environmental impact of development) and CS14 (efficient use of natural resources).

This policy could be improved by adding the following text 'Exception sites should be small in scale in relation to the size of settlements, and will be subject to

Core Strategy Policy 5: Gypsies and Travellers

- E.1.25 A range of positive and negative but not significant effects were identified in the assessment of this policy. Policy 5 is a criteria based policy and it is recommended that to improve the performance of this policy specific reference is made to avoiding specific nature conservation designated sites and important habitats, flora and fauna and specific heritage assets rather than just 'safe and acceptable environmental conditions'. This policy at present is reactive rather than proactive in its range of criteria for the protection of the environment. It was recommended that additional criteria should be added to ensure that sites for additional encampments take into consideration nature conservation (SA12), landscape (SA10) and heritage assets (SA9) and that the adverse effects identified on the built and natural environment are avoided, mitigated and/or compensated.

Recommendation

The following additional criterion to this policy when selecting additional or extended sites should be added:

- *The potential risk of flooding or the ability to mitigate this risk (SA objective 8)*
- *To ensure that any adverse effects on the built and natural environment are avoided, mitigated and/or compensated'.*

Alternatively this policy should be cross referenced to other relevant policies specifically citing Policies CS11 (protection and enhancement of the natural and built environment), CS13 (environmental impact of development) and CS14 (efficient use of natural resources).

- E.1.26 Against SA objective 2 (accessibility), the policy is assessed as having overall positive effects as one of the criteria in this policy for the location of sites is for sites to be 'within a reasonable proximity to key local services' which should ensure access to services and facilities for this section of the community. The scale and significance of the positive effects will be confirmed through the Site Allocations DPD.

Core Strategy Policy 6: Housing Mix

- E.1.27 This policy set out the proposals for housing in terms of size, type and tenure and providing an appropriate mix of dwellings to meet these needs. This policy was highly compatible with objectives SA3 (housing) and SA4 (poverty and social exclusion) thus achieving positive but not significant effects.
- E.1.28 Criterion (i) of this policy seeks developers to ensure that 100% of new homes are built to Lifetime Homes Standards which also achieves positive effects in improving accessibility for the mobility impaired. This policy is a hybrid between CS6 and CS19 (accessible buildings). It was recommended for clarity that these policies were combined.

Recommendation

This policy could be improved in general, by adding the following text to the policy 'Development proposals will be permitted, subject to other relevant policies...'

Economy

- E.1.29 It was recommended that this policy theme was amended to include employment provision given the nature and wording of the policies that follow.

Core Strategy Policy 7: Scale of Distribution of Employment Land

- E.1.30 This policy set out the spatial distribution and location of new employment areas in Hertsmere during the plan period. The extent and location of employment land will be assessed in detail through the Site Allocations DPD which will confirm the amount and location of employment (and housing) to be provided to meet the targets for Hertsmere.
- E.1.31 CS7 provides a detailed criterion based policy for permitting the future release of employment sites where appropriate, as well as protecting key locations for employment development. This presents a balanced policy for protecting the key strategic employment sites but also allowing the release of surplus employment sites (where identified in the Site Allocations DPD) where appropriate. The redistribution of employment sites was assessed as having significant positive effects on economic objective 20 and positive, non-significant effects on objective 21.
- E.1.32 In terms of the environmental objectives a range of positive and negative, but not significant effects, were identified due to the potential negative effects of new development on the environment. This policy was felt to be reactive rather than proactive in its protection of the environment. The negative effects identified could be minimised by adding an additional criterion when assessing the release of employment sites to ensure that adverse effects on the built and natural environment are avoided and/or mitigated/compensated.

Recommendation

This policy could be improved by adding an additional criterion of whether 'any adverse effects on the built and natural environment can be avoided, mitigated and/or compensated'.

Alternatively this policy should be cross referenced to other relevant policies specifically citing Policies CS11 (protection and enhancement of the natural and built environment), CS13 (environmental impact of development) and CS14 (efficient use of natural resources).

Core Strategy Policy 8: Local Significant Employment Sites

- E.1.33 Whilst CS7 seeks to protect existing employment sites, to maintain an adequate supply of business accommodation also requires a degree of protection over non designated employment sites to ensure a supply of smaller sites during the plan period. This was the aim of CS Policy 8. This policy is assessed as having significant positive effects on economic objective 20 as this policy helps to achieve a balanced stable economy.
- E.1.34 This policy was assessed as having a range of minor positive and negative effects on objectives SA2 (accessibility to services), SA11 (reducing reliance on the car and promoting sustainable modes of transport), SA16 (local air quality), and SA17 (reduce greenhouse gases). There was an opportunity through employment to promote initiatives such as car sharing and green travels plans in order to promote alternatives to the car. It is recommended that the performance of this policy

against SA11, SA16 and SA17 could be improved through cross referencing to CS Policy 21 (where it refers to green travel plans) and CS Policy 22 (promoting alternatives to the car) where the Council will support a wide range of measures to provide safe and reliable alternatives to the car for accessing new development.

Recommendation

This policy could be strengthened by adding an additional sentence ‘...any redevelopment of a locally significant employment site for housing or other development will be based on an assessment of the criteria in Policy CS7 and subject to the provisions of Policies CS21 and CS22.

Also, this policy could be strengthened by adding an additional sentence ‘...any redevelopment of a locally significant employment site for housing or other development will be based on an assessment of the criteria in Policy CS7 and subject to other relevant environmental policies notably CS11, CS13 and CS14.

Core Strategy Policy 9: Land Use within Employment Areas

- E.1.35 This policy seeks to protect activities (land use) within designated employment areas limited to office, industrial, warehousing and other class B uses. This policy specifically includes a sentence where any new office development will be ‘subject to meeting environmental and other relevant DPD / Local Plan Policies’ and as such, is assessed as having minimal or no harm to the environment. However, this policy does allow other uses within employment areas such as waste management facilities.
- E.1.36 As the policy was worded, it was assessed as having negative on CS8 (contamination) and SA13 (water quality) due to the potential contamination as a result of allowing waste management activities. This policy should include reference to proposals for other uses to be subject to environmental and other relevant DPD policies as in the first part of this policy.

Recommendation

This policy should be cross referenced to other relevant policies specifically citing Policies CS11 (protection and enhancement of the natural and built environment), CS13 (environmental impact of development) and CS14 (efficient use of natural resources) to ensure that potential contamination is minimised and remediated’.

Alternatively, this policy should include the following additional clause ‘certain other uses will also be permitted, subject to other relevant policies...’

Core Strategy Policy 10: Promoting Film and Television Production in Hertsmere

- E.1.37 This policy was assessed as having positive but not significant effects on the economic objectives. It was assessed as having no effects on the social objectives and is assessed as having positive minor effects environmental objectives SA16 (air quality) and SA17 (greenhouse gases). These positive effects could be maximised through cross referring to CS 21 (where it refers to green travel plans) and CS Policy 22 (promoting alternatives to the car) or specifically state in the conditions required through the Local Development Order (LDO) to improve local air quality by promoting alternatives to the car.

Open Land and Environment

Core Strategy Policy 11: Protection and Enhancement of the Natural and Historic Environment

- E.1.38 This policy presents a reactive rather than proactive approach to the protection and enhancement of the natural and historic environment in the context of development proposals. In the short and medium term this policy wording provides sufficient emphasis to achieve positive significant effects on the majority of environmental objectives namely SA7, SA9, SA10 and SA11. In the longer term however, this policy hints that they may be a requirement for greenbelt release to meet longer term housing targets and as such, this policy in the longer term is assessed as having minor negative effects against objectives 7, 9, 10 and 11. The scale and significance of the negative effects however will be confirmed through the Site Allocations DPD.
- E.1.39 It is recommended that this policy could be strengthened to improve the performance of this policy against the physical and built environment by splitting the policy into 2 separate policies i) protection and enhancement of biodiversity, open space and countryside and ii) protection and enhancement of historic assets. This recommendation was made during the options appraisal stage.

Recommendation

This policy could be strengthened by being more proactive rather than reactive in approach i.e. by not referring specifically to where development proposals can be exceptions to this policy but to the protection and enhancement of the natural and built environment as a whole.

This policy could be strengthened by referring specifically to the environmental assets in Hertsmere rather than 'sites of ecological, geological, historic or archaeological value).

This policy could be strengthened overall by splitting into two separate objectives:

- *Protection and Enhancement of the Natural Environment: all development proposals must conserve and enhance biodiversity, open space, countryside and landscape character....*
- *Protection and Enhancement of the Historic Environment – all development proposals must conserve and enhance the historic environment including Scheduled Monuments, Listed Buildings, Conservation Areas....*

The sustainability performance of CS Policy 11 could be further strengthened through the addition of a reference to capitalising on opportunities for habitat creation and enhancement as an integral part of all development schemes in order for the policy to be more proactive in contributing to biodiversity enhancement.

- E.1.40 From a social perspective, this policy was assessed as having potential negative effects in meeting housing needs (SA02) particularly in the short and medium term as the restrictions in this policy may compromise the ability for Hertsmere to meet its identified regional housing targets. However, this policy does allow the release of some areas subject to specific criteria thus achieving a range of positive and negative effects in the longer term. The scale and significance of the positive/negative effects identified will be confirmed through the Site Allocations

DPD. The assessment concluded overall positive but not significant effects on the economic objectives.

Core Strategy Policy 12: Promoting Recreational Access to the Countryside

- E.1.41 This policy was assessed as having positive effects on SA objectives 2, 5 and 6 as it seeks to promote access to recreational and countryside attractions, potentially reducing the fear of crime through increased natural surveillance and improving health.
- E.1.42 Whilst the policy wording was strong enough to achieve positive effects on the environmental objectives 9 (heritage), 10 (countryside) and 11 (biodiversity), these positive effects were only minor. The policy could be strengthened by additional criteria to improve its overall performance against these objectives.

Recommendation

Criterion ii) should be expanded to include ‘does not harm the character, appearance or openness of the greenbelt, landscape and wider countryside’

This policy could be strengthened by adding an additional criterion to this policy ‘the provision of or enhancement of visitor facilities in the countryside will be encouraged where this:

iv) will ensure that biodiversity is protected and enhanced in accordance with Policy CS 11.

This policy could be improved in general, by adding the following text to the policy ‘Development proposals will be permitted, subject to other relevant policies...’.

CS Policy 12 could be strengthened through the addition of a reference to the need to ensure that the provision of increased accessibility into and through the natural environment does not present a risk to the biodiversity value and intrinsic qualities of such environments.

Core Strategy Policy 13: Environmental Impact of New Development

- E.1.43 This policy is the Council's overarching policy for ensuring environmental considerations such as water, energy, and waste, efficient use of land, air quality, noise and design are taken into account in any new development.
- E.1.44 Whilst the assessment concluded that the policy would have overall positive effects on the environmental objectives, it is considered that the policy as it stands falls short of its potential to minimise harm caused by new development.
- E.1.45 There are a number of improvements that could be made to the policy wording.

Recommendation

This policy could be strengthened to be more proactive rather than reactive with regard to flooding and criterion ii) should be reworded to ‘no development in the floodplain unless flood prevention/mitigation measures are in place as required by the Environment Agency’

- E.1.46 This was the preferred policy option during the SA options appraisal.
- E.1.47 Principally, the weakness of the policy in sustainability terms was attributed to the phrasing – it expressed a commitment only and does not provide any tangible indication of how the policy will be achieved in terms of actions. As such, a recommendation was made to seek to strengthen the policy approach.

- E.1.48 It was recommended that CS policies 13 and 14 were combined into one policy relating to 'Environmental Protection' in order to improve the sustainability performance of both policies, to encompass all environmental considerations for new development in one policy and to make the policy more proactive than reactive in the sustainable management of natural resources

Recommendations

The Council will work with key partners, including the Environment Agency and Natural England, to ensure that development proposals do not create an unacceptable level of risk from the impact of natural forces or human activity on occupiers of the site, the local community and the wider environment. In addition, development proposals should take account of sustainability principles. All new development proposals will be required to minimise adverse impact on the environment and ensure prudent use of natural resources by:

- i) Reducing the emissions of greenhouse gases and adapting to the potential adverse effects of climate change;*
- ii) Avoiding development in the floodplain unless flood prevention/mitigation measures are in place as required by the Environment Agency;*
- iii) Promoting the use of Sustainable Urban Drainage Systems (SUDS);*
- iv) Ensuring that all new developments minimise pollutants (including emissions to air, water, soil, light and noise);*
- v) Encouraging the remediation of land affected by contamination;*
- vi) Encouraging carbon neutral developments in appropriate locations;*
- vii) Not permitting development in areas that required safeguarding to protect mineral resources or best and most versatile agricultural land (Grades 1, 2 and 3a);*
- viii) Ensuring efficient use is made of natural resources through their layout, design and construction;*
- ix) Achieving reduced levels of energy consumption and the use of energy from renewable resources;*
- x) Ensuring that developments larger than 1,000 sqm or 10 new homes will be required to include measures to off set 10% of total predicted carbon emissions in line with an energy assessment;*
- xi) Minimising water consumption through measures such as water saving devices;*
- xii) Making provision for waste minimisation and recycling within the development;*
- xiii) Encouraging the use of low embodied energy materials from sustainable sources and materials from local sources and suppliers;*
- xiv) Encouraging that developments achieve BREEAM / Ecohome 'very good' or 'excellent' category.*

Development proposals must demonstrate that they are in accordance with Policy CS11 and any adverse effects can be overcome by appropriate alleviation and mitigation, which are capable of being secured through planning conditions or an obligation in accordance with Policy CS18.

Core Strategy Policy 14: Efficient Use of Resources

- E.1.49 See above assessment of CS13.

Building Sustainable Communities

Core Strategy Policy 15: Access to Services

- E.1.50 A key policy aim of the Core Strategy is to ensure that local infrastructure and service providers' needs are addressed when considering new development and this is the objective of CS Policy 15. This policy was assessed primarily as having effects against the majority of the social objectives. This policy will assess new proposals against their impact on local infrastructure and services and new provision will be encouraged in order to meet or fund any shortfall. As such, this policy was assessed as having positive effects on SA1 (the extent to which new [provision will comprise educational facilities), SA2 (ensuring fair access to services), SA5 and SA6 (through the provision of new community facilities).
- E.1.51 To strengthen the performance of this policy reference to CS Policy 18: Planning tariffs and obligations should be made more explicit in this policy. The scale and significance of the effects identified will be dependent on the successful implementation of CS18 and will be confirmed through the Site Allocations DPD.

Recommendation

This policy could be strengthened by adding the following text to the policy '...new provision should be made as part of the development in order to meet or fund any shortfall in accordance with the provisions of Core Strategy Policy 18.

Core Strategy Policy 16: Key Community Facilities

- E.1.52 This policy was assessed primarily as having effects against the majority of the social objectives. Positive effects are achieved against SA01 and SA02 however, this policy does not stipulate the type of community facilities which will be supported through this policy (only in the supporting text). The positive effects may be greater if the specific community facilities are referred to in the policy wording.
- E.1.53 The scale and significance of the effects identified will be dependent on the successful implementation of CS18 and will be confirmed through the Site Allocations DPD.

Recommendation

This policy could be strengthened by adding the following text 'proposals for the provision or dual use of key community facilities such as educational and training facilities, health care and recreational facilities...

This policy could be improved by adding an additional sentence 'the provision for new community facilities will be sought through Core Strategy Policy 18: Planning tariffs and obligations'.

This policy could be improved in general, by adding the following text to the policy 'Development proposals will be permitted, subject to other relevant policies...'

Core Strategy Policy 17: Securing Mixed Use Development

- E.1.54 The promotion of mixed use development is the main aim of government planning policy (PPS1). The assessment of mixed use developments is similar to the assessment of any development and whilst this policy was assessed as having overall positive but not significant effects on the social and economic objectives,

this policy was assessed as having a mix of negative and positive effects on the environmental objectives.

- E.1.55 The main conclusions from this assessment is that criterion iv) of this policy 'the impact on the environment within and around the development site' needs to be strengthened in order to off-set to a certain extent, the negative effects identified and maximise the positive effects.
- E.1.56 Principally, the weakness of the policy in sustainability terms, is attributed to the phrasing and what is meant by reference to the 'environment'.

Recommendation

The definition of 'environment' in criterion iv) should be strengthened by specifically referring to the impact of proposals on the historic environment, landscape character, countryside, biodiversity, air quality, water, soil, flooding.

Alternatively this policy should be cross referenced to other relevant policies specifically citing Policy CS11 (protection and enhancement of the natural and built environment), and the newly worded Policy CS13 (Environmental protection).

Core Strategy 18: Planning Tariffs and Obligations

- E.1.57 This policy seeks to outline how Hertsmere intends to fund sustainable communities through planning tariffs and obligations imposed on new development. This policy presents a proactive approach to achieving benefits for the community and the environment through developer contributions and as such, was assessed in general as having positive effects on the SA objectives of relevance.
- E.1.58 With regard to reference to affordable housing in this policy, it is not considered appropriate to refer to affordable housing in this policy and it is recommended that this is deleted as Core Strategy 4 provides a separate policy and presents a stronger control over the provision of affordable housing.
- E.1.59 The scale and significance of the effects identified will be confirmed through the Planning Tariffs and Obligations DPD.
- E.1.60 Some minor negative effects were identified against the environmental objectives and as such, it is recommended that this policy cross refers to the newly worded CS13: Environmental Protection.

Recommendation

This policy could be improved in general, by adding the following text to the policy 'Development proposals will be permitted, subject to other relevant policies...'

Core Strategy Policy 19: Accessible Buildings

- E.1.61 See assessment of CS Policy 6 - Housing Mix. It is recommended that this policy is deleted and is merged with CS6 or vice versa. However, reference to the Council's Planning and Design SPD should remain and well as the general essence to provide accessible buildings.

Transport Policies

Core Strategy Policy 20: Development and Accessibility

Core Strategy Policy 21: Accessibility and Parking

Core Strategy Policy 22: Promoting Alternatives to the car

- E.1.62 For the SA, the above transport and parking policies were combined into one assessment. The key aim of Hertsmere's transport strategy is the development of accessible zones however; a key diagram outlining the location of the accessibility zones was not available for this assessment.
- E.1.63 The transport and parking policies as a whole were assessed as having positive effects on improving accessibility (SA02) and improving health through seeking alternatives to the car (SA06). These policies were assessed as having positive effects on objective SA11 as with reference to travel plans, creation of accessible zones, and promoting alternatives to the car, this is highly complementary with this objective. Potential positive significant effects were identified if there is a modal shift to more sustainable modes of transport which will depend on the extent and nature of proposals. The extent of the positive effects will be dependent on the measures outlined in the review of Hertfordshire's Local Transport Plan.

Recommendation

This policy could be strengthened in general by referring to the promotion of an overall sustainable transport strategy.

Town Centre Policies

CS23: Town Centre Strategy

CS24: Strengthening Town Centres

CS25: Retail and commercial development in Shenley

CS26: safe and attractive evening economy

- E.1.64 For the SA, the town centres policies were combined into one assessment. The town centre policies provide a balanced town centre strategy allowing appropriate size and scale retail and commercial units in line with the settlement hierarchy. As such, these policies were assessed as achieving positive effects against SA objectives 2 and 5 and also environmental objectives 16 (air quality) and 17 (greenhouse gases) through the creation of accessible zones (in combination with the transport policies). Significant positive effects are assessed against the economic objectives as this policy strongly supports the development of diverse town centres. There were no recommendations to improve the sustainability performance of these policies.

Table E.3 - Summary of the Appraisal of the Core Strategy (November 2006)

		SP1: Improving Local Environment	SP2: Safe and Inclusive Environment	SP3: Promoting Healthier Communities	SP4: Employment Opportunities	SP5: Meeting Local Housing Needs	CS1: Location and Supply of new homes	CS2: Phasing of Housing Development	CS3: Affordable Housing

Table E.4 - Strategic Spatial Policies

Policy SP1 Improving and sustaining the quality of the local environment	<p>The use and development of all land will be assessed against the need to protect and enhance the natural and built environment, including the diverse character and local distinctiveness of the Borough. Development should take place within the environmental capacity of its locality and in proportion to its location within the hierarchy of settlements in the Borough. Development will be required to maximise the conservation of land, energy and resources and should be designed to a high standard, taking advantage of opportunities to improve the character and quality of an area.</p> <p>This is to be achieved through the careful management of the natural and built environment, close liaison with the Environment Agency and Natural England and the implementation of policies which reflect the principles of sustainable development. These policies will require development to be well located and focused on previously developed land wherever possible, reflecting the settlement hierarchy in the Core Strategy. Policies will be required which cover:</p> <ul style="list-style-type: none"> • Protection and enhancement of natural and historic assets (Policy CS11) • Environmental Impact of Development (Policy CS13) • Efficient Use of Natural Resources (Policy CS14) • The location and supply of new homes (Policy CS1) • Scale and Distribution of Employment Land (Policy CS7) • Development and Accessibility (Policy CS20) <p>Together with more detailed design and amenity policies in the Site Allocations and Development Control Policies DPDs</p>
---	---

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term

0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effect	0	0	0	n/a	
2	To ensure ready access to essential services and facilities for all residents	No obvious effect	0	0	0	n/a	
3	To meet identified housing needs and improve the quality and affordability of housing	No obvious effect	0	0	0	n/a	
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effect	0	0	0	n/a	
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effect	0	0	0	n/a	
6	To improve population's health and reduce inequalities both geographically and	No obvious effect	0	0	0	n/a	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	demographically						
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	Making efficient use of land should have a slight positive long term effect on maximising the conservation of land	+	+	+	Not required as positive	
8	To reduce contamination and safeguard soil quality and quantity	Protecting and enhancing the natural environment should have a moderate long term positive effect on reducing contamination and safeguarding soil quality	++	++	++	Not required as positive	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	Protection and enhancement of the natural and built environment should have a strong long term positive effect.	+++	+++	+++	Not required as positive	
10	To maintain and enhance the quality of countryside and landscape	See assessment for objective 9	+++	+++	+++	Not required as positive	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	The emphasis on protecting the natural environment and maximising energy use in the policy should have a slight positive long term effect.	+	+	+	Not required as positive	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	See assessment for objective 9	++	++	++	Not required as positive	
13	To improve the quality of surface and ground waters	See assessment for objective 9	+	+	+	Not required as positive	
14	To minimise water consumption	As developments will be required to maximise the conservation of resource, this should have a moderate long term positive effect	++	++	++	Not required as positive	
15	To minimise the risk of flooding taking account of climate change	See assessment for objective 9	+++	+++	+++	Not required as positive	
16	To improve local air quality	See assessment for objective 9	++	++	++	Not required as positive	
17	To reduce greenhouse gas emissions	The requirement for developments to maximise the conservation of energy should have a slight positive long term effect	+	+	+	Not required as positive	
18	To minimise the need for	See assessment of objective 17	+++	+++	+++	Not required as positive

			ST	MT	LT		
	energy, increase energy efficiency, and to increase the use of renewable energy						
19	To reduce the generation of waste and encourage re-use and recycling of waste	The requirement for developments to maximise the conservation of energy and resources should have a slight positive long term effect	+	+	+	Not required as positive	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Protection of the natural environment and requirements to maximise the conservation of energy and resources should have a slight positive long term effect.	+	+	+	Not required as positive	
21	To sustain and enhance the viability and vitality of town centres	The overall aim of the policy should have a slight positive long term effect	+	+	+	Not required as positive	

Policy SP2 A Safe and Inclusive Environment	<p>elopment will be required to create places which are safe and secure, thereby reducing crime and the fear of crime. To achieve this, development will also be expected to contribute to the promotion of social inclusion by ensuring accessibility of key services to all sections of the community, including those with reduced levels of mobility.</p> <p>This is to be achieved through close liaison with Hertfordshire Constabulary on key development proposals, the careful management of town centre uses and the incorporation of secure by design principles in new development. The creation of a safer environment will require measures to promote social inclusion, including the safeguarding of key local services and the location and design of new facilities where they can be accessed by all sections of the community who need to use them. Policies will be required which cover:</p> <p>Safe and Attractive Evening Economy (Policy CS26) Access to Services (Policy CS15) Key Community Facilities (Policy CS16) Accessible buildings (Policy CS19) Development and Accessibility (Policy CS20) Together with more detailed design and security policies in the Site Allocations and Development Control Policies DPDs</p>

Table E.5 - Housing Policies

Policy CS1 – the Location and Supply of new Homes	<p>The Council will make provision for 4,200 new homes (at an average annual housebuilding rate of 210 homes) in accordance with the requirements of the draft East of England Plan for the period 2001 – 2021 or any higher housing target set in the final Plan, up to a maximum of 5,000 new homes. In providing for a target of 4,200 homes and identifying new locations for development, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints; II) the density of the surrounding area; III) the need to retain existing housing; IV) the need to locate new development in the most accessible locations; V) the settlement hierarchy identified in the Hertsmere Core Strategy; and VI) the need to locate development within the boundaries of existing built-up areas. <p>The identification of land beyond existing built-up areas for any increased housing target, should continue to be based on criteria (i) to (v).</p>
---	--

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	n/a.	
2	To ensure ready access to essential services and facilities for all residents	The focus in this policy to constraint new homes within existing housing areas or in the most accessible locations will ensure to a certain extent that housing is sited in areas	++	++	++	None required as positive.	The scale and significance of these effects are likely to be confirmed through the Site Allocations DPD

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		where services and facilities are accessible. These positive effects are likely to be permanent, long term and significant.					when the location of housing sites is allocated. By locating new developments in existing areas and in most accessible locations, it is likely that these areas are already well served by key services, and located within distance of transport links and employment opportunities.
3	To meet identified housing needs and improve the quality and affordability of housing	An additional 4,200 homes over the plan period at a build rate of 210 is greater than the existing allocation and build rate and as such the policy should assist in enabling identified housing needs to be met. These positive effects are likely to be permanent, long term and significant. Identifying the need in this policy to retain existing housing will also support this objective.	++	++	++	None required as positive.	The scale and significance of these effects are likely to be confirmed through the Site Allocations DPD when the location of housing sites is allocated.
4	To reduce poverty and social exclusion and promote equality of opportunities	By allocating sufficient sites to meet this target of 4,200, the policy should help to ensure that land is available to provide the requisite amount of new homes which should help to combat poverty and provide greater equality of housing opportunities. The scale and significance of the positive effects will depend on the location of the allocated housing sites but effects are likely to be permanent and long term.	++	++	++	None required as positive.	The Site Allocations DPD will identify the housing sites and as such, will confirm the scale and significance of the positive effects and will depend on the extent to which allocated sites are included in areas of deprivation.
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	None required as positive.	Designing out crime should be encouraged for all new housing developments.
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0	n/a	
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The policy is likely to have a positive effect by focussing development initially on brownfield sites in Borehamwood, Potters Bar and Bushey. Additionally, the approach of redistributing some vacant or potentially vacant employment land, accepting some house building within existing residential areas at densities closer to 40 homes per hectare, and accepting some house building within existing residential areas with an average of 1.5 parking spaces will contribute towards making the most efficient	++	++	++/-	If the East of England Plan adopts a higher housing target a negative effect on developing greenfield sites is largely unavoidable, as the current policy provides a strong emphasis on making the best use of previously developed land and buildings and long term negative effects may be unavoidable (assuming a higher housing target is adopted).	Scale of effect is dependent upon the final housing target set in the East of England Plan for Hertsmere (see assessment of CS2 – phasing of development). Recommendation: suggest cross referencing in this policy to other policies notably CS11 and CS13

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		use of previously developed land. There is a degree of uncertainty for the potential for negative effects through the requirement to develop on greenfield sites. This is largely in relation to the final housing target set under the East of England Plan for Hertsmere. Under the preferred policy of 4,200 homes, there would be no requirement to develop greenfield sites, however if the East of England Plan adopts a higher target, there would be a requirement to develop greenfield sites beyond those sites identified in scenario 2 of the Urban Capacity Study. The potential for a negative effect is related to the housing targets contained in the Final East of England Plan, however there remains the possibility for negative effects in the long term.				(See assessment of CS2 – phasing of development).	
8	To reduce contamination and safeguard soil quality and quantity	Provision of 4,200 homes in the borough, may have short term negative effects if contaminated land is disturbed. However once identified this land has been remediated this should lead to long term positive effects.	-	+	+	Mitigation to restore identified contaminated land. The positive effects are likely to be realised through cross-reference to CS13 which seeks to ensure that sites are free from contamination.	Recommendation: suggest cross referencing in this policy to other policies notably CS11 and CS13
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	There is potential for this policy to have a negative effect on historic buildings through increased residential densities in existing areas in the short to medium term, and on landscape character, archaeological sites and cultural features in the long term through greenfield development. However, these effects may be adequately mitigated by Policy CS11. The scale of effect is largely dependent on the detailed implementation of Policy CS11.	-	-	--	Dependent upon the implementation of Policy CS11 'Protection And Enhancement Of The Natural And Historic Environment'.	Recommendation: suggest cross referencing in this policy to other policies notably CS11 and CS13
10	To maintain and enhance the quality of countryside and landscape	See assessment of SA objective 9 above. There is a potential for a negative effect in the long term through the potential need for greenfield development to meet higher housing targets, with a potential negative effect on the quality of the countryside and landscape. The effects may be adequately mitigated by Policy CS11; however this would be largely dependent on the detailed implementation of this policy.	0	0	--	Dependent upon the implementation of Policy CS11 'Protection And Enhancement Of The Natural And Historic Environment'. Additional mitigation may be required in providing additional areas of natural greenspace that may be lost, such as through the provision of Country Parks.	Scale of effect is dependent upon the final housing target set in the East of England Plan for Hertsmere. Recommendation: suggest cross referencing in this policy to other policies notably CS11.
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Provision of housing in key settlements in Hertsmere may reduce the need to travel particularly when located in the most accessible locations and by having housing and key services/facilities in one area. This should have minor positive long term effects. However increasing housing will attract more people which will naturally increase the number of cars in the area with a long term minor negative effect.	+/-	+/-	+/-	Provision of adequate/appropriate additional public transport routes and services to encourage the use of public transport. Possible consideration of car clubs in new housing estates when private car use is still needed. Successful implementation of CS21 which seeks to assess new developments a number of criteria including details of travel plans should minimise negative effects of new	Recommendation: suggest cross referencing in this policy to other policies notably CS11, CS13 and CS21

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
						development.	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	See assessment of SA objective 9 above. There is a potential for a negative effect in the long term through the potential need for greenfield development, with a potential negative effect on the quality on undesignated habitats. The effects may be adequately mitigated by Policy CS11; however this would be largely dependent on the detailed implementation of this Policy.	0	0	-	Non-designated wildlife habitats may be lost through greenfield development, although this is dependent upon the implementation of Policy CS11 and detailed policies within the Development Control Policies DPD.	Recommendation: suggest cross referencing in this policy to other policies notably CS11, CS13 and CS21
13	To improve the quality of surface and ground waters	Additional housing will create more waste water with the possibility of having a minor negative effect on both surface and groundwater in the long term. During construction of houses there maybe an increased negative effect in the short term of groundwater contamination from surface run off However Policy CS13 'Environmental Impact of Development' may reduce this effect, although the degree to which this occurs will be dependent upon the implementation of this policy. However, a negative residual effect is likely.	--	-	-	Use of SUDS to reduce possible effects from increased housing. Mitigation measures during construction to minimise or eliminate contaminated surface run off. See assessment of CS14.	Recommendation: suggest cross referencing in this policy to other policies notably CS13 and CS14.
14	To minimise water consumption	Additional housing will increase water consumption with a long term negative effect. However Policy CS14 "Efficient Use of Natural Resources" may reduce consumption although the degree to which this occurs will be dependent upon the implementation of this policy. However, a negative residual effect is likely.	-	-	-	All new development should aim to minimise water consumption through the provision of water saving devices such as meters or grey-water recycling schemes which should be included as detailed policies within the Development Control Policies DPD.	Recommendation: suggest cross referencing in this policy to other policies to minimise the negative effects of additional housing development on the environmental objectives.
15	To minimise the risk of flooding taking account of climate change	Additional housing; increased waste water production and impermeable surfaces created through new development will increase flood risk with a long term negative effect. However Policy CS13 'Environmental Impact of Development' may reduce this risk, although the degree to which this occurs will be dependent upon the implementation of this policy. However, a negative residual effect is likely.	-	-	-	Policy CS13 'Environmental Impact of Development' is likely to go some way towards mitigating the additional risk of flooding. See assessment of Core Policy CS13	New housing in green belts is likely to have a much greater effect on flood risk as natural flood patterns and water movement will be disturbed. In previously developed land flood patterns and water movement have already been altered to some extent.
16	To improve local air quality	Additional housing with increased energy demand and more vehicle movement will have a negative effect on air quality in the long term. During construction of new housing there will be further short term negative effects on air quality from the disturbance of soil, dust formation and emissions from construction traffic.	--	-	-	Mitigation measures to reduce the effects of construction on air quality in the short term. Policy CS14 "Efficient Use of Natural Resources" is likely to go some way towards mitigating the effects on air quality. See assessment of Core Policy CS14.	Recommendation: suggest cross referencing in this policy to other policies notably CS13 and CS14.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		However CS14 "Efficient Use of Natural Resources" may reduce the impact on air quality through including reference to BREEAM and Building Futures, although the degree to which this occurs will be dependent upon the implementation of this policy. However, a negative residual effect is likely.					
17	To reduce greenhouse gas emissions	Additional housing with increased energy demand and increased traffic volumes will have a negative long term effect. However CS14 "Efficient Use of Natural Resources" may reduce greenhouse gas although the degree to which this occurs will be dependent upon the implementation of this policy. However, a negative residual effect is likely.	-	-	-	CS13 "Environmental Impact of Development" is likely to go some way towards mitigating the effects on air quality. See assessment of Core Policy CS13.	Recommendation: suggest cross referencing in this policy to other policies notably CS13 and CS14.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	Additional housing will increase the need for energy with a negative effect, however Policy CS13 'Environmental Impact of Development' may reduce this demand, although the degree to which this occurs will be dependent upon the implementation of this policy. However, a negative residual effect is likely.	-	-	-	Policy CS13 'Environmental Impact of Development' is likely to go some way towards mitigating the additional demand for energy. See assessment of Core Policy CS13. CS14 also refers to supporting the development of on-site renewable energy schemes which could support increasing the use of renewable energy.	Recommendation: suggest cross referencing in this policy to other policies notably CS13 and CS14.
19	To reduce the generation of waste and encourage re-use and recycling of waste	Additional housing will increase waste generation; however Policy CS13 'Environmental Impact of Development' may reduce the amount of waste generated, although the degree to which this occurs will be dependent upon the implementation of this policy. However, a negative residual effect is likely.	-	-	-	Policy CS13 'Environmental Impact of Development' is likely to go some way towards mitigating increased waste generation. See assessment of Core Policy CS13.	Recommendation: suggest cross referencing in this policy to other policies notably CS13 and CS14.
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Additional house building is likely to have direct minor positive effects through providing additional employment in the house building industry. The effect is likely to be long term as a yearly supply of housing is required through this policy.	+	+	+	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	No obvious effects.	0	0	0	n/a	

Policy CS2 - Phasing of Housing Development	<p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policy CS1, the Council will make provision for:</p> <ul style="list-style-type: none"> - Up to 656 additional new homes to be permitted in Phase 1 between April 2006 and March 2011 (equivalent to 219 homes per year) - Up to 848 additional new homes to be permitted in Phase 2 between March 2011 and April 2016 (equivalent to 283 homes per year) - Up to 841 new homes to be permitted in Phase 3 between March 2016 and April 2021 (equivalent to 280 homes per year) <p>Should a total housing target of 5,000 homes be set in the East of England Plan, additional sites should be identified in the Site Allocations DPD to enable the provision of a further 103 homes in Phase 2 and 462 homes in Phase 3.</p> <p>Housing sites will be phased on this basis in the Site Allocations DPD to facilitate the required levels of housebuilding sought in the East of England Plan. Based on the findings of the Annual Monitoring Report, allocated land in later phases will be brought forward, where necessary, to maintain the five year supply of land for housing. In order to prevent the overdevelopment of housing in the Borough, the phasing and release of land allocated in the Site Allocations DPD will be reviewed where the number of units permitted on different sites, over any period of three years, significantly exceeds the maximum amounts sought over that period under the terms of this policy. Should the total East of England Plan housebuilding requirements be met during the Plan period, further residential development will not be permitted in the Borough where it results in the net development of more than 15 new units.</p>
---	--

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term

			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	None required.	
2	To ensure ready access to essential services and facilities for all residents	A phased programme for housing in Hertsmere is likely to ensure the delivery of sustainable communities across Hertsmere ensuring that infrastructure is in place to reduce the burden on existing infrastructure and community facilities which is likely to occur with new housing development. The positive effects are likely to be permanent and occur in the short, medium and long term through the managed release of housing	++	++	++	None required.	The availability of supporting infrastructure and the need to provide additional capacity in some locations will determine the timing of the release of housing sites.

SA Objectives	Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
		ST	MT	LT		
	during the plan period.					
3	To meet identified housing needs and improve the quality and affordability of housing	A phased programme for housing delivery in Hertsmere is likely to meet the short and medium term requirements for housing in the borough through existing local plan allocations and identified sites in the urban capacity study. In the short and medium term the effects are likely to be positive and permanent. In the longer term, when regional housing targets are exceeded, the Council will restrict the amount of new housing and as such, may result in negative effects for future housing needs.	++	++	-	This objective will be monitored through the AMR. The availability of supporting infrastructure and the need to provide additional capacity in some locations will determine the timing of the release of housing sites. The Council will monitor housing trajectory on an annual basis through its Annual Monitoring Report and will provide up to date information to inform the five year housing supply in Hertsmere.
4	To reduce poverty and social exclusion and promote equality of opportunities	A managed release of housing should enable housing allocation sites to take account of areas of deprivation and use housing development as a catalyst for promoting equality of opportunities for housing. The availability of supporting infrastructure and the need to provide additional capacity for community facilities prior to the release of housing may also combat poverty and social exclusion. In the short and medium term the effects are likely to be positive and permanent. However, when regional housing targets are exceeded, the Council will restrict the amount of new housing and as such, may result in negative effects on deprivation in the longer term.	++	++	-	This objective will be monitored through the AMR. The Site Allocations DPD will identify the housing sites and as such, will confirm the scale and significance of the positive effects which will depend on the extent to which allocated sites are included in areas of deprivation.
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	Designing out crime should be encouraged in new housing developments. Designing out crime should be encouraged in new housing developments.
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0	n/a
ENVIRONMENTAL						
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	See assessment of Core Policy CS1 'Location and Supply of New Homes'. Positive effects are likely in the short to medium term, however there is potential for a negative effect in the long term. The potential for a negative effect is related to the housing targets contained in the Final East of England Plan, however there remains the possibility for negative effects in the long term.	+	+	+/-	See assessment of Core Policy CS1. This policy is closely linked to Core Policy CS1 in terms of providing new housing development during the plan period but refers to the phasing of the housing.
8	To reduce contamination and safeguard soil quality and quantity	See assessment of Core Policy CS1 'Location and Supply of New Homes'	-	+	+	See assessment of Core Policy CS1. As above.

19	To reduce the generation of waste and encourage re-use and recycling of waste	See assessment of Core Policy CS1 'Location and Supply of New Homes'	-	+	+	See assessment of Core Policy CS1.	As above.
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The policy is likely to have slight positive effect by ensuring a sustainable rate of house building over the plan period enabling stability in the local construction industry. Additionally, phasing of development will allow for adequate supporting infrastructure to be planned and provided for contributing towards a balanced and stable economy.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	No obvious effects.	0	0	0	n/a	

Policy CS3 - Affordable Housing	In order to optimise the supply of affordable housing, developments involving more than 15 residential units, or residential sites of more than 0.5 hectares, should make provision for an element of affordable housing. The proportion of homes on each site which are affordable should comprise 40% of total proposed housing. A lower affordable housing requirement of 35% will be permitted where it can be demonstrated that a higher proportion cannot be realistically accommodated within a site or that it would jeopardise the viability of a scheme. On sites requiring the provision of affordable housing, the Council will seek to maximise the provision of affordable, rented accommodation with at least 75% of affordable homes to be provided in the form of social rented housing, managed through a Registered Social Landlord.
--	--

SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	n/a	
2	To ensure ready access to essential services and facilities for all residents	No obvious effects.	0	0	0	n/a	
3	To meet identified housing needs and improve the quality and affordability of housing	This policy is in line with the Community Strategy for Hertsmere which seeks to optimise the supply of affordable housing in the Borough. This policy should result in increased levels of affordable housing on all qualifying sites (i.e. over 15 units) and through a proportion of homes of each site which are affordable (40% or 35%). As such this approach to affordable housing should meet the identified annual net shortfall of 351 units per year. The effects are likely to be positive, long term and significant.	++	++	++	None required as positive.	<p>The scale and significance of the positive effects will be confirmed through the SPD on Affordable Housing which will provide clarification on where affordable housing requirement will be considered acceptable and clarify arrangements for delivery, funding and implementation of different affordable housing targets.</p> <p>Monitoring of affordable housing units through the development control process and the AMR.</p>
4	To reduce poverty and social exclusion and promote equality of opportunities	The availability of a mix of housing tenure is an important indicator of poverty and quality. This policy is in line with the Community Strategy for Hertsmere which seeks to optimise the supply of affordable housing and also seeks to provide a balanced mix of housing tenure based on identified need. This policy requires on all qualifying sites for a 75%/25% split between social rented and intermediate housing which have been identified through the Housing Needs Study. The effects are likely to be positive, long term	++	++	++	Monitoring of affordable housing units and tenure mix through the development control process and the AMR.	<p>As objective 3.</p> <p>The Site Allocations DPD will identify housing sites and as such, will confirm the scale and significance of the positive effects which will depend on the extent to which allocated sites are included in areas of deprivation.</p>

Policy CS4 - Affordable Housing in rural areas on exception sites	In all identified settlements in the Green Belt, as set out on the Core Strategy Key Diagram, the Council may permit the development of small scale affordable housing schemes as an exception to normal policies. Such schemes should meet the identified needs of people local to the village or settlement, remain affordable in perpetuity and be managed by a Registered Social Landlord. Priority will be given to sites located on previously developed land within settlements and the scale of development should not exceed the level of need identified.

			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	n/a.	
2	To ensure ready access to essential services and facilities for all residents	Indirectly, in allowing small scale affordable housing schemes in rural villages, this may make existing facilities more viable or attract small shops to open which will improve access to these facilities for residents of this villages. The positive effects are likely to be minor and will be dependent on extent of development and location.	+	+	+	None required as positive.	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
3	To meet identified housing needs and improve the quality and affordability of housing	Rural exceptions permitted will be based on identified need for affordable housing in the Housing Needs Survey (Shenley, South Mimms and Elstree). This policy provides a mechanism for delivering affordable housing in rural areas where appropriate so should help to secure the delivery of affordable housing in rural villages and meet the identified housing need. In the longer term as housing targets are met this may result in less positive effects than in the short and medium term as there will be restrictions on overall housing. The positive effects will be dependant on the effective implementation of this policy.	++	++	+	None required as positive.	Recommendation in the options appraisal not taken on board in the preferred policy wording. Suggest additional sentence '...should not exceed the level of need identified or have adverse effects on the natural and built environment'. Alternatively supporting text should refer to a criteria based approach in order to minimise negative effects on the environmental objectives. The scale and significance of the positive effects will be confirmed through the SPD on Affordable Housing.
4	To reduce poverty and social exclusion and promote equality of opportunities	There is an identified affordable housing problem in the smaller settlements of Shenley, South Mimms and Elstree. This policy provides a mechanism for delivery of affordable housing in these rural villages which should help to enable less affluent persons to become engaged in rural communities and promoting greater quality of access to housing. The positive effects will be dependant on the effective implementation of this policy.	+	+	+	None required as positive.	The scale and significance of the positive effects will be confirmed through the SPD on Affordable Housing.
5	To reduce and prevent crime, fear of crime and anti social behaviour	Through permitting small scale residential development in rural villages, this may indirectly result in a reduction in crime or fear of crime through natural surveillance. These secondary positive effects are minor and dependant on the effective implementation of this policy.	+	+	+	None required as positive.	Designing out crime should be encouraged in new housing developments.
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0	n/a

		ST	MT	LT		
	have permanent positive and significant effects.					
5	To reduce and prevent crime, fear of crime and anti social behaviour	++	++	++	None required as positive.	The scale and significance of the positive effects will be confirmed through the Site Allocations DPD.
6	To improve population's health and reduce inequalities both geographically and demographically	++	++	++	None required as positive.	The scale and significance of the positive effects will be confirmed through the Site Allocations DPD.
ENVIRONMENTAL						
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	+/-	+/-	+/-	Policy already emphasises land which has been previously developed. Greenfield development may be unavoidable if demand requires all potential previously developed sites to be utilised.	
8	To reduce contamination and safeguard soil quality and quantity	+/-	+/-	+/-	Policy already emphasises land which has been previously developed. Greenfield development may be unavoidable if demand requires all potential previously developed sites to be utilised.	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	-	-	-	Further site specific mitigation may be required such as landscape bunding and planting or archaeological site evaluation.	An additional criteria should be added to ensure that sites for additional encampments take into consideration the nature conservation, landscape, heritage value of sites (potential to cross reference with CS11) and/or ensure that any adverse effects on the built and natural environment are avoided, mitigated and/or compensated.
10	To maintain and enhance	-	-	-	Further site specific mitigation	As above.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	the quality of countryside and landscape	the potential for development on greenfield land, however the detailed criteria to be considered (including rural amenity and visual intrusion) has the potential to mitigate potential negative effects.				may be required such as landscape bunding and planting. There is the potential for residual effects on the quality of the countryside that may not be able to be mitigated.	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Location of sites in reasonable proximity to key local services may reduce dependence on private car use with a minor positive effect. However the provision of the sites themselves may attract more people and vehicles to the area undermining the original benefit	+/-	+/-	+/-	Provision of public transport links to identified sites	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	There is potential for small scale development of Greenfield sites which has the potential for a negative effect on undesignated habitats. Effects have the potential to be long term and permanent.	-	-	-	Policy could be strengthened to recognise the need of minimising negative biodiversity effects.	Recommendation: Policy could be strengthened by amending 'safe and acceptable environmental conditions' to include the preservation of local biodiversity interests.
13	To improve the quality of surface and ground waters	Provision of authorised sites with appropriate infrastructure to manage water, sewage, drainage and water disposal should have a positive effect However if the site allocation DPD identifies sites on Greenfield land even the provision of such infrastructure could cause disturbance and effects on water quality.	+/-	+/-	+/-	Measures to minimise the effect of development on Greenfield land possibly to include SUDS.	Positive effects of providing infrastructure in authorised sites is compared to unauthorised sites where sewage and other waste maybe discharged directly into water courses
14	To minimise water consumption	Where sites are provided with infrastructure to deliver water, there will be a negative long term effect on reducing water consumption.	-	-	-	Possible for the installation of rain water harvesting and grey water recycling systems to minimise water consumption.	Recommendation: suggest cross referencing in this policy to other policies notably CS13 and CS14.
15	To minimise the risk of flooding taking account of climate change	Provision of sites in previously developed areas should not any additional effect on flood risk. However if the site allocation DPD identifies sites on Greenfield land there will be a negative effect as site development would increase the amount of impermeable surfaces in the area	-	-	-	Development decisions must be guided by the principles of PPS25. Flood risk assessments will be required for the development of sites that lie within flood zones 2 and 3 as defined by the Environment Agency.	Recommendation: suggest cross referencing in this policy to other policies notably CS13 and CS14.
16	To improve local air quality	No obvious effects.	0	0	0		
17	To reduce greenhouse gas emissions	No obvious effects.	0	0	0		
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a

Policy CS6 - Housing Mix	<p>To help meet local housing needs, proposals for new housing should provide an appropriate mix of new homes in terms of housing size and type. Developers should ensure that:</p> <ul style="list-style-type: none"> 100% of new homes on all sites are built to Lifetime Homes standards, with the exception of schemes involving the conversion of existing buildings resulting in six new units or less; Housing developments in excess of 10 units contain sufficient variation within their housing mix, with sites of at least 25 units or 1 hectare reflecting identified variation within the Borough's housing need; and On particularly large development sites, a proportion of sheltered housing is provided as part of the overall housing mix. <p>The Council will seek to identify land, through the Site Allocations DPD, where sheltered housing can be included as part of any future development.</p>

20	To provide a prosperous, balanced and stable economy	Provision of a range of housing mix for different sectors of the community is likely to complement the existing workforce as well as encourage others including those low skilled workers. Effects are likely to minor but permanent.	+	+	+	None required as positive.	
21	To sustain and enhance the viability and vitality of town centres	No obvious effects.	0	0	0	n/a	

Table E.6 - Economic Policies

Policy CS7 - Scale and Distribution of Employment Land	<p>In order to encourage economic development and promote a competitive local economy, provision will be made for the supply of at least xx ha of designated employment land for B-class development within the Borough up to 2021, focused on the following locations and as identified on the Key Diagram:</p> <p>Employment Areas</p> <ul style="list-style-type: none"> ▪ Elstree Way, Borehamwood ▪ Stirling Way, Borehamwood ▪ Cranborne Road, Potters Bar ▪ Station Close, Potters Bar ▪ Otterspool Way, Bushey <p>Key Employment Site</p> <ul style="list-style-type: none"> ▪ Centennial Park, Elstree <p>The boundaries of these locations will be clarified in the Site Allocations DPD including the release of existing sites within these areas for new housing or housing-led mixed-use development where appropriate. Any release of designated employment land for housing-led or mixed-used development, during the plan period, will be based on an assessment of whether:</p> <ul style="list-style-type: none"> i) there is any realistic prospect of that land being developed or occupied for employment purposes during the plan period; ii) the development of a particular site during the plan period would lead to an over-supply of housing; iii) the environmental, locational and physical characteristics of the current site or use are appropriate for continued employment use; iv) an acceptable environment can be provided for housing-led development, including its impact on local traffic levels; v) a housing-led development would prejudice the ability of nearby businesses to operate; and whether vi) the employment land release would prejudice the implementation of the Elstree Way Corridor Planning and Design Brief and other Council economic development and regeneration strategies.

0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning	No obvious effects.	0	0	0		

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	and employability						
2	To ensure ready access to essential services and facilities for all residents	By focusing new employment use in existing established employment areas will ensure accessibility for opportunities for employment in areas of good accessibility. The positive effects are likely to be permanent and be consistent in the short, medium and long term.	++	++	++		In combination with sustainable transport policies (CS20 and 21), opportunities for accessibility are likely to be enhanced significantly. The scale and significance of these positive effects will be confirmed through the SA of the Site Allocations DPD.
3	To meet identified housing needs and improve the quality and affordability of housing	This policy allows for the release of existing employment sites for new housing where appropriate through the Site Allocations DPD. The release of sites would contribute to providing sites to meet identified housing targets and housing needs resulting in overall positive effects. The effects are assessed as being minor and dependent on the findings of the urban capacity study and employment study and the likely shortfall/surplus in both housing and employment uses.	+	+	+		The scale and significance of these positive effects will be confirmed through the SA of the Site Allocations DPD where the boundaries of existing employment and housing sites are identified.
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0		
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0		
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0		
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	Redistribution of land may result in more efficient use of land in general with employment land being situated in suitable areas and vice versa with housing land. This will have a minor positive effect. However, the policy will result in Greenfield release for employment use thus conflicting with this objective with a negative effect.	+/-	+/-	+/-	The amount of greenfield land development is dependent on the demand for new housing and employment land. Negative effects on this objective are unlikely to be mitigated if regional housing and employment targets are to be met.	Development of Greenfield land for new employment uses is dependent on the setting of regional housing and employment growth requirements. In order to meet both housing and employments, as they currently exist, a similar amount of Green Belt land would need to be developed either for employment development or new homes. The scale and significance of these effects will be confirmed through the SA of the Site Allocations DPD where the boundaries of existing employment and housing sites are identified.
8	To reduce contamination and safeguard soil quality and	The loss of poorly located employment sites or sites within housing areas presents the	+/-	+/-	+/-	Mitigation measures during construction and operation to	The scale and significance of the negative effects will be dependent on the scale and nature of

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	quantity	opportunity for decontamination of land and improvements to soil quality locally. The application of CS Policy 13 will allow for remediation of contaminated land. The re-distribution of employment sites will seek to safeguard soil quality and quantity elsewhere. The effect will be positive but not significant.				minimise contamination risk.	contamination if any is found and the successful implementation of CS 13.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The development of additional Greenbelt land for employment use is likely to have a significant negative effect on landscape character and visual openness through the development of Greenbelt sites. The effect is likely to be more pronounced in the medium to long term as additional employment land is required. The effect is likely to be long term and permanent.	-	--	--	Although the key diagram identifies 'areas of search' for new or intensified designated employment land, and that the extension of an Employment Area is likely to be less intrusive than the equivalent expansion of an existing urban or rural area, residual effects would require mitigation. The design of development should reflect the local landscape and historical character, along with measures such as planting, landscape bunding and biodiversity enhancements to minimise negative effects.	<p>The scale and significance of these effects will be confirmed through the SA of the Site Allocations DPD where the boundaries of existing employment and housing sites are identified.</p> <p>The negative effects of new development identified could be minimised by adding an additional criterion to ensure that adverse effects on the built and natural environment are avoided and/or mitigated/compensated. Cross referencing to Core Policy 11 could also help to off set the negative effects identified.</p> <p>Also suggest cross referencing to CS Policy 1: Location and Supply of housing as it is likely in the longer term that these key uses will be competing for land.</p>
10	To maintain and enhance the quality of countryside and landscape	The development of additional Greenbelt land for employment use is likely to have a significant negative effect on the quality of the countryside through the development of Greenbelt sites. The effect is likely to be more pronounced in the medium to long term as additional employment land is required. The effect is likely to be long term and permanent.	-	--	--	See mitigation for SA objective 9.	As above.
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Provision of employment land in settlements should reduce the need for travel between housing and employment. There may be some short term negative effects while routes are established between new employment land and housing and reliance is still partly on the private car. In the medium to long term this should improve resulting in minor positive, permanent but not significant effects.	-/+	+	+	Early development of work travel plans to minimise short term negative effects. Establishment of good, frequent and reliable public transport links.	Cross reference to Core Policy CPTP1 relating to encouraging green travel plans.
12	To protect and enhance wildlife	The development of additional Greenbelt	-	-	-	See mitigation for SA objective 9.	The scale and significance of these effects will be

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	and habitats which are important on an international, national and local scale	land is likely to have a slight negative effect on undesignated habitats through the development of Greenbelt sites. The effect is likely to be long term and permanent.					confirmed through the SA of the Site Allocations DPD where the boundaries of existing employment and housing sites are identified. The negative effects identified could be minimised by adding an additional criterion to ensure that adverse effects of new development on the built and natural environment are avoided and/or mitigated/compensated. Cross referencing to Core Policy 11 could also help to off set the negative effects identified.
13	To improve the quality of surface and ground waters	The redevelopment of poorly located employment sites may result in localised surface water run-off and pressure on existing water treatment systems. The effect will be positive but not significant.	-	-	-	Mitigation measures during construction and operation to minimise pollution risk.	Successful implementation of Core Policies 13 and 14 should help to minimise the effects of new development.
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	Reference to BREEAM offices during design to minimise water consumption. See CS Policy 14.
15	To minimise the risk of flooding taking account of climate change	Development of designated employment land for housing and vice versa is likely to increase pressure on drainage systems and potentially increase the risk of flooding. The effects are likely to be negative and permanent but the significant of the effect will depend on the location and extent of redevelopment of employment sites for housing.	-	-	-	Development decisions must be guided by the principles of PPS25. Developments should also be designed to be capable of withstanding flood events i.e. by identifying appropriate ground and basement floor uses. Flood risk assessments will be required for the development of sites that lie within flood zones 2 and 3 as defined by the Environment Agency.	Successful implementation of Core Policies 13 and 14 should help to minimise the effects of new development.
16	To improve local air quality	Possible reduction in car use and the need to travel due to provision of employment land in established settlements would have a minor positive effect on air quality on a permanent basis. The positive effect if existing areas are of high public transport accessibility. However during construction there maybe some negative effects on air quality in the short term.	+/-	+	+	Measures to reduce any pollution during the construction phase through the implementation/reference to a Construction and Environment Management Plan.	Successful implementation of Core Policy 14 should help to minimise the effects of new development.
17	To reduce greenhouse gas emissions	Possible reduction in car use and the need to travel due to provision of employment land in accessible locations would have a	+	+	+	Not required as effect positive.	Reference to BREEAM office to ensure good design which promotes energy efficiency.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		minor positive effect on reducing greenhouse gas emissions in the long term.					Recommend cross referencing to Core Policy 22 in promoting alternatives to the car and ensuring green travel plans are in place in new development (CS Policy 21) to strengthen policy. Successful implementation of such policies should contribute to this objective.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The redistribution of employment sites on the basis of improving the ease and attractiveness of development (through selective release of sites and greenfield release) should help to increase take up of employment sites for development as well as enabling development of former employment sites for alternative uses. Significant positive effects are likely to be Borough wide.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	The release of constrained employment sites within town centres for alternative forms of development may have benefits for town centre vitality and viability through enabling beneficial development of vacant/under-used sites, for example for housing or leisure uses. Significant positive effects are likely to be permanent.	+	+	+	Not required as effect positive.	

Policy CS8 - Local Significant Employment Sites	In order to sustain a competitive local economy with good access to employment for the local population, the Council will seek to maintain a supply of smaller, business units across the Borough. The Council will work with key partners, including the South West Hertfordshire Business Partnership and local Chambers of Commerce, to identify Local Significant Employment Sites. These sites will comprise economically viable business accommodation over 0.25 hectares with satisfactory access, parking and environmental conditions, for B-class and other identified, employment generating uses. Any redevelopment of a Locally Significant Employment Site for housing or other development will be based on an assessment of the criteria in Policy CS7.

14	To minimise water consumption	No obvious effects.	0	0	0	n/a	
15	To minimise the risk of flooding taking account of climate change	No obvious effects.	0	0	0	n/a	
16	To improve local air quality	Possible reduction in car use and the need to travel due to provision of additional film and television facilities on the same site. This would have a minor positive effect on air quality However during construction there maybe some short term minor negative effects on air quality	+/-	+	+	Measures to reduce any pollution during the construction phase.	Link to Core Strategy Policy 22 which aims to promote alternatives to the car.
17	To reduce greenhouse gas emissions	Possible reduction in car use and the need to travel due to provision of additional film and television facilities on the same site would have a minor positive effect on reducing greenhouse gas emissions	+	+	+	Not required as effect positive.	Link to Core Strategy Policy 22 which aims to promote alternatives to the car.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	By promoting the retention and growth of the film and television production in the borough a major employment generator will be maintained and expanded within the borough with significant positive effects on providing a prosperous, balanced and stable economy.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	By promoting the retention and growth of the film and television production in the borough, particularly in Borehamwood and Elstree, indirect positive effects are likely	+	+	+	Not required as effect positive.	

SA Objectives	Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
		ST	MT	LT		
	to be maintained on sustaining the viability and vitality of the town centre through the demand for services and facilities from the studios. The effect is likely to be long term and permanent.					

Table E.7 - Open Land and Environment Policies

Policy CS13 – Protection and enhancement of the natural and historic environment	<p>All development proposals must conserve and enhance the historic and natural environment, landscape character and bio-diversity in order to maintain and improve environmental quality. Development proposals should be designed to a high quality and not result in significant harm to the openness and appearance of the Green Belt and to identified, protected sites of ecological, geological, historic or archaeological value and will not be permitted unless:</p> <ul style="list-style-type: none"> there is an over-riding need for the development in the public interest which clearly outweighs the conservation value of the site; no suitable alternative sites exists to accommodate the development; adequate mitigation and/or compensatory measures are provided; in the case of the highest quality agricultural land (Grades 1, 2 and 3a) and Preferred Areas of mineral extraction, there is no likelihood of the land being sterilised.
---	--

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term

0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	None required.	
2	To ensure ready access to essential services and facilities for all residents	No obvious effects.	0	0	0	None required.	
3	To meet identified housing needs and improve the quality and affordability of housing	This policy provides strict control of the protection of Green Belt and Urban Open Land Areas. This may compromise the ability for Hertsmere to meet identified regional housing targets (5,000). However, this policy does allow certain exceptions to the development of these areas provided that adequate mitigation and/or compensatory measures are provided. Therefore this policy could allow the release of these areas to meet identified housing subject to strict criterion and as such, could have positive effects in the medium and longer term depending on the findings of the urban capacity study.	-	+/-	+/-		<p>The extent of the positive and negative effects will depend on the findings of the urban capacity study and the extent to which greenbelt release is required in the medium and longer term to meet housing targets.</p> <p>The scale and significance of effects should be confirmed through the Site Allocations DPD and when the housing figures in the RSS are finalised.</p>
4	To reduce poverty and social	No obvious effects.	0	0	0	None required.	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	exclusion and promote equality of opportunities						
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	None required.	
6	To improve population's health and reduce inequalities both geographically and demographically	Protecting greenbelt and urban open land from development where possible, offers the opportunity to safeguard their recreational and connectivity function, which is likely to result in positive effects in the short term. However, if greenbelt and urban open land release is require to meet housing targets, the loss of sites may result in indirect adverse effects as there will be less opportunities for recreational activity. In the short and medium term positive effects are likely to occur however, there may be negative effects in the longer term.	+	+	-	Any areas of urban open land lost in the future to meet the housing targets should be compensated through replacement open land.	The scale and significance of the negative effects will depend on the findings of the urban capacity study and the extent to which greenbelt release is required in the medium and longer term to meet housing targets. This should be confirmed through the Site Allocations DPD and when the housing figures in the RSS are finalised
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The continued protection of green belt and area of urban open land will have a significant positive effect by constraining development to previously developed land. The positive effect is likely to be long term and in the short and medium terms. Any potential loss in the longer term to meet identified housing targets should be mitigated to a certain extent with this policy.	++	++	+/-	Not required as effect positive.	This policy could be strengthened through cross referencing to CS1 where the focus for new development is within existing urban areas.
8	To reduce contamination and safeguard soil quality and quantity	Emphasis for developments to conserve and enhance the natural environment and biodiversity should be complementary to reducing contamination and safeguarding soil. The positive effect is likely to be achieved in the short and medium terms. Any potential loss in the longer term to meet identified housing targets should be mitigated to a certain extent with this policy.	+	+	+/-	Not required as effect positive.	This policy could be strengthened by cross referencing to Policy CS14. <i>'in addition to the objectives of Policy CS14, all development.....'</i>
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The protection of green belt and urban open land, alongside protected sites of historic or archaeological value will have a direct significant positive effect. The effect is likely to be long term and permanent.	++	++	++	Not required as effect positive.	This policy could be strengthened by separating the built and natural environment into two policies to provide greater emphasis i) protection and enhancement of biodiversity, open space and landscape and ii) protection and enhancement of historic assets (this was suggested at the options appraisal stage).
10	To maintain and enhance the quality of countryside and landscape	The quality of the countryside and landscape character will be maintained by the policy protecting green belt and areas of urban open land. The effect is likely to be significantly positive, in the short and medium terms. However, the extent to which countryside and open space land may be lost to meet housing targets, there are likely to be negative effects to a certain degree. The policy does outline the need for adequate mitigation measures therefore negative effects should be minor.	++	++	+/-	Not required as effect positive.	As above.
11	To reduce dependence on private car and achieve modal	No obvious effects.	0	0	0	n/a	A need to provide details on how the policy can relate specifically to the objective if appropriate.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	shift to more sustainable transport modes						
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	The protection of biodiversity, in addition to the protection of green belt and areas of urban open land will have a significant positive effect on protecting habitats of national and local importance. The effect is likely to be significantly positive, long term and permanent.	++	++	++	Not required as effect positive.	<p>Nature conservation designated sites should be protected for longer term release of greenbelt and open space land as a result of the sequential approach in CS policies 1 and 2 and the successful implementation of this policy.</p> <p>This policy could be strengthened by being more pro-active rather than reactive in approach i.e. by not referring specifically to the exceptions to this policy but to the protection and enhancement of the natural and built environment.</p> <p>This policy could be strengthened by referring specifically to the environmental assets in Hertsmere i.e. nature conservation designated sites, conservation areas etc...</p> <p>This policy could be strengthened by separating the built and natural environment into two policies to provide greater emphasis i) protection and enhancement of biodiversity, open space and landscape and ii) protection and enhancement of historic assets (this was suggested at the options appraisal stage).</p>
13	To improve the quality of surface and ground waters	No obvious effects.	0	0	0	n/a	See assessment of Core Policy 13 and 14.
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	As above.
15	To minimise the risk of flooding taking account of climate change	No obvious effects.	0	0	0	n/a	As above.
16	To improve local air quality	No obvious effects.	0	0	0	n/a	As above.
17	To reduce greenhouse gas emissions	No obvious effects.	0	0	0	n/a	As above.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	As above.
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	As above.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Protection of the historic and natural environment and landscape character is likely to have a slight positive effect by attracting tourism and recreation uses of areas of green belt and historic attractions. The effect is likely to be slightly positive, long term and permanent.	+	+	+	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	Protection of the green belt and urban open land is likely to result in greater concentration of development within existing settlements, which should help to improve their viability through increased demand for services and facilities. The effect is likely to be slightly positive, long term and permanent.	+	+	+	Not required as effect positive.	

Policy CS12 - Promoting recreational access to the countryside	<p>The Council will work with its partners and relevant agencies to safeguard, enhance and facilitate access to the local countryside. Measures which secure the provision of safer and more secure car-free access to Watling Chase Community Forest Gateway Sites, Historic Parks and Gardens and countryside attractions will be actively sought. The provision of or enhancement of visitor facilities in the countryside will be encouraged where this:</p> <p>(i) specifically enhances access for the local population (ii) does not harm the character, appearance and openness of the Green Belt; and (iii) does not cause or add significantly to local road congestion.</p>
---	---

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term

			ST	MT	LT		
	of opportunities						
5	To reduce and prevent crime, fear of crime and anti social behaviour	Increased accessibility into and through areas of countryside and providing safe access for pedestrians' etc, may contribute to reducing fear of crime through enhanced provision and increase in natural surveillance. Positive effects would be greater if designing out crime measures are incorporated such as enhanced lighting at main areas. Effects however are uncertain and will depend on nature of implementation. Effects are not likely to be significant.	+	+	+	None identified.	Designing out crime prevention measures to be referred to in enhanced access to recreational and countryside areas providing safer places to enjoy. Any measures to provide a safer environment would need to be in accordance with CS Policy 11.
6	To improve population's health and reduce inequalities both geographically and demographically	Increased access and car-free access to the countryside and linkages to urban areas for pedestrian, cyclists and equestrians is likely to have significant secondary positive effects in providing greater opportunities for recreational activity.	++	++	++	None identified.	To monitor visitor number to these areas if possible to ascertain the increase in usage. Monitoring may be possible at Watling Chase Community Forest Gateway if access is controlled.
ENVIRONMENTAL							
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	No obvious effects.	0	0	0	n/a	
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The promotion of recreational access to the countryside, whilst ensuring that the enhancement of visitor facilities does not harm the character, appearance or openness of the green belt is likely to have an indirect positive effect on protecting and enhancing landscape character, historic buildings, archaeological sites and cultural facilities of importance to the community. The effect is likely to be slightly positive, long term and permanent.	+	+	+	Not required as effect positive.	To ensure that positive effects are maximised, this policy should be strengthened by referring to CS Policy 11: Protection and enhancement of the environment. Criterion (ii) should be extended to include ' <i>does not harm the character, appearance and openness of the greenbelt and landscape, and wider countryside</i> '. This recommendation would achieve greater positive effects.
10	To maintain and enhance the quality of countryside and landscape	This policy aims to ensure that the enhancement of visitor facilities does not harm the character, appearance or openness of the green belt and as such, should have positive effect on maintaining the quality of the countryside and landscape. The effect is likely to be long term and permanent.	+	+	+	Not required as effect positive.	Criterion (ii) should be extended to include ' <i>does not harm the character, appearance and openness of the greenbelt, landscape and wider countryside</i> '. This recommendation would achieve greater positive effects.
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Promotion of safe and secure car free access to sites will have a positive effect on reducing dependence on private car use for recreational activities. Positive effects are likely to be permanent but not unlikely to be significant.	+	+	+	Not required as effect positive.	Successful implementation of CS22 in promoting alternatives to the car should help to achieve the positive effects identified.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	This policy the promotion of recreational access to the countryside, whilst ensuring that the enhancement of visitor facilities does not harm the character, appearance or openness of the green belt has the potential for a slight positive indirect effect on protecting local	+	+	+	Not required as effect positive.	Another criterion should be added to this policy to ensure that biodiversity is protected and enhanced through the provision and enhancement of visitor facilities. Alternatively this policy should cross

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		biodiversity through ensuring facilities do not ham the openness of the green belt. The effect is likely to be long term and permanent.					reference to CS Policies 11 and 13. These recommendations would achieve greater positive effects.
13	To improve the quality of surface and ground waters	No obvious effects.	0	0	0	n/a	
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	
15	To minimise the risk of flooding taking account of climate change	No obvious effects.	0	0	0	n/a	
16	To improve local air quality	Promotion of safe and secure car free access to sites will have a positive effect on improving air quality. In addition, improvements to visitors facilities will not be permitted if it would contribute to increasing local congestion. Positive effects are likely to be permanent but unlikely to be significant.	+	+	+	Not required as effect positive.	
17	To reduce greenhouse gas emissions	As above.	+	+	+	Not required as effect positive.	
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The promotion of recreational access to the countryside is likely to have a slight positive effect by attracting tourism and recreation uses of areas of green belt and historic attractions. The effect is likely to be slightly positive, long term and permanent.	+	+	+	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	No obvious effects.	0	0	0	n/a	

Policy CS13 - Environmental Impact of Development	<p>The Council will work with key partners, including the Environment Agency and Natural England, to ensure that development proposals do not create an unacceptable level of risk from the impact of natural forces or human activity on occupiers of a site, the local community and the wider environment. Proposals must take particular account of the need to:</p> <ul style="list-style-type: none"> iv) mitigate the potential adverse effects of climate change; ii) ensure adequate protection from the risk of on and off-site flooding, including where this is required by the Environment Agency; iv) avoid or mitigate the effects of pollution from noise, lighting, odours and other emissions iv) ensure that land and buildings are free from contamination which might adversely affect human health or the environment;
--	--

	Development proposals must demonstrate that any adverse effects can be overcome by appropriate alleviation and mitigation, which are capable of being secured through planning condition or obligation.
--	---

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative
--

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	None identified.	
2	To ensure ready access to essential services and facilities for all residents	No obvious effects.	0	0	0	None identified.	
3	To meet identified housing needs and improve the quality and affordability of housing	No obvious effects.	0	0	0	None identified.	
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0	None identified.	
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	None identified.	
6	To improve population's health and reduce inequalities both geographically and demographically	The extent to which this policy seeks to protect and enhance the natural environment including adapting to climate change and mitigating the effects of pollution from emissions, this may have indirect positive effects on health, particular in terms of respiratory disorders. The scale and magnitude of these positive effects are uncertain and are likely to be felt in the longer term.	0	0	+	Difficult to monitor the effects of this policy on improvements in health.	Potentially amend policy wording to refer to the indirect benefits of this policy for human health.
ENVIRONMENTAL							
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	No obvious effects.	0	0	0	n/a	
8	To reduce contamination and safeguard soil quality and quantity	Direct reference to ensuring land and buildings are free from contamination should have a positive effect on reducing contamination. Effects are likely to be permanent but not significant.	+	+	+	Not required as effect positive.	
9	To protect and enhance landscape character. historic	No obvious effects.	0	0	0	n/a	There should be a reference in this policy to CS Policy 11: Protection and enhancement of the

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	buildings, archaeological sites and cultural features of importance to the community						built and natural environment.
10	To maintain and enhance the quality of countryside and landscape	No obvious effects.	0	0	0	n/a	As above.
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	No obvious effects	+	+	+	Not required as effect positive.	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	There is potential for slight positive effects on enhancing local biodiversity through the encouragement of SUDS, although this is dependent on the implementation of the Building Futures Guide as SPD. The likelihood of positive effects is therefore not certain.	+	+	+	Not required as effect positive.	Dependent upon implementation of guidance contained within the Building Futures Guide which is intended to be adopted as SPD. SUDS should be specifically referred to in policy wording itself to strengthen its performance.
13	To improve the quality of surface and ground waters	Minimising risk to the water environment should have a positive effect on improving water quality. Positive effects are likely to be minor, permanent but not significant.	+	+	+	Not required as effect positive.	Emphasis in the policy wording to sustainable management of natural resources – suggest rewording.
14	To minimise water consumption	Development will increase water consumption.	-	-	-	Reference to BREEAM/ Ecohome standards will have a positive effect through encouraging reduced water consumption	This policy should be reworded to refer to minimising water consumption in new development – through the encouragement of mitigation measures such as water saving devices or grey water systems.
15	To minimise the risk of flooding taking account of climate change	Direct reference to adequate protection from flooding should have a positive effect on raising the issue of and helping to reduce flood risk. Flood prevention measures and avoiding areas liable to flood, as recommended by the EA, will ensure that development does not impede the flow of water or increase the risk of flooding. In addition, requiring developers to make provisions for mitigation measures, the policy should have permanent, positive effects in the short, medium and long term.	+	+	+	Development decisions must be guided by the principles of PPS25. Developments should also be designed to be capable of withstanding flood events i.e. by identifying appropriate ground and basement floor uses. Flood risk assessments will be required for the development of sites that lie within flood zones 2 and 3 as defined by the Environment Agency.	This policy should be strengthened to be more proactive rather than reactive and should include a criterion: <i>'no development in the floodplain unless flood prevention/mitigation measures are in place as required by the Environment Agency'</i> . (this was the preferred policy option during the SA options appraisal). An increase in flooding is an adverse effect of climate change. Suggest deleting criterion (i). SUDS should be specifically referred to in policy wording itself to strengthen its performance.
16	To improve local air quality	No specific reference to air quality improvements in existing policy wording.	?	?	?		Refer to improving air quality through new development in this policy. Suggest combining CS13 and CS14 to strengthen the aims of both objectives.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
17	To reduce greenhouse gas emissions	No specific reference to reducing greenhouse gases in existing policy wording.	?	?	?		Refer to reducing greenhouse gas emissions through new development in this policy, linked with the location of new development. Suggest combining CS13 and CS14 to strengthen the aims of both objectives.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	Suggest combining CS13 and CS14 to strengthen the aims of both objectives.
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	Suggest combining CS13 and CS14 to strengthen the aims of both objectives.
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Flooding can have significant adverse effects for local economies. Ensuring that adequate protection from the risk of on and off-site flooding will indirectly have a positive effect on providing a balanced and stable economy. The effect is likely to be long term and permanent, although dependent upon the detailed implementation of the policy and the efficiency of mitigation measures in reducing flood risk.	+	+	+	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	No obvious effects.	0	0	0	n/a	

Policy CS14 - Efficient Use of Natural Resources	<p>Development proposals should ensure that efficient use is made of natural resources through their layout, design, construction and measures for waste disposal, by incorporating conservation measures and by making the best use of renewable resources. Developments larger than 1,000 sq m or 10 new homes will be required to include measures to off-set 10% of total predicted carbon emissions through a combination of sustainable design and construction and on-site renewable energy generation.</p> <p>To facilitate these requirements, the Council will support the development of on-site recycling facilities and new sources of renewable energy generation where there is no adverse environmental impact on nearby communities.</p>

	opportunities for lifelong learning and employability						
2	To ensure ready access to essential services and facilities for all residents	No obvious effects.	0	0	0	n/a	
3	To meet identified housing needs and improve the quality and affordability of housing	No reference to high quality design, unlikely to be any effects.	0	0	0	n/a	Refer to comments on the assessment of environmental objectives and suggested rewording.
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0	n/a	
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	n/a	
6	To improve population's health and reduce inequalities both geographically and demographically	This policy offers the opportunity to realise health benefits through making efficient use of natural resources in the design of buildings creating 'healthier buildings' which may have indirect positive effects in improving health in particular in terms of respiratory disorders. The scale and magnitude of these positive effects are uncertain and are likely to be felt in the longer terms.	0	0	+	Difficult to monitor the effects of this policy on improvements in health.	
ENVIRONMENTAL							
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	No obvious effect.	0	0	0	Not required as effect positive.	Policy requires re-writing to correctly refer to BREEAM standards. BREEAM is a certification systems that needs to relate to one of the specific categories e.g. 'very good' or 'excellent'. Recommendation: Policy is redrafted to refer to the requirement for new dwellings to achieve BREEAM/ Ecohome 'very good' or 'excellent' category.
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	Neither Building Futures or BREEAM make reference to contamination and/or soil quality, this is dealt with instead by PPS 23 Suggest combining CS13 and CS14 to strengthen the aims of both objectives.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effects.	0	0	0	n/a	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
10	To maintain and enhance the quality of countryside and landscape	No obvious effects.	0	0	0	n/a	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	No obvious effects.	+	+	+	Not required as effect positive.	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	No obvious effects.	0	0	0	n/a	Policy requires re-writing to correctly refer to BREEAM standards. BREEAM is a certification systems that needs to relate to one of the specific categories e.g. 'very good' or 'excellent'. Suggest combining CS13 and CS14 to strengthen the aims of both objectives and maximise positive effects.
13	To improve the quality of surface and ground waters	Policy refers to ensuring the efficient use of natural resources through layout, design, construction etc but does not refer to how they aim to achieve this. Although the policy will generally achieve positive effects, the policy wording as it currently stands is vague and therefore weak and underachieves.	+	+	+	Not required as effect positive.	As above.
14	To minimise water consumption	As above.	+	+	+	Not required as effect positive.	As above.
15	To minimise the risk of flooding taking account of climate change	As above.	+	+	+	Not required as effect positive.	As above.
16	To improve local air quality	As above.	+	+	+	Not required as effect positive.	As above.
17	To reduce greenhouse gas emissions	As above.	+	+	+	Not required as effect positive.	As above.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	By requiring large developments to include measures to off-set 10% of total predicted carbon emissions through a combination of sustainable design and on-site renewable energy generation there is potential for a positive effect. However, the policy does not stipulate how the 10% is to be calculated and therefore provides a low certainty in achieving this. The effect has the potential to be positive, although dependent upon implementation.	+	+	+	Not required as effect positive.	Policy does not stipulate how the 10% carbon emissions will be calculated and is inconsistent with the East of England Plan. Recommendation: Policy is redrafted to require the submission of an energy consumption statement in line with East of England Plan requirements. Policy could be strengthened by requiring developments to incorporate equipment for renewable power generation so as to provide at least 10% of their predicted energy requirements. Requirement for an energy assessment (how will they know what 10% of a

Table E.8 - Building Sustainable Communities Policies

Policy CS15- Access to Services	The Council will work with local service providers to facilitate their stated land use and buildings requirements through the identification of mixed-use development opportunities in the Site Allocations DPD. The Council will also require new development to contribute to the Community Strategy aim of ensuring fair access to services and the wider goal of creating a safer and more sustainable environment. New proposals will be assessed against their impact on existing local infrastructure, services and resources, and where necessary, new provision should be made as part of the development in order to meet or fund any shortfall.

			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	The extent to which new provision in development required by this policy comprises educational facilities, this policy is likely to have permanent positive effects, although the likelihood of these effects occurring are not certain and depends on implementation and nature of development coming forward.	+	+	+	None required as positive.	The scale and magnitude of the effects will depend on the successful implementation of this policy and confirmed through the appraisal of the Site Allocations DPD. This policy does not stipulate the type of community facilities in the policy wording.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
2	To ensure ready access to essential services and facilities for all residents	This aim of this policy is to ensure fair access to services to contribute to the Community Strategy and create sustainable communities and therefore fully supports this objective. This policy will have permanent positive and significant effects given the flexibility in its wording and the overall aim of improving access to services.	++	++	++	None required as positive.	This policy is highly complementary with the SA objective. The scale and magnitude of the effects will depend on the successful implementation of this policy and confirmed through the appraisal of the Site Allocations DPD.
3	To meet identified housing needs and improve the quality and affordability of housing	This policy assesses new residential proposals against their impact on existing local infrastructure, services and resources. Where there is a shortfall in community facility provision, the Council through this policy will request new provision and as such, may restrict development or restrict affordable housing provision as developers seek to minimise loss of profit. The likelihood of negative effects is uncertain and will depend on location and nature of developments.	-	-	-	Mitigate where possible through S106/tariffs planning obligations (through successful implementation of CS18).	The scale and magnitude of the effects will depend on the successful implementation of this policy and confirmed through the appraisal of the Site Allocations DPD. Recommend cross referencing to CS18: Planning tariffs and obligations.
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0	n/a	
5	To reduce and prevent crime, fear of crime and anti social behaviour	This policy in supporting the provision of new community facilities can play a crucial role in combating crime as 'boredom' and 'lack of things to do' are often cited as causes for certain criminal activities. The likelihood of these positive effects occurring is uncertain, as this policy cannot change social behaviour.	+	+	+	Designing out crime in new development should be referred to in order to maximise the positive effects.	Policy should be clearly linked with Hertsmere Crime, Disorder and Drugs Strategy.
6	To improve population's health and reduce inequalities both geographically and demographically	This policy in supporting the provision of community facilities that which may include health care, sporting and leisure opportunities in Hertsmere, is likely to have indirect positive effects on improving health in Hertsmere however, the positive effects are uncertain and secondary on nature.	+	+	+	To monitor the number, type and location of proposals coming forward through the development control process.	Policy should be clearly linked with Hertsmere Crime, Disorder and Drugs Strategy.

--

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	This policy lends strong support to the provision or dual use of key community facilities, which offers the potential to contribute to providing additional venues for education and training. As such, there are likely to be significant permanent positive effects depending on the successful implementation of this policy.	++	++	++	To monitor the number of proposals coming forward as venues for education, training, particularly for adults through the development control process.	Depends on the successful implementation of this policy. This policy does not stipulate the type of community facilities in the policy wording (only supporting text). The positive effects may be greater if the specific community facilities are referred to in the policy wording.
2	To ensure ready access to essential services and facilities for all residents	This policy presents a pro-active support for new uses, protection of existing uses where there is no demonstrated surplus, and the conversion, where appropriate, of residential buildings to provide local community facilities. As such, it presents a flexible approach, which should help to secure better availability and accessibility of services to a wider section of the population in Hertsmere. This policy will have permanent positive and significant effects given the flexibility in its wording.	++	++	++	To monitor the number, type and location of proposals coming forward through the development control process.	
3	To meet identified housing needs and improve the quality and affordability of housing	The conversion or redevelopment of residential dwellings to provide local community facilities may have negative effects through taking away housing stock. Conversely, the release of surplus and unused sites for potentially housing use, is likely to contribute to meeting identified housing need. The likelihood of positive or	+/-	+/-	+/-		

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		negative effects will depend on individual cases, location and appropriate mitigation for the loss of housing is provided.					
4	To reduce poverty and social exclusion and promote equality of opportunities	A pro-active and flexible approach to community facilities provision may have positive effects on this objective as community and leisure facilities can be important social hubs. The likelihood, scale and magnitude of these positive effects will depend on the location of facilities within identified deprived areas. Overall, effects should be positive in the medium and long term.	0	+	+	To monitor the location of proposals coming forward in identified deprived areas through the development control process.	The supporting text should refer to the identified areas of social deprivation in Hertsmere to qualify these positive effects.
5	To reduce and prevent crime, fear of crime and anti social behaviour	This policy in protecting existing and providing new community facilities can play a crucial role in combating crime as 'boredom' and 'lack of things to do' are often cited as causes for certain criminal activities. The likelihood of these positive effects occurring is uncertain, as this policy cannot change social behaviour.	+	+	+	Designing out crime in new development should be referred to in order to maximise the positive effects.	Policy should be clearly linked with Hertsmere Crime, Disorder and Drugs Strategy.
6	To improve population's health and reduce inequalities both geographically and demographically	This policy provides a mechanism for the pro-active provision of additional facilities that may include health care, sporting and leisure opportunities in Hertsmere, which may have indirect positive effects on improving health in Hertsmere however, the positive effects are uncertain and secondary on nature.	+	+	+	To monitor the number, type and location of proposals coming forward through the development control process.	
ENVIRONMENTAL							
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	The conversion of existing buildings and in exceptional circumstances, the adaptation or redevelopment of buildings, will have a positive effect on making the most efficient use of previously developed land and existing buildings. The effect is likely to be non-significant, although long term and permanent.	+	+	+	Not required as effect positive.	
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of	No obvious effects.	0	0	0	n/a

0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	n/a	
2	To ensure ready access to essential services and facilities for all residents	Mixed-use development is likely to be accommodated in areas of good public accessibility and road capacity, which may result in supporting access to services and facilities depending on the nature of the mixed-use development. Residential use however will be provided in accessibility areas. This policy will result in permanent positive effects linking new development to accessible areas but effects are not significant.	+	+	+	None required as positive.	
3	To meet identified housing needs and improve the quality and affordability of housing	Mixed use development will contribute to meeting housing targets however; mixed use development may compromise maximising housing units in new development which may have medium and longer term negative effects on meeting identified housing need.	+	+/-	+/-	Cross reference to CS Policy 1 – location and scale of development.	
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0	n/a	
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	n/a	Designing out crime prevention measures should be incorporated into any new development to reduce crime and fear of crime.
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0		
ENVIRONMENTAL							
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	The seeking of mixed use development on major development sites in Borehamwood and Potters Bar is likely to have a positive effect as these development sites are likely to be on previously developed land, although there is no guarantee for this. There is also the potential for negative effects, as it is possible the policy may allow mixed use development on Greenfield sites. The effect is therefore dependent on the implementation of the policy.	+/-	+/-	+/-	Additional criteria referring to making the most efficient use of previously developed land before Greenfield sites may strengthen the policy.	Recommendation: Strengthen criteria as part of policy to include 'the need to make the most efficient use of previously developed land before Greenfield sites'.
8	To reduce contamination and safeguard soil quality	Development of land should reduce contamination through the requirement for remediation (in conjunction with	+/-	+/-	+/-	Measures to prevent contamination from new land uses. Implementation of a CEMP	Reference to assessment proposals on the impact on the environment is

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	and quantity	Environmental Policy CS13). However there is potential for contamination from the new land use dependent on its nature. It is likely that positive effects will prevail particularly with mitigation measures in place. Overall, the effect is dependant on the implementation of the policy.				to reduce the risk of pollution, reference to PPS23 in supporting text.	not clear. Strengthen criteria or recommend cross referencing with environmental protection policy CS13.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	Scale of effect is dependent upon the implementation of the policy. There is potential for negative effects if mixed-use development is located in areas of sensitive landscape character. Although the policy refers to the 'impact on the environment within and around the development site', the policy is not clear as to what is meant by environment. The effect is therefore dependent on the implementation of the policy.	-	-	-	Additional criteria could be added to strengthen the definition of environment by the policy to refer to protecting landscape character, historic buildings, archaeological sites and cultural features of importance to the community.	Recommendation: Strengthen definition of 'environment' in the policy wording by referring to protecting landscape character, historic buildings, archaeological sites and cultural features of importance to the community.
10	To maintain and enhance the quality of countryside and landscape	Scale of effect is dependent upon the implementation of the policy. There is potential for negative effects if mixed-use development is located in areas of or adjacent to areas of countryside. Although the policy refers to the 'impact on the environment within and around the development site', the policy is not clear as to what is meant by environment. The effect is therefore dependent on the implementation of the policy.	-	-	-	Additional criteria could be added to strengthen the definition of environment by the policy to refer to maintaining the quality of the countryside and landscape.	Recommendation: Strengthen definition of 'environment' in the policy wording by referring to maintaining the quality of the countryside and landscape.
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Mixed use development should reduce the need for any travel by providing housing and services on one site or close by. Any need to travel could then be able to be met by sustainable transport modes. The positive effects are likely to be permanent but not significant.	+	+	+	Not required as effect positive.	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	Scale of effect is dependent upon the implementation of the policy. There is potential for negative effects if mixed-use development has negative effects on local and non-designated habitats and species. Although the policy refers to the 'impact on the environment within and around the development site', the policy is not clear as to what is meant by environment. The effect is therefore dependent on the implementation of the policy.	-	-	-	Additional criteria could be added to strengthen the definition of environment by the policy to refer to protecting and enhancing wildlife and habitats which are important on an international, national and local scale.	Recommendation: Strengthen definition of 'environment' in the policy wording by referring to maintaining the quality of the countryside and landscape.
13	To improve the quality of surface and ground waters	Mixed use development reducing the need to travel should have positive effects on improving surface run off. However during construction of the site there will be potential for water pollution. The negative effects are likely to be temporary. Positive effects are likely to be minor and not significant.	-	+/-	+/-	Measures during construction and operation to reduce any potential for water contamination. Implementation of a CEMP to reduce the risk of pollution.	
14	To minimise water consumption	Development of any kind will increase water consumption resulting in potential negative effects as policy wording currently stands. The negative effects are likely to be permanent but not significant based on current policy	-	-	-	Reference to BREEAM/ Ecohome standards will have a positive effect through encouraging reduced water consumption. Cross reference with environmental policy	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		wording.				CS14.	
15	To minimise the risk of flooding taking account of climate change	Development of any kind will increase flood risk, to a greater extent if the mixed use is located with the floodplain. New development will require mitigation sought through the application of CS Policy CPOL3 and PPS25. The likelihood of effects occurring is uncertain at this stage.	?	?	?	Development decisions must be guided by the principles of PPS25. Developments should also be designed to be capable of withstanding flood events i.e. by identifying appropriate ground and basement floor uses. Flood risk assessments will be required for the development of sites that lie within flood zones 2 and 3 as defined by the Environment Agency.	Recommendation: Strengthen definition of 'environment' in the policy wording by referring to minimising the risk of flooding or cross reference to relevant CS policy CS13.
16	To improve local air quality	Mixed use development should reduce the need for any travel by providing housing and services on one site or close by. Any need to travel could be met by sustainable transport modes. The positive effects are permanent but not significant.	+	+	+	Not required as effect positive.	
17	To reduce greenhouse gas emissions	Mixed use development should reduce the need for any travel by providing housing and services on one site or close by. Any need to travel could be met by sustainable transport modes. The positive effects are permanent but not significant.	+	+	+	Not required as effect positive.	
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Mixed-use developments have the potential for a positive effect on contributing towards a prosperous and stable economy by incorporating employment, community and residential uses close together and contributing towards a stable economy.	+	+	+	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	Town Centres in Borehamwood and Potters Bar are likely to gain increased population and additional services which should help to improve their viability through increased demand for services and facilities. The effect is likely to be slightly positive, long term and permanent.	+	+	+	Not required as effect positive.	
Policy CS18 - Planning Tariff and Obligations		Provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, will be secured through a fixed tariff on the approval of each new home. The tariff will be set at a suitable level to ensure that the development of new housing does not adversely affect existing facilities and services, having regard to the viability of developing land in the Borough.					

	<p>The provision of affordable housing together with on and off-site facilities, training, services and improvements necessitated by new commercial development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>Specific details on arrangements for securing a planning tariff and planning obligation will be set out in the Planning Tariffs and Obligations Supplementary Planning Document.</p>

7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	No obvious effects.	0	0	0	n/a	
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effects.	0	0	0	n/a	
10	To maintain and enhance the quality of countryside and landscape	No obvious effects.	0	0	0	n/a	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Provision of facilities and services through tariffs and obligations may generate sufficient funding to enhance sustainable transport options however, this will depend on the nature of obligations sought/provided and as such, the positive effects are uncertain.	+	+	+	Not required as effect positive.	The scale and significance of effects and the confirmation of such effects will be confirmed through Planning Tariffs and Obligations SPD.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	Improvements to the Watling Chase Community Forest specified under the supporting text to the policy through planning obligations are likely to have a slight positive effect on enhancing biodiversity. The effect is likely to be long term and permanent.	+	+	+	Not required as effect positive.	As above.
13	To improve the quality of surface and ground waters	Provision of facilities and services through tariffs and obligations maybe include waste water infrastructure improvements. However construction and operation of any development site may cause pollution	+/-	+/-	+/-	Ensure measures are used during construction and operation of sites to reduce pollution potential.	Cross reference to CS Policies 13 and 14. Successful implementation of these policies should ensure that negative effects are minimised.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		water pollution. The extent of the positive and negative effects depends on implementation.					
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	
15	To minimise the risk of flooding taking account of climate change	Development of any kind will increase flood risk resulting in negative effects. Planning obligations could include the provision of SUDS and flood alleviation measures to reduce the risk of flooding. Policy CS13 'Environmental Impact of Development' may reduce this risk, although the degree to which this occurs will be dependent upon the implementation of this policy. However, a negative residual effect is likely.	-	-	-	Development decisions must be guided by the principles of PPS25. Developments should also be designed to be capable of withstanding flood events i.e. by identifying appropriate ground and basement floor uses. Flood risk assessments will be required for the development of sites that lie within flood zones 2 and 3 as defined by the Environment Agency.	Cross reference to CS Policies 13 and 14. Successful implementation of these policies should ensure that negative effects are minimised. The scale and significance of effects and the confirmation of such effects will be confirmed through Planning Tariffs and Obligations SPD.
16	To improve local air quality	Provision of facilities and services at appropriate locations should reduce the need for travel. Remaining need to travel should then be met by sustainable transport modes	+	+	+	Not required as effect positive.	The scale and significance of effects and the confirmation of such effects will be confirmed through Planning Tariffs and Obligations SPD. As above. Cross reference to transport policies
17	To reduce greenhouse gas emissions	Provision of facilities and services at appropriate locations should reduce the need for travel. Remaining need to travel should then be able to be met by sustainable transport modes	+	+	+	Not required as effect positive.	As above.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	Improvements to recycling facilities specified under the policy are likely to have a slight positive effect on encouraging the recycling of waste. The effect is likely to be long term and permanent.	+	+	+	Not required as effect positive.	The scale and significance of effects and the confirmation of such effects will be confirmed through Planning Tariffs and Obligations SPD.
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Tariffs and S.106 agreements have the potential for a significant positive effect through the provision of a range of community facilities and infrastructure improvements to support a balanced and stable economy. The effect is likely to be long term and permanent.	++	++	++	Not required as effect positive.	The scale and significance of effects and the confirmation of such effects will be confirmed through Planning Tariffs and Obligations SPD.

1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	None required.	
2	To ensure ready access to essential services and facilities for all residents	The town centre policies in the draft CS provide a balanced town centre strategy allowing appropriate size and scale retail and commercial units in the main towns, districts and neighbourhood centres of Borehamwood, Potters Bar, Bushey and Radlett. As such, a balanced town centre strategy will ensure ready access to facilities and services is provided. The focus for larger scale development and night time economy in the main centres of Borehamwood and Potter Bar and allowing development in Shenley Retail Park should help to concentrate facilities and services in the most accessible locations. However, there the health check study undertaken shows that there is unlikely to be a need for significant new retail space, the scale of positive effects are unlikely to be significant.	+	+	+	None required.	The town centre policies should be amended to ensure that new development permitted is supported by sustainable transport infrastructure or cross refer to Core Strategy Policies 20 and 21.
3	To meet identified housing needs and improve the quality and affordability of housing	No obvious effect.	0	0	0	None required.	
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effect.	0	0	0	None required.	
5	To reduce and prevent crime, fear	The town centre policy in providing a safe	+	+	+	None required.

	of crime and anti social behaviour	and attractive environment and in not permitting further consents in areas where concentrations of drinking establishments and night-clubs cause existing problems should contribute to reducing crime and fear of crime. The likelihood of these positive effects is uncertain as policy will not change social behaviour and the duration of the positive effects is unknown.					
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effect.	0	0	0	None required.	
ENVIRONMENTAL							
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	By focussing retail development within the designated town, district or neighbourhood centres retail development will be directed away from Greenfield sites and is likely to have a significant positive effect on this objective. The effect is likely to be long term and permanent.	++	++	++	Not required as effect positive.	
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effects.	0	0	0	n/a	
10	To maintain and enhance the quality of countryside and landscape	No obvious effects.	0	0	0	n/a	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Maintaining the strength and vitality of the town centres as well as encouraging an evening economy should ensure that people do not have to travel far for retail and leisure. There is potential for this to reduce the dependence on private car use and as such, is likely to have permanent positive but not significant effect.	+	+	+	Not required as effect positive	Providing an attractive town centre which can be used in the day and evening will reduce the need for people to travel elsewhere for retail and leisure needs. This can be enhanced by providing good night bus services to deter reliance on cars in the evening.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	No obvious effects.	0	0	0	n/a	
13	To improve the quality of surface	No obvious effects.	0	0	0	n/a	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	and ground waters						
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	
15	To minimise the risk of flooding taking account of climate change	No obvious effects.	0	0	0	n/a	
16	To improve local air quality	Provision of good retail and leisure facilities should reduce the need to travel to other settlements for these services which should have a permanent positive effect on improving air quality.	+	+	+	None required.	
17	To reduce greenhouse gas emissions	Provision of good retail and leisure facilities should reduce the need to travel to other settlements for these services which should have permanent positive effect on reducing greenhouse gas emissions from transport.	+	+	+	None required.	
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The identification of primary and secondary shopping frontages will have a significant positive effect on supporting the wider role of town centres and contributing towards a balanced and stable economy. The effect is likely to be long term and significant.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	The policy seeks to strongly support the development of diverse town centres with strong retail cores enveloped in a broader range of uses in secondary frontages. This is the model recognised as delivering vital and viable town centres in the most effective manner. The ability to control the location of (A4) pubs and bars and (A5) take away uses will enable better control of the night time economy, with a secondary effect on enhancing the viability and vitality of town centres. The effect is likely to be long term and significant.	++	++	++	Not required as effect positive.	

Appendix F - Assessment of Preferred Policies (2007 and 2008)

F.1 Core Strategy Policies April 2007

- F.1.1 Following discussions with HBC prior to the submission of the Core Strategy and SAR to Regulation 26 consultation, Council Officers revised the wording of the Core Policies in April 2007 to take into account where possible, the recommendations outlined in Appendix F.
- F.1.2 These recommendations were made to improve the sustainability performance of the Core Strategy (November 2006), where appropriate. In some cases, cross-referencing of policies was recommended to clarify the application of all Core Policies to specific development proposals.
- F.1.3 Where the Council introduced new policies from the November 2006 version or significantly changed the policies as a result of influence outside of the SA, these were subject to a second appraisal and the results reported here in this section.
- F.1.4 Table F.1 presents the revised set of Core Policies proposed for the Core Strategy prior to the Executive Committee in November 2006. Following the Executive, there were further changes made to the Core Strategy Policies in April 2007 (see Table F.2 -). The set of Core Policies that were subject to Regulation 26 consultation in October 2007 are outlined in Table F.2 - .
- F.1.5 Revised assessment is presented in Table F.4 to Table F.11.

Changes to Spatial Policies

- F.1.6 The SA had recommended that there should be an overarching spatial policy on sustainable development which would guide subsequent policies in the Core Strategy. Whilst it was considered that the spatial policies did consider sustainable development, they did not cover all the principles of sustainable development.
- F.1.7 As such, the Council included a new overarching spatial policy on sustainable development, in place of their previous spatial objective relating to improving and sustaining the quality of the local environment.
- F.1.8 It is considered that this policy ensured that there is a stronger emphasis on sustainable development throughout the plan than the original policy SP1.
- F.1.9 In addition, it was considered that there was a strategic policy missing in this Core Strategy relating to high quality and sustainable design. As such, Council included the new policy – SP6: Securing High Quality Design in the April 2007 version.
- F.1.10 Overall this policy was assessed as having positive effects on the social, economic and environmental SA objectives. In particular there were positive significant effects on SA09 in protecting and enhancing the landscape character and built environment and SA10 in enhancing the quality of the landscape and countryside through ensuring high quality sensitive design.

Core Strategy Policies

Housing

- F.1.11 CS Policy 1: The Location and Supply of New Homes and CS Policy 2: The Phasing of New Development were both significantly revised. This is mainly due to the fact that Hertsmere will have to make provision for 5,000 new homes (at an average annual house building rate of 250 homes) should this represent the housing requirement in the finalised East of England Plan for the period 2001 – 2021. This is looking more likely as the RSS is examined and finalised. This additional provision of 800 from the previous preferred policy had implications for policies CS1 and CS2 (now policy CS3).
- F.1.12 As such these policies were subject to a second appraisal. Detailed tables are presented in this section below.

- F.1.13 The assessment of CS1 concluded that as the policy included the SA recommendations to cross reference compliance with environmental policies CS11, CS12 and CS14, the assessment of the policy against the physical environmental objectives in the short and medium term was considered positive as the consideration of the historic environment, biodiversity, landscape and countryside were included within the site assessment criteria. However, in the longer term, the development pressure to meet the 5,000 housing target will result in further encroachment into greenbelt and greenfield sites as permitted through new CS Policy 2 and as such, negative effects on environmental objectives SA08, SA09, SA10, SA12, SA13, SA15 are predicted to occur.
- F.1.14 This policy was assessed as having significant positive effects on the social objective as it provided a commitment to meet the housing target based on the housing needs assessment for the region. To ensure that housing development included provision for affordable housing, it was recommended to cross-refer to CS4.
- F.1.15 The policy was assessed as having positive effects on the accessibility objective SA02 and in promoting sustainable modes of transport (SA11) however, the effectiveness of this policy against the objective will be dependent on some elements which are beyond the scope of planning.
- F.1.16 Hertsmere introduced a new policy into the April 2007 version of the Core Strategy which became CS Policy 2. This policy relates to housing beyond existing built up areas. This policy was appraised and performed badly against most of the environmental objectives namely SA07 (flooding), SA08 (soil quality), SA09 (landscape and historic character), SA10 (landscape), SA12 (biodiversity), SA13 (water quality), SA16 (air quality), SA17 (greenhouse gases emissions) and SA19 (waste). This is because the policy promotes changes to greenbelt boundaries to accommodate 550 new homes on particular sites. The appraisal of the particular sites will be undertaken during the SA of the Allocations DPD. However, for the Core Strategy it was recommended that the policy included a phasing clause in the policy wording to ensure that green belt sites are only released for development once all brownfield sites have been developed.
- F.1.17 This policy was assessed as having minor positive effects against social objective SA03 (housing) as the expansion of sites into the greenbelt in some locations will ensure that housing targets can be met and moreover, a density target of 40dph should help to meet the targets.
- F.1.18 The original CS Policy 3, which became CS Policy 4, on affordable housing, had also been revised following internal discussions.
- F.1.19 Policy CS4 seeks a provision of at least 25% on qualifying sites, pending the finalisation of Affordable Housing requirements in the East of England Plan, equating to an overall Affordable Housing target of 840 homes (out of an overall housing target of 5,000 homes).
- F.1.20 The provision of affordable housing has been reduced from 40% of total proposed housing being affordable seeking the provision of at least 25% on qualifying sites. This policy has been subject to a second appraisal. In the original appraisal of this policy it was considered that this policy would have significantly positive effects against SA03 and SA04 in providing affordable housing in accessible locations and providing sufficient housing that is affordable. Overall the assessment has considered that the revised wording of this policy results in significant negative effects on SA03 as this level of provision is below the level that it is advised in the Hertsmere's Housing Needs Survey. This survey identifies a shortfall of 351 affordable houses a year. During the maximum phase of house building, only 83 affordable houses may be built a year with this policy which will have a long term negative effect.
- F.1.21 Hertsmere made no changes to the original CS Policy 4: Affordable Housing in rural areas on exception sites (now CS 5).
- F.1.22 The SA recommendations made for original CS Policy 5: Gypsies and Travellers (now CS6) have been taken into consideration and the following additional criteria to this policy, as recommended in the draft SAR, have been included in the revised policy wording:
- The potential risk of flooding or the ability to mitigate this risk (SA objective 8)

- To ensure that any adverse effects on the built and natural environment are avoided, mitigated and/or compensated'.

F.1.23 This ensures that sites for additional encampments take into consideration nature conservation (SA12), landscape (SA10) and heritage assets (SA9) and that the adverse effects identified on the built and natural environment are avoided, mitigated and/or compensated.

F.1.24 Hertsmere revised their policy relating to Housing Mix (Policy CS7). The key change is the removal of reference to 100% of new homes being built to Lifetime Home standards. Reference to Lifetime homes is considered in CS Policy 20: Physically Accessible Buildings as recommended previously. It is considered that this revision did not affect the sustainability appraisal of this policy if anything, strengthened the emphasis of the policy which already achieves positive significant effects against objective SA32.

Employment

F.1.25 The original CS policies 8, 9 and 10 (9, 10 and 11 respectively) have reflected the SA recommendations and now the policies are cross referenced to relevant environmental policies to strengthen their overall environmentally sustainable performance.

F.1.26 Original CS Policy 7: scale and distribution of employment land became CS8 and this policy has been subject to a second appraisal due to the significant changes to the policy wording.

F.1.27 In summary, the release of up to 4 hectares of previously developed land within the Elstree Way Employment Area for new housing or housing-led mixed use development was assessed as having significant positive effects on SA03 however conversely; this policy amendment has a slight negative impact on economic objectives 20 and 21 due to the permitted release of land. The assessment of the policy against the environmental policies has not changed.

F.1.28 In terms of the environmental objectives a range of positive and negative but not significant effects were identified due to the potential negative effects of new development on the environment. This policy had previously been assessed as being reactive rather than proactive in its protection of the environment. It was recommended that the negative effects identified could be minimised by adding an additional criterion when assessing the release of employment sites to ensure that adverse effects on the built and natural environment are avoided and/or mitigated/compensated. This has been included in the revised policy wording.

Open Land and Environment

F.1.29 Hertsmere have fully taken into consideration the SA recommendation for Core Policy 11 (now 12). It was recommended that this policy could be strengthened to by splitting the policy into 2 separate policies i) protection and enhancement of biodiversity, open space and countryside and ii) protection and enhancement of historic assets. The recommendation has been taken on board in the revised Core Strategy.

F.1.30 It is considered that this has strengthened the performance of the plan on the physical and built environment.

F.1.31 Original Core Policy 12 (now CS14) has taken into consideration the SA recommendations.

F.1.32 The combination of the original CS policies 12 and 13 was recommended. This has happened and it is considered that the sustainability performance of the plan has improved as it has one single policy encompassing all environmental considerations for new development in the sustainable management of natural resources.

F.1.33 Original Core Strategy Policies 15, 16, and 17 (now CS16, CS17 and CS18 respectively) have not changed significantly and have taken on board the SA recommendations.

Transport

- F.1.34 The transport policies CS20, CS21 and CS22 (now CS21, CS22 and CS23), have not changed significantly. It was recommended that the transport policies could be strengthened by referring to the promotion of an overall sustainable transport strategy. This has not been taken into consideration in the final set of Core Strategy policies however; this recommendation was for clarity rather than having any implications on the sustainability appraisal.

Table F.1 - Revised Set of Core Policies for the Core Strategy (November 2006)

Policy	Description
Strategic Spatial Policies	
Policy SP1 – Improving and sustaining the quality of the local environment	The use and development of all land will be assessed against the need to protect and enhance the natural and built environment, including the diverse character and local distinctiveness of the Borough. Development should take place within the environmental capacity of its locality and in proportion to its location within the hierarchy of settlements in the Borough. Development will be required to maximise the conservation of land, energy and resources and should be designed to a high standard, taking advantage of opportunities to improve the character and quality of an area. All development proposals should be assessed for their compliance with the key environmental policies set out in the Core Strategy.
Policy SP1 - Creating Sustainable Development	<p>The Council will require all development to make a sustainable contribution to delivering the Core Strategy Spatial Vision and Strategy. Accordingly new development will be required to:</p> <ul style="list-style-type: none"> i) Make efficient use of brownfield land within hierarchy of settlements as shown on the key diagram and Site Allocations Proposals Map; ii) Ensure a healthy living environment to residents and other users of a development ; iii) Seek to minimise the environmental impact of transport by promoting alternatives to the car; iv) Be constructed and operated using a minimum minimising amount of non-renewable resources and required to minimise the use of energy; v) Avoid prejudicing, either individually or cumulatively, characteristics and features of the natural and built environment, including local infrastructure and services; and vi) All development proposals should be assessed for their compliance with the key environmental policies set out in the Core Strategy.
Policy SP5 2 - Meeting local housing needs	The Council will increase the supply of new housing the Borough by supporting new housebuilding schemes on sites in sustainable locations, with a focus on development within Borehamwood, Potters Bar and Bushey. Development proposals should ensure that any adverse effects on the built and natural environment are avoided and / or mitigated. The provision of adaptable and affordable homes for the local community will be sought in all locations and suitable proposals from social rented landlords will be supported, alongside the provision of affordable homes on privately developed sites.
Policy SP2 3 - A safe and inclusive environment	New development will be required to create places which are safe and secure, thereby reducing crime and the fear of crime. To achieve this, development will also be expected to contribute to the promotion of social inclusion by ensuring accessibility of key services to all sections of the community, including those with reduced levels of mobility.
Policy SP3 4 - Promoting healthier communities and leisure and cultural opportunities	Proposals which maintain and improve the stock of social, educational, sports and leisure facilities for the local community will be supported by the Council. Where development cannot take place within the limits of existing community infrastructure, additional local provision should be made on both allocated and windfall development sites.
Policy SP4 5 - Employment opportunities and economic development	The Council will support proposals which attract commercial investment, maintain economic competitiveness and provide employment opportunities for the local community. Development proposals should ensure that any adverse effects on the built and natural environment are avoided and / or mitigated. The provision of training opportunities for the local workforce will be encouraged and sought as part of new employment development in the Borough.

Policy	Description
Policy SP6 - Securing high quality design	The Council will require all development to be of a high quality design which is appropriate in scale to the local context and ensures the creation of attractive, usable, safe and accessible places. Development proposals will be expected to take advantage of opportunities to improve the character and quality of an area. The Council will also take account of the cumulative impacts of new development on the character and appearance of an area including the impact arising from residential intensification and redevelopment within residential areas.
Housing	
CS1 - The location and supply of new homes	<p>The Council will make provision for 4,200 Policy SP10 new homes (at an average annual housebuilding rate of 210 homes) in accordance with the requirements of the draft East of England Plan for the period 2001 – 2021 or any higher housing target set in the final Plan, up to a maximum of 5,000 new homes. In providing for a target of 4,200 homes and identifying new locations for development, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints and compliance with key environmental policies set out in the Core Strategy (including Policies CS11, CS12 and CS14 ii) the density of the surrounding area; iii) the need to retain existing housing; iv) the need to locate new development in the most accessible locations; v) the settlement hierarchy identified in the Hertsmere Core Strategy; and vi) the need to locate development within the boundaries of existing built-up areas. <p>The identification of land beyond existing built-up areas for any increased housing target should continue to be based on criteria (i) to (v) with any changes to the Green Belt boundaries made through the Site Allocations DPD and focuses principally on the Strategic Housing Growth Locations in Policy SP2.</p>
CS2 - Phasing of Housing Development	<p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policy CS1, the Council will make provision for:</p> <ul style="list-style-type: none"> - Up to 656 additional new homes in Phase 1 between April 2006 and March 2011 (equivalent to 219 homes per year) - Up to 848 additional new homes in Phase 2 between March 2011 and April 2016 (equivalent to 283 homes per year) - Up to 841 new homes in Phase 3 between March 2016 and April 2021 (equivalent to 280 homes per year)² <p>Should a total housing target of 5,000 homes be set in the East of England Plan, additional sites should be identified in the Site Allocations DPD to enable the provision of a further 103 homes in Phase 2 and 462 homes in Phase 3.</p>

² Annual equivalents may not tally due to rounding

Policy	Description
	Housing sites will be phased on this basis in the Site Allocations DPD to facilitate the required levels of housebuilding sought in the East of England Plan. Based on the findings of the Annual Monitoring Report, allocated land in later phases will be brought forward, where necessary, to maintain the five year supply of land for housing. In order to prevent the overdevelopment of housing in the Borough, the phasing and release of land allocated in the Site Allocations DPD will be reviewed where the number of units permitted on different sites, over any period of three years, significantly exceeds the maximum amounts sought over that period under the terms of this policy. Should the total East of England Plan housebuilding requirements be met during the Plan period, further residential development will not be permitted in the Borough where it results in the net development of more than 15 new units.
CS3 - Affordable Housing	In order to optimise the supply of affordable housing, developments involving more than 15 residential units, or residential sites of more than 0.5 hectares, should make provision for an element of affordable housing. The proportion of homes on each site which are affordable should comprise 40% of total proposed housing. A lower affordable housing requirement of 35% will be permitted where it can be demonstrated that a higher proportion cannot be realistically accommodated within a site or that it would jeopardise the viability of a scheme. On sites requiring the provision of affordable housing, and subject to other relevant DPD / Local Plan policies , the Council will seek to maximise the provision of affordable, rented accommodation with at least 75% of affordable homes to be provided in the form of social rented housing, managed through a Registered Social Landlord.
CS4 - Affordable housing in rural areas on exception sites	In all identified settlements in the Green Belt, as set out on the Core Strategy Key Diagram, the Council may permit the development of small scale affordable housing schemes as an exception to normal policies. Exception sites should be small in scale in relation to the size of settlements and such schemes should meet the identified needs of people local to the village or settlement, remain affordable in perpetuity and be managed by a Registered Social Landlord. Priority will be given to sites located on previously developed land within settlements and the scale of development should not exceed the level of need identified or have adverse effects on the natural and built environment .
CS5 - Gypsies and Travellers	The Council will work with neighbouring Local Authorities in south and west Hertfordshire to provide for the further needs of Gypsies and Travellers (as defined in Circular 01/06). On the basis of identified need within south and west Hertfordshire, the Council will seek to provide for any additional plots through the identification of land in the Site Allocations DPD. In identifying any required additional or extended sites, consideration will be based on a range of criteria including: <ul style="list-style-type: none"> i) a sequential site selection process with an emphasis on land which has been previously developed; ii) safe and convenient access to the primary road network with proximity to the major road network and without blocking any existing rights of way ; iii) avoiding prejudicing residential or rural amenity as a result of visual intrusion, excessive noise, lighting, traffic generation or activity at unsocial hours; iv) avoiding overdominating and respecting the size and scale of the nearest settled community;

Policy	Description
	<p>v) safe and acceptable environmental conditions within the site including the need to avoid air and noise pollution and significantly contaminated land;</p> <p>vi) an ability to receive essential services including water, sewerage, drainage and water disposal;</p> <p>vii) location within reasonable proximity to key local services; and</p> <p>viii) the potential for a site to be effectively landscaped and where necessary, an adequate buffer between the site and any nearby housing.</p> <p>x) the potential risk of flooding or the ability to mitigate this risk; and</p> <p>xi ensuring that any other adverse effects on the built and natural environment are avoided and / or mitigated including compliance with the key environmental policies set out in the Core Strategy (including Policies CS11, CS12 and CS14).</p>
CS6 - Housing Mix	<p>To help meet local housing needs, proposals for new housing should provide an appropriate mix of new homes in terms of housing size and type. Developers should ensure that: Development proposals will be permitted subject to the requirements of other relevant DPD / Local Plan policies, so long as:</p> <p>i) 100% of new homes on all sites are built to Lifetime Homes standards, with the exception of schemes involving the conversion of existing buildings resulting in six new units or less;</p> <p>ii) Housing developments in excess of 10 units contain sufficient variation within their housing mix, with sites of at least 25 units or 1 hectare reflecting identified variation within the Borough's housing need; and</p> <p>iii) On particularly large development sites, a proportion of sheltered housing is provided as part of the overall housing mix.</p> <p>The Council will seek to identify land, through the Site Allocations DPD, where sheltered housing can be included as part of any future development.</p>
Economy	
CS7 - Scale and distribution of employment land	<p>In order to encourage economic development and promote a competitive local economy, provision will be made for the supply of at least xx ha of designated employment land for B-class development within the Borough up to 2021, focused on the following locations and as identified on the Key Diagram:</p> <p><u>Employment Areas</u></p> <ul style="list-style-type: none"> • Elstree Way, Borehamwood • Stirling Way, Borehamwood • Cranborne Road, Potters Bar • Station Close, Potters Bar • Otterspool Way, Bushey <p><u>Key Employment Site</u></p> <ul style="list-style-type: none"> • Centennial Park, Elstree

Policy	Description
	<p>The boundaries of these locations will be clarified in the Site Allocations DPD including the release of existing sites within these areas for new housing or housing-led mixed-use development where appropriate. Any release of designated employment land for housing-led or mixed-used development, during the plan period, will be based on an assessment of whether:</p> <ul style="list-style-type: none"> i) there is any realistic prospect of that land being developed or occupied for employment purposes during the plan period; ii) the development of a particular site during the plan period would lead to an over-supply of housing; iii) the environmental, locational and physical characteristics of the current site or use are appropriate for continued employment use; iv) an acceptable environment can be provided for housing-led development, including its impact on local traffic levels; v) a housing-led development would prejudice the ability of nearby businesses to operate; and whether vi) the employment land release would prejudice the implementation of the Elstree Way Corridor Planning and Design Brief and other Council economic development and regeneration strategies. <p>vii) any adverse effects on the built and natural environment can be avoided, mitigated and/or compensated.</p>
CS8 - Local significant employment sites	<p>In order to sustain a competitive local economy with good access to employment for the local population, the Council will seek to maintain a supply of smaller, business units across the Borough. The Council will work with key partners, including the South West Hertfordshire Business Partnership and local Chambers of Commerce, to identify Local Significant Employment Sites subject to the provisions of Policies CS21, CS22 and other relevant DPD / Local Plan environmental policies. These sites will comprise economically viable business accommodation over 0.25 hectares with satisfactory access, parking and environmental conditions, for B-class and other identified, employment generating uses. Any redevelopment of a Locally Significant Employment Site for housing or other development will be based on an assessment of the criteria in Policy CS7.</p>
CS9 - Land use within employment areas	<p>Activities within designated Employment Areas will be limited to office, industrial, warehousing and other B-class uses. Any new office development exceeding 2,500 sq m within Employment Areas will be limited to the Elstree Way, Borehamwood Employment Area, subject to meeting environmental and other relevant DPD / Local Plan Policies.</p> <p>Certain other uses will also be permitted within Employment Areas, comprising waste management, builders merchants, film / television studios and production, and car dealerships and trade counter operations where the extent of any (non-trade) retail or sales activity display remains ancillary to the principal use of the site. All development should meet the requirements of Policies CS11 and CS14 to ensure that potential contamination is minimised and remediated.</p>
CS10 - Promoting film and television production in Hertsmere	<p>To promote the retention and growth of the film and television production industry in the Borough, the Council will support proposals relating to film and television production and ancillary or associated uses in Borehamwood. Proposals to refurbish and upgrade the Elstree Film Studios and BBC Elstree Centre will be supported subject to environmental constraints and other relevant policies.</p>
	<p>In order to facilitate the operational requirements of the film and television production industry, the Council will also seek to make a Local Development Order (LDO) on the principal studio sites. The LDO will grant permission for future, small-scale changes within these sites relating to their primary use as locations for film and television production.</p>
Open Land and Environment	
CS11 — Protection and enhancement of the natural and historic environment	<p>All development proposals must conserve and enhance the historic and natural environment, landscape character and bio-diversity in order to maintain and improve environmental quality. Development proposals should be designed to a high quality and not result in significant harm to the openness and appearance of the Green Belt and to identified, protected sites of ecological, geological, historic or archaeological</p>

Policy	Description
	<p>value and will not be permitted unless:</p> <ul style="list-style-type: none"> ii) there is an over-riding need for the development in the public interest – which clearly outweighs the conservation value of the site; iii) no suitable alternative sites exists to accommodate the development; iv) adequate mitigation and/or compensatory measures are provided; v) in the case of the highest quality agricultural land (Grades 1, 2 and 3a) and Preferred Areas of mineral extraction, there is no likelihood of the land being sterilised.
CS11 - Protection and Enhancement of the Natural Environment	All development proposals must conserve and enhance the natural environment of the Borough, including biodiversity, landscape character and sites of ecological and geological value, in order to maintain and improve environmental quality. Development proposals should provide opportunities for habitat creation and enhancement. There will be a presumption against development which causes harm to the openness and appearance of the Green Belt, as defined in PPG2 (Green Belts) and in the case of the highest quality agricultural land (Grades 1, 2 and 3a) and Preferred Areas of mineral extraction, proposals will only be permitted where there is no likelihood of the land being sterilised.
CS12 - Protection and enhancement of historic assets	All development proposals must conserve and enhance the historic environment of the Borough in order to maintain and improve local environmental quality. Development proposals should be sensitively designed to a high quality and not cause significant harm to identified, protected sites or locations of historic or archaeological value including Conservation Areas, Listed Buildings, Historic Parks and Gardens, Scheduled Ancient Monuments and Archaeological Remains.
CS12 3 - Promoting recreation access to the countryside	<p>The Council will work with its partners and relevant agencies to safeguard, enhance and facilitate access to the local countryside. Measures which secure the provision of safer and more secure car-free access to Watling Chase Community Forest Gateway Sites, Historic Parks and Gardens and countryside attractions will be actively sought where they do not present a risk to the biodiversity value and intrinsic environmental quality of the locality. The provision of or enhancement of visitor facilities in the countryside will be encouraged where this:</p> <ul style="list-style-type: none"> i) specifically enhances access for the local population ii) does not harm the character, appearance and openness of the Green Belt, landscape and wider countryside; iii) does not cause or add significantly to local road congestion; and iv) will ensure that biodiversity is protected and enhanced in accordance with Policy CS11.
CS13 4 - Environmental Impact of new development	<p>The Council will work with key partners, including the Environment Agency and Natural England, to ensure that development proposals do not create an unacceptable level of risk from the impact of natural forces or human activity on occupiers of a site, the local community and the wider environment. Proposals must take particular account of the need to: Development proposals should take account of the guidance set out in the Hertfordshire County Council Guide Building Futures. Proposals will be required to incorporate sustainability principles, minimising their impact on the environment and ensuring prudent use of natural resources by:</p> <ul style="list-style-type: none"> (i) Avoiding development in the floodplain unless flood prevention/mitigation measures are in place as required by the Environment Agency; (ii) Ensuring that developments larger than 1,000 sqm or 10 new homes will be required to include measures to offset 10% of total predicted carbon emissions through a combination of sustainable design and construction and on-site renewable energy generation; (iii) Minimising water consumption through measures such as water saving devices and incorporating the use of Sustainable

Policy	Description
	<p>Urban Drainage Systems (SUDS);</p> <ul style="list-style-type: none"> (iv) Ensuring that pollutants are minimised (including emissions to air, water, soil, light and noise); (v) Remediating land affected by contamination; (vi) Ensuring efficient use is made of natural resources through their layout, design and construction, including locally sourced materials where possible; (vii) Achieving reduced levels of energy consumption and the use of energy from renewable resources; (viii) Making provision for waste minimisation and recycling within the development; and (ix) Seeking to achieve BREEAM / Ecohome 'very good' or 'excellent' category within residential developments. <p>Development proposals must demonstrate that they accord with Policy CS11 and that any adverse effects can be overcome by appropriate alleviation and mitigation, which are capable of being secured through planning conditions or an obligation in accordance with Policy CS18.</p> <p>To facilitate waste minimisation and recycling, the Council will support the development of on-site recycling facilities and new sources of renewable energy generation where there is no adverse environmental impact on nearby communities.</p> <ul style="list-style-type: none"> i) mitigate the potential adverse effects of climate change; ii) ensure adequate protection from the risk of on and off-site flooding; iii) avoid or mitigate the effects of pollution from noise, lighting, odours and other emissions; and iv) ensure that land and buildings are free from contamination which might adversely affect human health or the environment. <p>Development proposals must demonstrate that any adverse effects can be overcome by appropriate alleviation and mitigation, which are capable of being secured through planning conditions or an obligation.</p>
CS14 – Efficient use of natural resources	<p>Development proposals should ensure that efficient use is made of natural resources through their layout, design, construction and measures for waste disposal, by incorporating conservation measures and by making the best use of renewable resources. Developments larger than 1,000 sq m or 10 new homes will be required to include measures to off-set 10% of total predicted carbon emissions through a combination of sustainable design and construction and on-site renewable energy generation.</p> <p>To facilitate these requirements, the Council will support the development of on-site recycling facilities and new sources of renewable energy generation where there is no adverse environmental impact on nearby communities. -</p>
Building Sustainable Communities	
CS15 - Access to services	<p>The Council will work with local service providers to facilitate their stated land use and buildings requirements through the identification of mixed-use development opportunities in the Site Allocations DPD. The Council will also require new development to contribute to the Community Strategy aim of ensuring fair access to services and the wider goal of creating a safer and more sustainable environment. New proposals will be assessed against their impact on existing local infrastructure, services and resources and where necessary, new provision should be made as part of the development in order to meet or fund any shortfall having regard to the provision of Policy CS18.</p>

Policy	Description
CS16 - Key community facilities	<p>Proposals for the provision or dual use of key community facilities including educational, healthcare and recreational facilities will be supported, subject to any environmental constraints and other relevant policies. Their loss, reduction or displacement will not be permitted unless it can be demonstrated that they are genuinely surplus and that any replacement accommodation is satisfactory for all of its users having regard to the provisions of Policy CS18.</p> <p>The conversion or redevelopment of residential properties for healthcare and elderly care will not be considered appropriate unless it can be demonstrated that there are no other suitable sites or buildings within the service provider catchment.</p>
CS17 - Securing mixed use development	<p>Mixed-development will be sought on major development sites in Borehamwood and Potters Bar town centres and in any other locations capable of satisfactorily accommodating a range of uses. The ability of any site to accommodate a mix of uses will be assessed on:</p> <ul style="list-style-type: none"> i) the need for additional services and facilities in an area; ii) the potential to create linkages with other nearby land uses; iii) public transport accessibility and local road capacity; and iv) the impact on the environment within and around the development site. <p>The Council will work in partnership with local service providers, Parish and Town Councils and local community groups, in order to identify the need for additional services and facilities.</p>
CS18 - Planning tariff and obligations	<p>Provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, will be secured through a fixed tariff on the approval of each new home. The tariff will be set at a suitable level to ensure that the development of new housing does not adversely affect existing facilities and services, having regard to the viability of developing land in the Borough.</p> <p>The provision of affordable housing together with on and off-site facilities, training, services and improvements necessitated by new commercial development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>Specific details on arrangements for securing a planning tariff and planning obligation will be set out in the Planning Tariffs and Obligations Supplementary Planning Document.</p>
CS19 - Physically Accessible buildings	<p>All new development should be designed to ensure that buildings and land within their curtilage are fully accessible to groups with special mobility requirements. 100% of new residential units should be built to the Lifetime Homes Standards highlighted in the Council's Planning and Design Guide Supplementary Planning Document. The proportion of wheelchair accessible homes on new residential redevelopments of 15 or more units will be considered on a site by site basis, having regard to current needs in the Borough.</p>
CS20 - Development and accessibility	<p>The Council will work towards Hertfordshire County Council's vision of providing a safe, efficient and affordable transport system that allows access for all the everyday facilities. To obtain the best use of the existing highway network, major trip generating development should be focused in areas of increased public transport accessibility, as indicated on the Key Map. Major commercial developments will only be permitted where:</p> <ul style="list-style-type: none"> i) it does not conflict with the Transport Objectives of the Hertfordshire Local Transport Plan (2006 – 2011) and associated Accessibility Strategy;

Policy	Description
	<ul style="list-style-type: none"> ii) it is accompanied by a suitable Travel Plan, prepared in accordance with guidance set out in the Parking Supplementary Planning Document; iii) it is in accordance with Hertfordshire County Council guidance and relevant Local Plan / Development Plan Document policies relating to the operation of the Highways network and the achievement of vehicular and pedestrian safety; and iv) it contributes, where appropriate, to the provision or funding of new or improved public transport, pedestrian and cycle routes.
CS21 - Accessibility and parking	<p>In order to facilitate fair access to local services, the quantity of off-street parking for all modes of transport, to be provided at new developments, will be based on an assessment of:</p> <ul style="list-style-type: none"> i) a site's location; ii) local car ownership; iii) the proposed land use (having regard to Table 14 for residential development); iv) the Accessibility Zones for the Borough; and v) the provisions of any Travel Plan submitted <p>together with the detailed criteria set out in the Parking Supplementary Planning Document.</p>
CS22 - Promoting alternatives to the car	<p>The Council will support a wide range of measures to provide safe and reliable alternatives to the car for accessing new development and other destinations across the Borough including:</p> <ul style="list-style-type: none"> i) improved public transport facilities; ii) additional public transport routes and stops; iii) enhanced and new non-motorised links within and between urban and rural areas, along or additional to the existing Rights of Way and highways network, which increase walking, cycling or riding opportunities; and iv) the safeguarding of proposed non-motorised routes, where necessary, to prevent development occurring which would prevent their implementation. <p>New developments will be assessed in terms of their accessibility by a range of transport modes and where appropriate, measures to promote alternatives to the car will need to be provided as part of a proposed scheme.</p>
CS23 - Town Centre Strategy	<p>Development within the designated town, district or neighbourhood centres of Borehamwood, Potters Bar, Bushey and Radlett will be permitted provided that it maintains their primary retail function and wider role as a focus for business, leisure, cultural and other appropriate town centre uses. Proposals to create in excess of 2,500 sq m of new retail floorspace should be focused on Borehamwood and Darkes Lane, Potters Bar town centres and will only be permitted where a clear quantitative need has been established and where it can be demonstrated that it would not harm any existing shopping centre.</p>

Policy	Description
CS24 - Strengthening Town Centres	The retail function and vitality of designated centres will be reinforced through the designation of primary and secondary shopping frontages in Borehamwood, Potters Bar, Bushey and Radlett. There will be a focus on (A1) retail uses within the primary frontages and scope for a wider range of activities in secondary frontages, with an emphasis on a mix of (A1) retail, (A2) financial and professional services and (A3) dining-in establishments. An appropriate proportion of other uses will also be permitted in secondary frontages, including (A4) pubs and bars and (A5) take away uses, together with other appropriate town centre uses open to visiting member of the public. Details of frontages and uses will be set out in the Site Allocations DPD.
CS25 - Retail and commercial development in Shenley	<p>Small scale retail and commercial development in Shenley should be restricted to suitable sites within the following, existing commercial areas and as defined in the Shenley Parish Plan:</p> <ul style="list-style-type: none"> • Along London Road in the south east of the village; and • At Andrew Close and the nearby junction between London Road and Porters Park Drive (excluding the reserve school site). <p>Such development should be appropriate in size and scale to the size of the settlement and of a scale which primarily serves the local community rather than drawing in large numbers of visitors.</p>
CS26 - Safe and attractive evening economy	The Council wishes to promote a range of uses in town centres which result in a balanced evening economy including entertainment and late night retailing as well as eating and drinking establishments. The quantity, type and location of A3, A4, A5 and other evening or late night uses will be controlled, having regard to other Local Plan and Development Plan Document policies, together with the aims and objectives of the Crime, Disorder and Drugs Reduction Strategy for Hertsmere. In relation to those areas where concentrations of drinking establishments, night clubs or other evening or late night uses have caused existing anti-social problems, there will be a presumption against further consents for such uses.

Table F.2 - Core Strategy Policies (April 2007)

Policy	Description	Revised Policies April 2007
Strategic Spatial Policies		
Policy SP1 - Improving and sustaining the quality of the local environment	<p>SP1 amended:</p> <p>Policy SP1 Creating sustainable development</p> <p>The Council will require all development to make a sustainable contribution to delivering the Core Strategy Spatial Vision and Strategy. Accordingly new development will be required to:</p> <ul style="list-style-type: none"> i) Make efficient use of brownfield land within hierarchy of settlements as shown on the key diagram; ii) Ensure a healthy living environment to residents and other users of a development ; iii) Seek to mitigate the environmental impact of transport by promoting alternatives to the car; iv) Be constructed and operated using a minimum amount of non-renewable resources and be required to reduce the use of energy; v) Avoid prejudicing, either individually or cumulatively, characteristics and features of the natural and built environment, including local infrastructure and services; vi) All development proposals should be assessed for their compliance with the key environmental policies set out in the Core Strategy; and vii) Offset the impact on local infrastructure 	No significant changes. Taken on board SA recommendations.
Policy SP2 - A safe and inclusive environment	New development will be required to create places which are safe and secure, thereby reducing crime and the fear of crime. To achieve this, development will also be expected to contribute to the promotion of social inclusion by ensuring accessibility of key services to all sections of the community, including those with reduced levels of mobility.	<p>Now become SP3</p> <p>New development will be required to create places which are safe and secure, thereby reducing crime and the fear of crime. To achieve this, development will also be expected to promote accessibility to key services to all sections of the community, including those with reduced levels of mobility.</p>
Policy SP3 - Promoting healthier communities and leisure and cultural opportunities	Proposals which maintain and improve the stock of social, educational, sports and leisure facilities for the local community will be supported by the Council. Where development cannot take place within the limits of existing community infrastructure, additional local provision should be made on both allocated and windfall development sites	<p>Now become SP4</p> <p>No significant changes.</p>

Policy	Description	Revised Policies April 2007
Policy SP4 - Employment opportunities and economic development	The Council will support proposals which attract commercial investment, maintain economic competitiveness and provide employment opportunities for the local community. The provision of training opportunities for the local workforce will be encouraged and sought as part of new employment development in the Borough.	Now become SP5 No significant changes.
Policy SP5 - Meeting local housing needs	The Council will increase the supply of new housing the Borough by supporting new housebuilding schemes on sites in sustainable locations, with a focus on development within Borehamwood, Potters Bar and Bushey. The provision of adaptable and affordable homes for the local community will be sought in all locations and suitable proposals from social rented landlords will be supported, alongside the provision of affordable homes on privately developed sites.	Now reordered to become SP2: The Council will support new housebuilding schemes on sites in sustainable locations, with a focus on development within the three Strategic Housing Locations of Borehamwood, Potters Bar and Bushey. Unless there are exceptional circumstances, no more than 40% of new housing will be sought in Borehamwood, up to 30% in Potters Bar, up to 30% in Bushey and up to 15% in Radlett and other suitable locations. Development proposals should ensure that any adverse effects on the built and natural environment are avoided and / or mitigated. Windfall developments will be supported on appropriate sites in all towns, subject to the environmental constraints and requirements of Policies SP1, CS 12, 14, 15 and other relevant planning policies. The provision of adaptable and affordably priced homes for the local community will be sought in all locations and suitable proposals from social rented landlords will be supported, where required, on qualifying development sites.
		New Policy SP6: securing high quality design The Council will require all development to be of high quality design which is appropriate in scale to the local context and ensures the creation of attractive, usable, safe and accessible places. Development proposals will be expected to take advantage of opportunities to improve the character and quality of an area. The Council will also take account of the cumulative impact of new development on the character and appearance of an area including the impact arising from residential intensification and redevelopment within residential areas.
Housing		
CS1 - The location and supply of new homes	The Council will make provision for 4,200 new homes (at an average annual housebuilding rate of 210 homes) in accordance with the requirements of the draft East of England Plan for the period 2001 – 2021 or any higher housing target set in the final Plan, up to a maximum of 5,000 new homes. In providing for a target of	The Council will make provision for 5,000 new homes (at an average annual housebuilding rate of 250 homes) should this represent the housing requirement in the finalised East of England Plan for the period 2001 – 2021 or any higher housing target set in

Policy	Description	Revised Policies April 2007
	<p>4,200 homes and identifying new locations for development, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints; ii) the density of the surrounding area; iii) the need to retain existing housing; iv) the need to locate new development in the most accessible locations; v) the settlement hierarchy identified in the Hertsmere Core Strategy; and vi) the need to locate development within the boundaries of existing built-up areas. <p>The identification of land beyond existing built-up areas for any increased housing target should continue to be based on criteria (i) to (v).</p>	<p>the final Plan, up to a maximum of 5,000 new homes. In providing for a target of 4,200 homes and identifying new locations for development, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints and compliance with the key environmental policies set out in the Core Strategy (including Policies CS11, CS12 and CS14); ii) the density of the surrounding area; iii) the need to retain existing housing; iv) the need to locate new development in the most accessible locations; v) the settlement hierarchy identified in the Hertsmere Core Strategy; and vi) the need to focus development within the boundaries of existing built-up areas.

Policy	Description	Revised Policies April 2007
		<p>New Policy CS2: Housing beyond existing built up areas: Changes to Green Belt boundaries to accommodate up to 550 new homes at an overall density of 40 dwellings per hectare will be focused on sites to be identified through the Site Allocations DPD within any of the following preferred areas, as illustrated on the Key Diagram:</p> <p><u>Borehamwood:</u></p> <ul style="list-style-type: none"> • Land to the west of Cowley Hill and Rowley Lane • Land to the north of Barnet Lane between Furzehill Road and Hartfield Avenue • Potters Bar: • Land between Dugdale Hill Lane and Barnet Road • Land at Potters Bar Golf Club • Land to the north and south of Mutton Lane • Land between Southgate Road and the Borough boundary, south of Conningsby Drive <p>The identification of individual sites will be based on a range of criteria including (but not restricted to):</p> <ol style="list-style-type: none"> i) Air quality; ii) Noise; iii) Transport impact; iv) Flood risk; v) Nature conservation value; vi) Landscape conservation value vii) Agricultural land quality; and viii) Accessibility to public transport and essential services

<p>CS2 - Phasing of Housing Development</p>	<p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policy CS1, the Council will make provision for:</p> <ul style="list-style-type: none"> - Up to 656 additional new homes in Phase 1 between April 2006 and March 2011 (equivalent to 219 homes per year) - Up to 848 additional new homes in Phase 2 between March 2011 and April 2016 (equivalent to 283 homes per year) - Up to 841 new homes in Phase 3 between March 2016 and April 2021 (equivalent to 280 homes per year)³ <p>Should a total housing target of 5,000 homes be set in the East of England Plan, additional sites should be identified in the Site Allocations DPD to enable the provision of a further 103 homes in Phase 2 and 462 homes in Phase 3.</p> <p>Housing sites will be phased on this basis in the Site Allocations DPD to facilitate the required levels of housebuilding sought in the East of England Plan. Based on the findings of the Annual Monitoring Report, allocated land in later phases will be brought forward, where necessary, to maintain the five year supply of land for housing. In order to prevent the overdevelopment of housing in the Borough, the phasing and release of land allocated in the Site Allocations DPD will be reviewed where the number of units permitted on different sites, over any period of three years, significantly exceeds the maximum amounts sought over that period under the terms of this policy. Should the total East of England Plan housebuilding requirements be met during the Plan period, further residential development will not be permitted in the Borough where it results in the net development of more than 15 new units.</p>	<p>CS3: Phasing of Development</p> <p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policies CS1 and CS2, the Council will permit the following levels of new housing development, measured from the start of the plan period:</p> <ul style="list-style-type: none"> • Phase 1: Up to 2,740 new homes by March 2011 (equivalent to 330 homes per year between April 2006 and March 2011) • Phase 2: Up to 3,690 new homes by March 2016 (equivalent to 190 homes per year between April 2011 and March 2016) • Phase 3: Up to 5,000 new homes by March 2021 (equivalent to 262 homes per year between April 2016 and March 2021) <p>Housing sites will be phased on this basis in the Site Allocations DPD to facilitate the required levels of housebuilding sought in the East of England Plan. Based on the findings of Annual Monitoring Reports, allocated land in later phases will be brought forward, if necessary, to maintain the five year supply of land for housing. Additional greenfield sites should be identified in the Site Allocations DPD to enable the provision of a further 100 homes in Phase 2 and 465 homes in Phase 3, within the overall housing totals sought within those phases. In order to prevent the overdevelopment of housing in the Borough ahead of required infrastructure and community facilities, outstanding residential land allocations and residential proposals of 25 units (net) or more will not be permitted where the number of projected completions, as detailed in Annual Monitoring Report housing trajectory, is forecast to exceed either the annualised phasing sought under the terms of this policy by 20% in the forthcoming three years; or a final target of 5,000 homes in the East of Eland before 2021</p>
---	--	---

Policy	Description	Revised Policies April 2007
CS3 - Affordable Housing	<p>In order to optimise the supply of Affordable Housing, developments involving more than 15 residential units, or residential sites of more than 0.5 hectares, in Borehamwood, Bushey, Potters Bar, Radlett and other accessible locations, should make provision for an element of affordable housing.</p> <p>The proportion of homes on each site which are affordable should comprise 40% of total proposed housing. A lower affordable housing requirement of 35% will be permitted where it can be demonstrated that a higher proportion cannot be realistically accommodated within a site or that it would jeopardise the viability of a scheme.</p> <p>On sites requiring the provision of affordable housing and subject to other relevant DPD / Local Plan policies, the Council will seek to maximise the provision of affordable, rented accommodation with at least 75% of Affordable Homes to be provided in the form of social rented housing, managed through a Registered Social Landlord.</p>	<p>Policy CS4 Affordable Housing</p> <p>In order to optimise the supply of Affordable Housing, developments involving more than 15 residential units, or residential sites of more than 0.5 hectares, in Borehamwood, Bushey, Potters Bar, Radlett and other accessible locations, should make provision for an element of affordable housing.</p> <p>The Council will continue to seek the provision of at least 25% on qualifying sites, pending the finalisation of Affordable Housing requirements in the East of England Plan, equating to an overall Affordable Housing target of 840 homes (out of an overall housing target of 5,000 homes).</p> <p>On sites requiring the provision of affordable housing and subject to other relevant DPD / Local Plan policies, the Council will seek to maximise the provision of affordable, rented accommodation with at least 75% of Affordable Homes to be provided in the form of social rented housing, managed through a Registered Social Landlord.</p>
CS4 - Affordable housing in rural areas on exception sites	<p>In all identified settlements in the Green Belt, as set out on the Core Strategy Key Diagram, the Council may permit the development of small scale affordable housing schemes as an exception to normal policies. Such schemes should meet the identified needs of people local to the village or settlement, remain affordable in perpetuity and be managed by a Registered Social Landlord. Priority will be given to sites located on previously developed land within settlements and the scale of development should not exceed the level of need identified.</p>	<p>Policy CS5 Affordable housing in rural areas on exception sites</p> <p>No significant changes.</p>
CS5 - Gypsies and Travellers	<p>The Council will work with neighbouring Local Authorities in south and west Hertfordshire to provide for the further needs of Gypsies and Travellers (as defined in Circular 01/06). On the basis of identified need within south and west Hertfordshire, the Council will seek to provide for any additional plots through the identification of land in the Site Allocations DPD. In identifying any required additional or extended sites, consideration will be based on a range of criteria including:</p>	<p>CS6 Gypsy and Traveller Sites</p> <p>No significant changes. Taken on board SA recommendations.</p>
	<p>i) a sequential site selection process with an emphasis on land which has been previously developed;</p>	

³ Annual equivalents may not tally due to rounding

Policy	Description	Revised Policies April 2007
	<ul style="list-style-type: none"> ii) safe and convenient access to the primary road network with proximity to the major road network and without blocking any existing rights of way ; iii) avoiding prejudicing residential or rural amenity as a result of visual intrusion, excessive noise, lighting, traffic generation or activity at unsocial hours; iv) avoiding overdominating and respecting the size and scale of the nearest settled community; v) safe and acceptable environmental conditions within the site including the need to avoid air and noise pollution and significantly contaminated land; vi) an ability to receive essential services including water, sewerage, drainage and water disposal; vii) location within reasonable proximity to key local services; and viii) the potential for a site to be effectively landscaped and where necessary, an adequate buffer between the site and any nearby housing. 	
CS6 - Housing Mix	<p>To help meet local housing needs, proposals for new housing should provide an appropriate mix of new homes in terms of housing size and type. Developers should ensure that:</p> <ul style="list-style-type: none"> i) 100% of new homes on all sites are built to Lifetime Homes standards, with the exception of schemes involving the conversion of existing buildings resulting in six new units or less; iii) Housing developments in excess of 10 units contain sufficient variation within their housing mix, with sites of at least 25 units or 1 hectare reflecting identified variation within the Borough's housing need; and 	<p>CS7 - Housing Mix</p> <p>To help meet local housing needs, proposals for new housing should provide an appropriate mix of new homes in terms of housing size and type. Development proposals will be permitted, subject to the requirements of other relevant DPD / Local Plan policies, so long as:</p> <ul style="list-style-type: none"> i) Housing developments in excess of 10 units (gross) contain some variation within their housing mix, with sites over 25 units or 1 hectare reflecting identified variation within the Borough's housing need, subject to proposals respecting the prevailing character of the area; and
	<ul style="list-style-type: none"> iii) On particularly large development sites, a proportion of sheltered housing is provided as part of the overall housing mix. <p>The Council will seek to identify land, through the Site Allocations DPD, where sheltered housing can be included as part of any future development</p>	<ul style="list-style-type: none"> ii) On development sites of 100 or more units (gross), a proportion of sheltered housing is provided as part of the overall housing mix.
CS7 - Scale and distribution of employment land	<p>In order to encourage economic development and promote a competitive local economy, provision will be made for the supply of at least xx ha of designated employment land for B-class development within the Borough up to 2021, focused on the following locations and as identified on the Key Diagram:</p>	<p>Policy CS8 Scale and distribution of employment land</p> <p>In order to encourage economic development and promote a competitive local economy, provision will be made for the supply of at least 102ha of designated employment land for B-class</p>

Policy	Description	Revised Policies April 2007
	<p><u>Employment Areas</u></p> <ul style="list-style-type: none"> • Elstree Way, Borehamwood • Stirling Way, Borehamwood • Cranborne Road, Potters Bar • Station Close, Potters Bar • Otterspool Way, Bushey <p><u>Key Employment Site</u></p> <ul style="list-style-type: none"> • Centennial Park, Elstree <p>The boundaries of these locations will be clarified in the Site Allocations DPD including the release of existing sites within these areas for new housing or housing-led mixed-use development where appropriate. Any release of designated employment land for housing-led or mixed-used development, during the plan period, will be based on an assessment of whether:</p> <ol style="list-style-type: none"> an acceptable environment can be provided for housing-led development, including its impact on local traffic levels; a housing-led development would prejudice the ability of nearby businesses to operate; 	<p>development within the Borough up to 2021, focused on the following locations and as identified on the Key Diagram:</p> <ul style="list-style-type: none"> • Employment Areas • Elstree Way, Borehamwood • Stirling Way, Borehamwood • Cranborne Road, Potters Bar • Station Close, Potters Bar • Otterspool Way, Bushey <p><u>Key Employment Site</u></p> <ul style="list-style-type: none"> • Centennial Park, Elstree <p>The boundaries of these locations will be clarified in the Site Allocations DPD including the limited release of up to 4 hectares of previously designated land within the Elstree Way Employment Area for new housing or housing-led mixed-use development where appropriate. The precise boundary of individual sites to be released will be based on an assessment of whether:</p> <ol style="list-style-type: none"> an acceptable environment can be provided for housing-led development, including its impact on local traffic levels;
	<ol style="list-style-type: none"> the employment land release would prejudice the implementation of the Elstree Way Corridor Planning and Design Brief and other Council economic development and regeneration strategies; and whether any adverse effects on the built and natural environment can be avoided, mitigated and/or compensated 	<ol style="list-style-type: none"> a housing-led development would prejudice the ability of nearby businesses to operate; the employment land release would prejudice the implementation of the Elstree Way Corridor Planning and Design Brief and other Council economic development and regeneration strategies; and whether any adverse effects on the built and natural environment can be avoided, mitigated and/or compensated
CS8 - Local significant employment sites	In order to sustain a competitive local economy with good access to employment for the local population, the Council will seek to maintain a supply of smaller, business units across the Borough. The Council will work with key partners, including the South West Hertfordshire Business Partnership and local Chambers of Commerce, to identify Local Significant Employment Sites. These sites will comprise economically viable business accommodation over 0.25 hectares with satisfactory access, parking and environmental conditions, for B-class and other	Policy CS9 Local Significant Employment Sites No significant changes.

Policy	Description	Revised Policies April 2007
	identified, employment generating uses. Any redevelopment of a Locally Significant Employment Site for housing or other development will be based on an assessment of the criteria in Policy CS7.	
CS9 - Land use within employment areas	Activities within designated Employment Areas will be limited to office, industrial, warehousing and other B-class uses. Any new office development exceeding 2,500 sq m within Employment Areas will be limited to the Elstree Way, Borehamwood Employment Area, subject to meeting environmental and other relevant DPD / Local Plan Policies. Certain other uses will also be permitted within Employment Areas, comprising waste management, builders merchants, film / television studios and production, and car dealerships and trade counter operations where the extent of any (non-trade) retail or sales activity display remains ancillary to the principal use of the site.	CS ¹⁰ Land Use within employment areas. No significant changes.
CS10 - Promoting film and television production in Hertsmere	To promote the retention and growth of the film and television production industry in the Borough, the Council will support proposals relating to film and television production and ancillary or associated uses in	Policy CS ¹¹ Promoting film and television production in Hertsmere No significant changes.
	Borehamwood. Proposals to refurbish and upgrade the Elstree Film Studios and BBC Elstree Centre will be supported subject to environmental constraints and other relevant policies. In order to facilitate the operational requirements of the film and television production industry, the Council will also seek to make a Local Development Order (LDO) on the principal studio sites. The LDO will grant permission for future, small-scale changes within these sites relating to their primary use as locations for film and television production.	
Open Land and Environment		
CS11 - Protection and enhancement of the natural and historic environment	All development proposals must conserve and enhance the historic and natural environment, landscape character and bio-diversity in order to maintain and improve environmental quality. Development proposals should be designed to a high quality and not result in significant harm to the openness and appearance of the Green Belt and to identified, protected sites of ecological, geological, historic or archaeological value and will not be permitted unless: i) there is an over-riding need for the development in the public interest which clearly outweighs the conservation value of the site; ii) no suitable alternative sites exists to accommodate the development;	Policy CS ¹² Protection and enhancement of the natural environment No significant changes. Taken on board SAR recommendations.

Policy	Description	Revised Policies April 2007
	<p>iii) adequate mitigation and/or compensatory measures are provided; in the case of the highest quality agricultural land (Grades 1, 2 and 3a) and Preferred Areas of mineral extraction, there is no likelihood of the land being sterilised.</p>	
	<p>New Policy CS13 Protection and enhancement of historic assets</p> <p>All development proposals must conserve and enhance the historic environment of the Borough in order to maintain and improve local environmental quality. Development proposals should be sensitively designed to a high quality and not cause harm to identified, protected sites or locations of historic or archaeological value including Conservation Areas, Listed Buildings, Historic Parks and Gardens, Scheduled Ancient Monuments and Archaeological Remains.</p>	<p>New Policy CS¹³ Protection and enhancement of historic assets</p> <p>No significant changes. Taken on board SA recommendations.</p>
CS12 - Promoting recreation access to the countryside	<p>The Council will work with its partners and relevant agencies to safeguard, enhance and facilitate access to the local countryside. Measures which secure the provision of safer and more secure car-free access to Watling Chase Community Forest Gateway Sites, Historic Parks and Gardens and countryside attractions will be actively sought. The provision of or enhancement of visitor facilities in the countryside will be encouraged where this:</p> <ul style="list-style-type: none"> i) specifically enhances access for the local population ii) does not harm the character, appearance and openness of the Green Belt; and iii) does not cause or add significantly to local road congestion. 	<p>Policy CS¹⁴ Promoting recreational access to open spaces and the countryside</p> <p>No significant changes. Taken on board SA recommendations.</p>
CS13 - Environmental Impact of new development	<p>The Council will work with key partners, including the Environment Agency and Natural England, to ensure that development proposals do not create an unacceptable level of risk on occupiers of a site, the local community and the wider environment.</p> <p>Development proposals should take account of the guidance set out in the Hertfordshire County Council guide 'Building Futures'. Proposals will be required to incorporate sustainability principles, minimising their impact on the environment and ensuring prudent use of natural resources by:</p> <ul style="list-style-type: none"> i) Avoiding development in the floodplain unless flood prevention/mitigation measures are in place as required by the Environment Agency; ii) Ensuring that developments larger than 1,000 sq m or 10 new homes will be required to include measures to offset at least 10% of total predicted carbon emissions through a combination of sustainable design and construction and 	<p>Policy CS¹⁵ Environmental impact of development</p> <p>No significant changes. Taken on board SA recommendations.</p>

Policy	Description	Revised Policies April 2007
	<p>on-site renewable energy generation;</p> <p>iii) Minimising water consumption through measures such as water saving devices and incorporating the use of Sustainable Urban Drainage Systems (SUDS);</p> <p>iv) Ensuring that pollutants are minimised (including emissions to air, water, soil, light and noise);</p>	
	<p>v) Remediating land affected by contamination;</p> <p>vi) Ensuring efficient use is made of natural resources through their layout, design and construction, including locally sourced materials where possible;</p> <p>vii) Achieving reduced levels of energy consumption and the use of energy from renewable resources;</p> <p>viii) Making provision for waste minimisation and recycling within the development; and</p> <p>ix) Seeking to exceed the minimum standards as set out in the Code for Sustainable Homes within new residential developments.</p> <p>Development proposals must demonstrate that they accord with Policy CS11 and that any adverse effects can be overcome by appropriate alleviation and mitigation, which are capable of being secured through planning conditions or an obligation in accordance with Policy CS18.</p> <p>To facilitate waste minimisation and recycling, the Council will support the development of on-site recycling facilities and new sources of renewable energy generation where there is no adverse environmental impact on nearby communities.</p>	
CS14 - Efficient use of natural resources	<p>Development proposals should ensure that efficient use is made of natural resources through their layout, design, construction and measures for waste disposal, by incorporating conservation measures and by making the best use of renewable resources. Developments larger than 1,000 sq m or 10 new homes will be required to include measures to off-set 10% of total predicted carbon emissions through a combination of sustainable design and construction and on-site renewable energy generation.</p> <p>To facilitate these requirements, the Council will support the development of on-site recycling facilities and new sources of renewable energy generation where there is no adverse environmental impact on nearby communities.</p>	Policy deleted.

Policy	Description	Revised Policies April 2007
CS15 - Access to services	The Council will work with local service providers to facilitate their stated land use and buildings requirements through the identification of mixed-use development opportunities in the Site Allocations DPD. The Council will also require new development to contribute to the Community Strategy aim of ensuring fair access to services and the wider goal of creating a safer and more sustainable environment. New proposals will be assessed against their impact on existing local infrastructure, services and resources and where necessary, new provision should be made as part of the development in order to meet or fund any shortfall.	Policy CS16 - Access to services No significant changes. Taken on board SA recommendations.
CS16 - Key community facilities	Proposals for the provision or dual use of key community facilities will be supported, subject to any environmental constraints and other relevant policies. Their loss, reduction or displacement will not be permitted unless it can be demonstrated that they are genuinely surplus and that any replacement accommodation is satisfactory for all of its users. The conversion or redevelopment of residential properties for healthcare and elderly care will not be considered appropriate unless it can be demonstrated that there are no other suitable sites or buildings within the service provider catchment.	Policy CS17 - Key Community Facilities No significant changes. Taken on board SA recommendations.
CS17 - Securing mixed use development	Mixed-development will be sought on major development sites in Borehamwood and Potters Bar town centres and in any other locations capable of satisfactorily accommodating a range of uses. The ability of any site to accommodate a mix of uses will be assessed on: i) the need for additional services and facilities in an area; ii) the potential to create linkages with other nearby land uses; iii) public transport accessibility and local road capacity; and iv) the impact on the environment within and around the development site. The Council will work in partnership with local service providers, Parish and Town Councils and local community groups, in order to identify the need for additional services and facilities.	Policy CS18 - Securing mixed use development No significant changes. Taken on board SA recommendations.

Policy	Description	Revised Policies April 2007
CS18 - Planning tariff and obligations	<p>Provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, will be secured through a fixed tariff on the approval of each new home. The tariff will be set at a suitable level to ensure that the development of new housing does not adversely affect existing facilities and services, having regard to the viability of developing land in the Borough.</p> <p>The provision of affordable housing together with on and off-site facilities, training, services and improvements necessitated by new commercial development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>Specific details on arrangements for securing a planning tariff and planning obligation will be set out in the Planning Tariffs and Obligations Supplementary Planning Document.</p>	<p>Policy CS19 - Planning tariff and obligations</p> <p>Provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, will be secured through:</p> <ul style="list-style-type: none"> i) a fixed tariff on the approval of each new home, on sites of fewer than 15 units (gross); and ii) the use of obligations entered into by the Council under Section 106 of the Town and Country Planning Act, on sites of 15 or more units (gross). <p>The tariff will be set at a suitable level to ensure that the development of new housing does not adversely affect existing facilities and services, having regard to the viability of developing land in the Borough.</p> <p>The provision of affordable housing, together with on and off-site facilities, training, services and improvements necessitated by new commercial development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>Specific details on arrangements for securing a planning tariff and planning obligation will be set out in the Planning Tariffs and Obligations Supplementary Planning Document.</p>
CS19 - Accessible buildings	<p>All new development should be designed to ensure that buildings and land within their curtilage are fully accessible to groups with special mobility requirements. 100% of new residential units should be built to the Lifetime Homes Standards highlighted in the Council's Planning and Design Guide Supplementary Planning Document. The proportion of wheelchair accessible homes on new residential redevelopments of 15 or more units will be considered on a site by site basis, having regard to current needs in the Borough.</p>	<p>Policy CS20 - Physically accessible buildings</p> <p>No significant change. Taken on board SAR recommendations.</p>
Transport		
CS20 - Development and accessibility	<p>To obtain the best use of the existing highway network, major trip generating development should be focused in areas of increased public transport accessibility, as indicated on the Key Map. Major commercial developments will only be permitted where:</p>	<p>Policy CS21 - Development and accessibility to services and employment</p> <p>No significant changes. Taken on board SA recommendations.</p>

Policy	Description	Revised Policies April 2007
	<ul style="list-style-type: none"> i) it does not conflict with the Transport Objectives of the Hertfordshire Local Transport Plan (2006 – 2011) and associated Accessibility Strategy; ii) it is accompanied by a suitable Travel Plan, prepared in accordance with guidance set out in the Parking Supplementary Planning Document; iii) it is in accordance with Hertfordshire County Council guidance and relevant Local Plan / Development Plan Document policies relating to the operation of the Highways network and the achievement of vehicular and pedestrian safety; and iv) it contributes, where appropriate, to the provision or funding of new or improved public transport, pedestrian and cycle routes. 	
CS21 - Accessibility and parking	<p>In order to facilitate fair access to local services, the quantity of off-street parking for all modes of transport, to be provided at new developments, will be based on an assessment of:</p> <ul style="list-style-type: none"> i) a site's location; ii) local car ownership; iii) the proposed land use (having regard to Table 14 for residential development); iv) the Accessibility Zones for the Borough; and v) the provisions of any Travel Plan submitted <p>together with the detailed criteria set out in the Parking Supplementary Planning Document.</p>	<p>Policy CS22 - Accessibility and parking</p> <p>No significant changes. Taken on board SAR recommendations.</p>

Policy	Description	Revised Policies April 2007
CS22 - Promoting alternatives to the car	<p>The Council will support a wide range of measures to provide safe and reliable alternatives to the car for accessing new development and other destinations across the Borough including:</p> <ul style="list-style-type: none"> i) improved public transport facilities; ii) additional public transport routes and stops; iii) enhanced and new non-motorised links within and between urban and rural areas, along or additional to the existing Rights of Way and highways network, which increase walking, cycling or riding opportunities; and iv) the safeguarding of proposed non-motorised routes, where necessary, to prevent development occurring which would prevent their implementation. <p>New developments will be assessed in terms of their accessibility by a range of transport modes and where appropriate, measures to promote alternatives to the car will need to be provided as part of a proposed scheme.</p>	<p>CS23 - Promoting alternatives to the car</p> <p>No significant changes. Taken on board SAR recommendations.</p>
CS23 - Town Centre Strategy	<p>Development within the designated town, district or neighbourhood centres of Borehamwood, Potters Bar, Bushey and Radlett will be permitted provided that it maintains their primary retail function and wider role as a focus for business, leisure, cultural and other appropriate town centre uses. Proposals to create in excess of 2,500 sq m of new retail floorspace should be focused on Borehamwood and Darkes Lane, Potters Bar town centres and will only be permitted where a clear quantitative need has been established and where it can be demonstrated that it would not harm any existing shopping centre.</p>	<p>CS24 - Town Centre Strategy</p> <p>No significant changes.</p>
CS24 - Strengthening Town Centres	<p>The retail function and vitality of designated centres will be reinforced through the designation of primary and secondary shopping frontages in Borehamwood, Potters Bar, Bushey and Radlett. There will be a focus on (A1) retail uses within the primary frontages and scope for a wider range of activities in secondary frontages, with an emphasis on a mix of (A1) retail, (A2) financial and professional services and (A3) dining-in establishments. An appropriate proportion of other uses will also be permitted in secondary frontages, including (A4) pubs and bars and (A5) take away uses, together with other appropriate town centre uses open to visiting member of the public. Details of frontages and uses will be set out in the Site Allocations DPD.</p>	<p>CS25- Strengthening town centres</p> <p>No significant changes.</p>
CS25 - Retail and commercial development in Shenley	<p>Small scale retail and commercial development in Shenley should be restricted to suitable sites within the following, existing commercial areas and as defined in the Shenley Parish Plan:</p>	<p>CS26 - Retail and commercial development in Shenley</p> <p>No significant changes.</p>

Policy	Description	Revised Policies April 2007
	<ul style="list-style-type: none"> Along London Road in the south east of the village; and At Andrew Close and the nearby junction between London Road and Porters Park Drive (excluding the reserve school site). <p>Such development should be appropriate in size and scale to the size of the settlement and of a scale which primarily serves the local community rather than drawing in large numbers of visitors.</p>	
CS26 - Safe and attractive evening economy	<p>The Council wishes to promote a range of uses in town centres which result in a balanced evening economy including entertainment and late night retailing as well as eating and drinking establishments. The quantity, type and location of A3, A4, A5 and other evening or late night uses will be controlled, having regard to other Local Plan and Development Plan Document policies, together with the aims and objectives of the Crime, Disorder and Drugs Reduction Strategy for Hertsmere. In relation to those areas where concentrations of drinking establishments, night clubs or other evening or late night uses have caused existing anti-social problems, there will be a presumption against further consents for such uses.</p>	<p>CS27 - Safe and attractive evening economy</p> <p>No significant changes.</p>

F.2 Preferred Options October 2007

- F.2.1 Since the April 2007 version of the Core Strategy, following additional Councillor input between May and September 2007, further changes were made to the Core Strategy Preferred Options. These changes focused on Chapters 2 (Spatial Vision and Development Strategy) and 3 (Housing) and mainly involved changes to the supporting text. A limited number of policies were subject to some amendment and the assessment below takes account of those changes.
- F.2.2 This section outlines the key findings, from a sustainability perspective, on the revised policy wordings and the extent to which the revised policy wordings affect the sustainability appraisal to date and the overall sustainability performance of the plan.
- F.2.3 The following policies were amended and formed the focus for re-assessing the Preferred Options against the SA framework:
- Policy CS1: The Location and Supply of New Homes – this policy was amended to remove reference to the actual RSS14 number (5,000 homes). The supporting text to this policy was also been changed and less detail is provided.
 - Policy CS2: Housing beyond built up areas – this policy was amended to remove reference to the location of potential greenbelt releases and directs the reader to the key diagram. In addition the number of new homes needed to be accommodated within greenbelt was reduced (from 550 to 460). An additional criterion (ix) was added as follows: *‘the extent of previously developed land on the site’*. The supporting text to this policy was also changed and less detail is provided.
 - Policy CS3: Phasing of Development – the permitted levels of housing to 2011, 2016 and 2021 were shown as a % of new homes rather than actual number of units. In addition, reference in the supporting text to the number of homes to be found on Greenfield sites in phase 2 and phase 3 were deleted and then referred the reader to the Site Allocations DPD which will identify sufficient Greenfield sites. The supporting text to this policy was also changed and less detail was provided.
 - Policy CS4: Affordable Housing – this policy was amended to remove reference to the location of affordable housing (previously identified as Borehamwood, Bushey, Potters Bar, Radlett and other accessible locations). In addition the overall housing target was increased from 840 to 940 homes (out of the overall housing target for Hertsmere) as the Council predicted that more qualifying sites will come through, based on the previous year’s housing data.
 - Policy CS6: Gypsy and Travellers – additional criteria were added to this policy and the supporting text was amended to reflect the additional criteria:
 - (i) *the potential of existing sites to accommodate additional pitches,*
 - (v) *avoiding over dominating.....ensuring that there is not an undue level of Gypsy and Traveller pitches in any one part of the Borough which might result in an adverse impact on the local environment and/or infrastructure’*
 - (viii) *an ability for the site to be effectively managed for Gypsies and Travellers with local connections’*
 - (xii) *the likely availability of the site to accommodate Gypsy and Traveller pitches.*
 - Policy CS12: Protection and Enhancement of the Natural Environment – an additional sentence was added: *‘a strategic gap in the Green Belt between Bushey and Watford will be maintained within which any limited development, deemed acceptable in the Green Belt, should serve to retain the separation between the two towns’.*

- Policy CS19: Standard charge and other planning obligations – criteria (i) and (ii) were changed from referring to a fixed tariff and general obligation respectively to:
 - (i) a standard charge on the approval of each new home, on sites fewer than 15 units (gross), to be secured through a planning obligation under Section 106 of the Town and Country Planning Act; and
 - (ii) the use of individually negotiated planning obligations....
- Policy CS22: Accessibility and Parking – additional criterion were added to this policy so that the quantity of off-street parking to be provided at new development will be based on additional criteria including:
 - (iv) housing tenure
 - (v) the potential for shared parking, over various times of the day and week, with other uses
 - (vii) highway and pedestrian safety considerations
 - (viii) incentives to reduce dependency on the car and the provisions of any Travel Plan submitted.

F.2.4 Each of the revised policies, in terms of their effect on the sustainability appraisal results to date and the overall sustainability of the Plan, were addressed below:

CS1: The Location and Supply of New Homes

F.2.5 Although the actual housing target of 5,000 imposed in the draft RSS14 has been removed from the revised policy wording, the supporting text still makes it clear that Hertsmere are likely to have to plan for 5,000 over the plan period, this change had no effect on the appraisal of this policy or the overall sustainability of the plan.

CS2: Housing beyond Existing Built-Up

F.2.6 Reference to the location of potential green belt releases was removed in the revised policy wording. Instead the policy directs the reader to the Key Diagram on Page 32. In the key diagram, the general location of the green belt releases was shown (i.e. around Potters Bar and to the north and south of Borehamwood). The appraisal of this policy in April 2007 against the SA framework concluded the original policy performed badly against most of the environmental objectives namely SA07 (flooding), SA08 (soil quality), SA09 (landscape and historic character), SA10 (landscape), SA12 (biodiversity), SA13 (water quality), SA16 (air quality), SA17 (greenhouse gases emissions) and SA19 (waste). This appraisal remained valid, despite the removal of specific locations for greenbelt releases.

F.2.7 The changes to the wording of this policy did not change the overall assessment. However, a precautionary approach would have been taken in the assessment of this policy against environmental objectives without specific reference to the locations of greenbelt release and as such; more significant negative effects may have been identified.

F.2.8 It was recommended that the policy should include a phasing clause in the policy wording to ensure that green belt sites are only released for development once all brownfield sites have been developed. This has not been included in the Core Strategy Preferred Options. However, PPS3 would prevent Hertsmere from formally relying on all brownfield windfall opportunities ahead of Green Belt releases. Hertsmere have sought to set back Green Belt releases to the final phase of the Plan period with the possibility of avoiding developing the Green Belt at that stage if sufficient brownfield sites have come forward by then.

CS3: Phasing of Development

F.2.9 The changes to this policy did not affect the appraisal of this policy or the overall sustainability of the plan.

CS4: Affordable Housing

- F.2.10 The percentage of affordable housing remained the same but the target for affordable housing was increased from 840 homes to 940 (out of an overall government housing target of 5,000 homes). This is because Hertsmere was predicting more qualifying sites coming forward based on the housing supply data undertaken in 2006. The sustainability appraisal of the April 2007 policy version concluded that there would be significant negative effects with this policy relating to affordable housing provision and helping to tackle poverty and social exclusion (SA04) and providing sufficient housing that is affordable (SA03). With the increase in affordable housing target by 200 homes, this improved effects, deemed minor positive, that this policy had on SA03 and SA04.

CS6: Gypsy and Travellers

- F.2.11 This updated policy specified the number of additional pitches the Council will seek to provide; up to 11 additional pitches through the identification of land in the Allocations DPD. There were 3 additional criteria in this revised policy. However, the additional criterion does not significantly alter the sustainability appraisal. The additional text in criteria (v) strengthened the protection of the local environment from potential adverse effects of this policy resulting in overall positive effects.

CS12: Protection and Enhancement of the Environment

- F.2.12 An additional sentence was added to this policy referring to the protection of the strategic gap between Bushey and Watford. This policy, with the recommendations in Chapter 5 being incorporated into this policy, was assessed as having positive effects on the environmental SA objectives. Reference to the protection of the strategic gap between Bushey and Watford strengthened the positive effects on the environmental objectives, particularly against SA09 (to protect and enhance landscape character) and SA10 (to maintain and enhance the quality of the countryside).

CS19: Standard Charge and Other Planning Obligations

- F.2.13 The change in terminology from a fixed tariff to a standard charge in criterion (i) did not significantly alter the sustainability appraisal.

CS22: Accessibility and Parking

- F.2.14 This policy was amended to include an additional six criteria against which the quantity of off-street parking in new developments will be assessed against. The potential for shared parking, local on-street parking conditions and controls and incentives to reduce dependency on the car, accentuated the positive effects against SA11 (to reduce dependence on private care and achieve modal shift to more sustainable modes of transport). However, the policy in the revised CS April 2007, was assessed as having moderate positive effects against SA10 and the assessment scoring for the October 2007 policy wording remained the same.

F.3 Core Strategy for Submission to the Secretary of State, July – October 2008

- F.3.1 Following the preferred options consultation on the draft Core Strategy and prior to submission to the Secretary of State, the draft Core Strategy prepared in October 2007 was subject to further revision taking into account comments from the preferred options consultation and as such, a further iteration in terms of sustainability appraisal has taken place. This section provides a summary of the key changes in the wording of the Core Strategy policies that are relevant to the sustainability appraisal and the sustainability performance of the Core Strategy. The set of Core Strategy Policies which was submitted to the Secretary of State in 2008 is provided in Table 6.3.

Spatial Policies

- F.3.2 There was minor rewording to the overall Core Strategy spatial objectives and the spatial objectives for each settlement however, these changes were not significant.
- F.3.3 A notable change to the final draft Core Strategy was to the 'strategic spatial policies' following advice from the Government Office for the East of England. Spatial Policies SP2 – SP6 were deleted and their provisions were combined with other policies where necessary. In addition, Spatial Policy 1: Creating Sustainable Development was strengthened to reflect the provisions of SP2 – SP6. SP1 now reads (new wording is underlined):

Policy SP1 Creating sustainable development

The Council will work with Hertfordshire County Council, Hertfordshire Constabulary, West Hertfordshire Primary Care Trust, Registered Social Landlords and other key local stakeholders to enable development in the Borough to make a sustainable contribution to delivering the Core Strategy Spatial Vision and Strategy. Accordingly new development will be required to prioritise the efficient use of brownfield land in delivering the land use requirements of the private sector, local service providers and the different needs of the hierarchy of settlements across the Borough. There will be a focus on prioritising development in Borehamwood and Potters Bar and within the boundary of existing built up areas but all urban settlements will be expected to accommodate opportunities which arise for meeting local housing, jobs growth and other development and service needs. All development across the Borough should:

- (i) ensure a safe, accessible and healthy living environment for residents and other users of a development;*
- (ii) seek to mitigate the environmental impact of transport by promoting alternatives to the car and opportunities for linked trips;*
- (iii) be constructed and operated using a minimum amount of non-renewable resources and be required to use energy efficiency;*
- (iv) be of high quality design and appropriate in scale, appearance and function to the local context and settlement hierarchy, taking advantage of opportunities to improve the character and quality of an area;*
- (v) avoid prejudicing, either individually or cumulatively, characteristics and features of the natural and built environment;*
- (vi) minimise and mitigate the impact on local infrastructure and services; and*
- (vii) Comply with the key environmental policies set out in the Core Strategy.*

- F.3.4 It was considered that this spatial policy provided an overarching statement, encompassing all aspects of sustainability. The Policy included reference to developments promoting safe and accessible environment as well as being of high quality design reflecting the objectives of previous

spatial policies: SP3, SP4 and SP6. Overall, it was considered that SP1 from the outset, set a strong theme for sustainable development throughout the plan.

- F.3.5 The following two policies CS2: Local and Supply of New Housing and CS3: Affordable Housing were revised significantly.

CS1: Location and Supply of New Housing

Policy CS1 reads:

The Council will make provision for the supply of at least 5,000 new homes between 2001 and 2021 in accordance with in the requirements of the East of England Plan (RSS14) with a focus on development within the three Strategic Housing Locations of Borehamwood, Potters Bar and Bushey. In providing for the new homes and identifying new locations for development in the Site Allocations DPD, the Council will take account of:

- (i) *environmental constraints and compliance with the key environmental policies set out in the Core Strategy (including Policies CS11, CS12, CS14 and CS15);*
- (ii) *the density of the surrounding area;*
- (iii) *the need to retain existing housing;*
- (iv) *the need to locate new development in the most accessible locations taking account of local infrastructure capacity;*
- (v) *the settlement hierarchy identified in the Hertsmere Core Strategy; and*
- (vi) *the need to focus development within the boundaries of existing built-up areas.*

Unless there are exceptional circumstances, no more than 50% of new housing will be sought in Borehamwood, up to 30% in Potters Bar, up to 30% in Bushey and up to 15% in Radlett and other suitable locations. Development proposals should ensure that any adverse effects on the built and natural environment are avoided and / or mitigated. Windfall developments will be supported on appropriate sites in all towns, subject to the environmental constraints and requirements of Policies SP1, CS12, CS14, CS15 and other relevant planning policies.

- F.3.6 Policy CS1 was subject to revision to take account of the requirements in the East of England Plan (RSS14) as adopted in May 2008. The RSS confirmed the supply of at least 5,000 new homes. This level of housing was reflected in the sustainability appraisal of the April and October 2007 versions of the Core Strategy and therefore remains valid. The revised Policy CS2 identifies three strategic housing locations in Borehamwood, Potters Bar and Bushey where as previous policy wording has not provided a spatial distribution for future housing. It was considered by providing this spatial distribution for future housing it will ensure that the focus for development will be in the major towns in Hertsmere.
- F.3.7 Negative effects of varying scale and significance were previously identified against SA Objectives 8 (contamination), 9 (heritage assets), 13 (water quality), 14 (water consumption), 15 (flooding), 16 (air quality) and 17 (greenhouse gas emissions). In addition, long term negative effects were previously identified against SA10 (countryside) and SA12 (biodiversity) as the Core Strategy identifies a possible need for Greenfield development to meet the higher target of 5,000. These negative effects on the environment are mitigated to a certain degree by cross referencing with the environmental policies notably CS11, CS13 and CS14.

Policy CS3: Phasing of New Development

- F.3.8 Policy CS3 was slightly amended. The cap on development site sizes, where Hertsmere is projected to exceed RSS targets, was raised from 25 units to 50 units. This was considered necessary as a lower threshold could prejudice the amount of affordable housing which could emerge on windfall sites. This minor change was not considered to have significant changes to

the SA and was considered to accentuate the positive effects that this policy had on SA03 and SA04 as more affordable housing will be required for larger windfall sites.

Policy CS4: Affordable Housing

- F.3.9 Policy CS4 on Affordable Housing was revised and a target of 35% affordable housing on qualifying sites was sought through this policy. This compares with the April and October 2007 versions which sought 25% affordable housing. The actual number of affordable housing units planned increased from 940 homes to 1,315 homes (out of an overall government housing target of 5,000 homes). The sustainability appraisal of the October 2007 policy version concluded that there would be minor positive effects with this policy relating to affordable housing provision and helping to tackle poverty and social exclusion (SA04), providing affordable housing in accessible locations and providing sufficient housing that is affordable (SA03). With the increase in affordable housing target by 375 homes, this accentuated the positive effects that this policy had on SA03 and SA04.

Other Changes

- F.3.10 Policy CS10: Land use within employment areas was slightly reworded and included the following additional sentence:
- The provision of training opportunities for the local workforce will be encouraged and sought as part of new employment development across the Borough.*
- F.3.11 It was considered that the positive effects already identified against SA Objective 20; to provide a prosperous, balanced and stable economy, were accentuated as the policy actively seeks training opportunities through the implementation of this policy.
- F.3.12 Policy CS20: Physically Accessible Buildings incorporated the provisions of Spatial Policy 6: High Quality Design. Policy CS20 was updated to read:
- Policy CS20: Securing a high quality and accessible environment
- The Council will require all development to be of high quality design which ensures the creation of attractive and usable places. Development proposals should take advantage of opportunities to improve the character and quality of an area and the Council will take account of the cumulative impact of new development, including the impact arising from residential intensification and redevelopment. All new development should be designed to ensure that buildings and land within their curtilage are fully accessible to groups with special mobility requirements. Where practicably possible 100% of new residential units should be built to the Lifetime Homes Standards based on the Joseph Rowntree Foundation standards highlighted in the Council's Planning and Design Guide Supplementary Planning Document. The proportion of wheelchair accessible homes on new residential redevelopments of 15 or more units will be considered on a site by site basis, having regard to current needs in the Borough.
- F.3.13 It was considered that this policy would ensure high quality design in new development and thus confirming the significant positive effects previously identified against SA Objective 3: to meet identified housing needs and improve the quality and affordability of housing. In addition, the emphasis in this policy to ensure that development proposals take advantage of opportunities to improve the character and quality of an area is likely to result in positive effects on objective SA09 to protect and enhance the landscape character, historic buildings, archaeological sites and cultural features. The previous sustainability appraisal of CS20 identified no effects. These positive effects are likely to be dependent on the design of developments coming forward and can be subjective. As such, the positive effects are not considered significant.
- F.3.14 Policy CS27: Safe and Attractive Evening Economy has been slightly reworded and now includes an additional sentence as follows:
- '....including the need to reduce anti-social behaviour, crime and the fear of crime'.*

- F.3.15 It was considered that the addition of this sentence resulted in significant positive effects on SA objective 5: to reduce and prevent crime, fear of crime and anti social behaviour. However, like the previous appraisal of this Core Strategy Policy, the likelihood of these positive effects is uncertain as policy will not change social behaviour and the duration of the positive effects is unknown.
- F.3.16 There was minor rewording of the remainder of the Core Strategy policies however, the changes are considered insignificant and did not affect alter the sustainability appraisal results from the October 2007 version.

Table F.3 - Set of Core Strategy Policies (2008)

Policy	
Policy SP1 - Creating Sustainable Development	<p>The Council will work with Hertfordshire County Council, Hertfordshire Constabulary, West Hertfordshire Primary Care Trust, Registered Social Landlords and other key local stakeholders to enable development in the Borough to make a sustainable contribution to delivering the Core Strategy Spatial Vision and Strategy. Accordingly new development will be required to prioritise the efficient use of brownfield land in delivering the land use requirements of the private sector, local service providers and the different needs of the hierarchy of settlements across the Borough. There will be a focus on prioritising development in Borehamwood and Potters Bar and within the boundary of existing built up areas but all urban settlements will be expected to accommodate opportunities which arise for meeting local housing, jobs growth and other development and service needs. All development across the Borough should:</p> <ul style="list-style-type: none"> i) ensure a safe, accessible and healthy living environment for residents and other users of a development; ii) seek to mitigate the environmental impact of transport by promoting alternatives to the car and opportunities for linked trips; iii) be constructed and operated using a minimum amount of non-renewable resources and be required to use energy efficiently; iv) be of high quality design and appropriate in scale, appearance and function to the local context and settlement hierarchy, taking advantage of opportunities to improve the character and quality of an area v) avoid prejudicing, either individually or cumulatively, characteristics and features of the natural and built environment; vi) minimise and mitigate the impact on local infrastructure and services; and vii) comply with the key environmental policies set out in the Core Strategy;
CS1 -The location and supply of new homes	<p>The Council will make provision for the supply of at least 5,000 new homes between 2001 and 2021 in accordance with the requirements of the East of England Plan (RSS14) with a focus on development within the three Strategic Housing Locations of Borehamwood, Potters Bar and Bushey. In providing for the new homes and identifying new locations for development in the Site Allocations DPD, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints and compliance with the key environmental policies set out in the Core Strategy (including Policies CS11, CS12, CS14 and CS15); ii) the density of the surrounding area; iii) the need to retain existing housing; iv) the need to locate new development in the most accessible locations taking account of local infrastructure capacity; v) the settlement hierarchy identified in the Hertsmere Core Strategy; and vi) the need to focus development within the boundaries of existing built-up areas. <p>Unless there are exceptional circumstances, no more than 50% of new housing will be sought in Borehamwood, up to 30% in Potters Bar, up to 30% in Bushey and up to 15% in Radlett and other suitable locations. Development proposals should ensure that any adverse effects on the built and natural environment are avoided and / or mitigated. Windfall developments will be supported on appropriate sites in all towns, subject to the environmental constraints and requirements of Policies SP1, CS12, 14, 15 and other relevant planning policies.</p>
CS2 - Housing beyond existing built	<p>Changes to the boundaries to the existing built up areas to accommodate up to 460 new homes will be focused on sites to be identified through the Site Allocations DPD, broad locations for which are shown on the Key Diagram to the south and east of Borehamwood and to the south,</p>

Policy	
up areas	<p>west and north-west of Potters Bar. The identification of individual sites will be based on a range of criteria including (but not restricted to):</p> <ul style="list-style-type: none"> i) Air quality; ii) Noise; iii) Transport impact; iv) Flood risk; v) Nature conservation value and impact; vi) Landscape conservation value and impact vii) Agricultural land quality; and viii) Accessibility to and capacity of public transport and essential services ix) The extent of previously developed land on the site
CS3 – Phasing of New Development	<p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policies CS1 and CS2, the Council will permit phased levels of new housing development, measured from the start of the plan period in 2001:</p> <ul style="list-style-type: none"> • Phase 1: Up to 57% of new homes by March 2011 • Phase 2: Up to 74% of new homes by March 2016 • Phase 3: Up to 100% of new homes by March 2021 <p>Housing sites will be phased for periods up to March 2011, March 2016 and March 2021 through the Site Allocations DPD, to facilitate the required levels of housebuilding sought in the East of England Plan. Based on the findings of Annual Monitoring Reports, allocated land in later phases will be brought forward, if necessary, to maintain the five year supply of land for housing. New housing between 2021 and 2024 will be permitted on unallocated sites at the same rate as housing delivered between 2001 and 2021.</p> <p>Sufficient Greenfield sites should be identified in the Site Allocations DPD to enable the provision of land for new homes in Phase 3, if required.</p> <p>To prevent the overdevelopment of housing in the Borough ahead of required infrastructure and community facilities, unimplemented residential land allocations and new residential proposals of 50 units (net) or more will not be permitted where the number of projected completions, as detailed in Annual Monitoring Report housing trajectory, is forecast to exceed either</p> <ul style="list-style-type: none"> • 20% of the proportion sought in each phase over the following three years; or • the East of England Plan target of 5,000 before 2021 <p>Where housing delivery is projected to fall below the proportion sought in each phase by at least 20% over the following three years, a review of the phasing of housing allocations will be undertaken.</p>
CS4 - Affordable Housing	<p>In order to optimise increase the supply of Affordable Housing, developments involving more than 15 residential units (gross), or residential sites of more than 0.5 hectares, should make provision for an element of Affordable Housing.</p> <p>The Council will seek the provision of 35% Affordable Housing on qualifying sites, pending the finalisation of Affordable Housing requirements in the East of England Plan, equating to an overall Affordable Housing target of 1,315 homes (out of an overall government housing target of 5,000 homes).</p> <p>On sites requiring the provision of Affordable Housing and subject to other relevant DPD / Local Plan policies, the Council will seek to maximise the provision of affordable, rented accommodation managed delivered through a Registered Social Landlord unless otherwise agreed with the Council's Housing Department. The Affordable Housing tenure mix will be considered on a site-by-site basis with recognising that approximately 75% of all new Affordable Housing in the Borough should be delivered as social rented housing and the remainder as intermediate housing.</p>
CS5 - Affordable Housing in rural exception sites	<p>The inclusion of small scale Affordable Housing schemes, as an exception to normal policies, will be permitted in designated "smaller" settlements in the Green Belt, as set out on the Core Strategy Key Diagram. , may be permitted to include the development of small scale Affordable Housing schemes as an exception to normal policies. "Exception" sites should be small in scale in relation to the size of settlements and such schemes should meet the identified needs of</p>

Policy	
	people local to the village or settlement, remain affordable in perpetuity and be managed by a Registered Social Landlord. Priority will be given to sites located on previously developed land within settlements and the scale of development should not exceed the level of need identified or have adverse effects on the natural and built environment.
CS6 - Gypsies and Travellers	<p>The Council will seek to provide for the further needs of Gypsies and Travellers (as defined in Circular 01/06). On the basis of identified need within south and west Hertfordshire, the Council will seek to provide for up to 12 additional pitches up to 2011 through the identification of land in the Site Allocations DPD. In identifying any required potential sites, as well as accommodating identified needs after 2011, consideration will be based on a range of criteria including:</p> <ul style="list-style-type: none"> i) the potential of existing sites to accommodate additional pitches; ii) a sequential site selection process with an emphasis on land which has been previously developed; iii) safe and convenient access to the primary road network with proximity to the major road network and without blocking or inhibiting use of any existing rights of way; iv) avoiding prejudicing adjacent nearby residential or rural amenity as a result of visual intrusion, excessive noise, lighting, traffic generation or activity at unsocial hours; v) avoiding overdominating and respecting the size and scale of the nearest settled community, ensuring that there is not an undue level of Gypsy and Traveller pitches in any one part of the Borough which might result in an adverse impact on the local environment and / or infrastructure; vi) safe and acceptable environmental conditions within the site including the need to avoid air and noise pollution and significantly contaminated land; vii) an ability to receive essential services including water, sewerage, drainage and water disposal; viii) an ability for the site to be effectively managed for Gypsies and Travellers with local connections; ix) a location within reasonable proximity to key local services; x) the potential for a site to be effectively landscaped and where necessary, an adequate buffer between the site and any nearby housing; xi) the potential risk of flooding or the ability to mitigate this risk; and ensuring any other adverse effects on the built and natural environment are avoided and / or mitigated including compliance with the key environmental policies set out in the Core Strategy (including Policies CS11, CS12, CS14 and CS15); and xii) the likely availability of the site to accommodate Gypsy and Traveller pitches.
CS7 - Housing Mix	<p>To help meet local housing needs, proposals for new housing should provide an appropriate mix of new homes in terms of housing size and type within each tenure. Development proposals will be permitted, subject to the requirements of other relevant DPD / Local Plan policies, so long as:</p> <ul style="list-style-type: none"> i) housing developments in excess of 10 units (gross) contain some variation within their housing mix, with sites over 25 units or 1 hectare reflecting identified variations within the Borough's housing need, subject to proposals respecting the prevailing character of the area; and ii) on large sites allocated in the Site Allocations DPD, development sites of 100 or more units (gross), a proportion of sheltered or very sheltered housing is provided will be sought as part of the overall housing mix.
CS8 - Scale and distribution of employment land	<p>The Council will support development proposals in appropriate locations which attract commercial investment, maintain economic competitiveness and provide employment opportunities for the local community. In order to encourage economic development and promote a competitive local economy, provision will be made sought for the supply of at least 100 ha of strategically designated employment land for B-class development within the Borough up to 2021, focused on the following locations and as indicated identified on the Key Diagram:</p> <p><u>Employment Areas</u></p> <ul style="list-style-type: none"> • Elstree Way, Borehamwood • Stirling Way, Borehamwood • Cranbourne Road, Potters Bar

Policy	
	<ul style="list-style-type: none"> • Station Close, Potters Bar • Otterspool Way, Bushey <p><u>Key Employment Site</u></p> <ul style="list-style-type: none"> • Centennial Park, Elstree <p>The boundaries of these locations will be clarified in the Site Allocations DPD including the limited release of any vacant or surplus previously designated land within the Elstree Way Employment Area for new housing or housing-led or mixed-use development where appropriate. The precise boundary of any individual sites to be released will be based on an assessment of whether:</p> <ol style="list-style-type: none"> an acceptable environment can be provided for housing-led development, including its impact on local traffic levels; a housing-led development would prejudice the ability of nearby businesses to operate; the employment land release would prejudice the implementation of the Elstree Way Corridor Planning and Design Brief and other Council economic development and regeneration strategies; and whether any adverse effects on the built and natural environment can be avoided, mitigated and/or compensated <p>Any further releases of vacant or surplus strategically designated employment land will only be considered following an assessment of the suitability of a site for continuing employment use and as required, an employment land needs assessment. Exceptionally, compensatory allocations elsewhere will be sought, through the Site Allocations DPD.</p>
CS9 - Local significant employment sites	<p>In order to sustain a competitive local economy with good access to employment for the local population, the Council will seek to maintain a supply of smaller, business units across the Borough. In order to achieve this, the Council will work with key partners, including the South West Hertfordshire Business Partnership and local Chambers of Commerce, to identify Local Significant Employment Sites subject to the provisions of Policies CS22, CS23 and other relevant DPD / Local Plan environmental policies. These sites will be identified in the Site Allocations DPD and comprise economically viable business accommodation of 0.25 hectares or more with satisfactory access, parking and environmental conditions, for B-class and other identified, employment generating uses. Any redevelopment of a Locally Significant Employment Site for housing or other development will be based on an assessment of the criteria in Policy CS8.</p>
CS10 - Land use within employment areas	<p>Activities within designated Employment Areas will be limited to office, industrial, warehousing and other B-class uses. The provision of training opportunities for the local workforce will be encouraged and sought as part of new employment development across the Borough.</p> <p>Any new office development exceeding 2,500 sq m within Employment Areas will be limited to the Elstree Way, Borehamwood Employment Area, subject to meeting environmental and other relevant DPD / Local Plan Policies.</p> <p>Certain other uses will also be permitted within Employment Areas, comprising waste management, builders merchants, film / television studios and production, and car dealerships and trade counter operations where the extent of any (non-trade) retail or sales activity display remains ancillary to the principal use of the site. All development should meet the requirements of Policies CS12 and CS15 to ensure that potential contamination is minimised and remediated.</p>
CS11 - Promoting film and television production in Hertsmere	<p>To promote the retention and growth of the film and television production industry in the Borough, the Council will support proposals relating to film and television production and ancillary or associated uses in Borehamwood. Proposals to develop, refurbish and upgrade film and television studios will be supported subject to environmental constraints and other relevant policies.</p> <p>In order to facilitate the operational requirements of the film and television production industry, the Council will also seek to make a Local Development Order (LDO) on the principal studio sites. The LDO will grant permission for future, small-scale changes within these sites relating to their primary use as locations for film and television production.</p>
CS12 - Protection and enhancement of the natural environment	<p>All development proposals must conserve and enhance the natural environment of the Borough, including biodiversity, landscape character and sites of ecological and geological value, in order to maintain and improve environmental quality. Development proposals should provide opportunities for habitat creation and enhancement throughout the life of a development. There will be a presumption against inappropriate development and other development which causes harm to the openness and appearance of the Green Belt, as defined in PPG2 (Green Belts) and</p>

Policy	
	in the case of the highest quality agricultural land (Grades 1, 2 and 3a) and Preferred Areas of mineral extraction, proposals will only be permitted where there is no likelihood of the land being sterilised. A strategic gap in the Green Belt between Bushey and Watford, and Bushey and Stanmore will be maintained within which any limited development, deemed acceptable in the Green Belt, should serve to retain the separation between the two towns.
CS13 Protection and enhancement of historic assets	All development proposals must conserve and enhance the historic environment of the Borough in order to maintain and improve local environmental quality. Development proposals should be sensitively designed to a high quality and not cause harm to identified, protected sites or locations of historic or archaeological value including Conservation Areas, Listed Buildings, Historic Parks and Gardens, Scheduled Ancient Monuments and Archaeological Remains.
CS14 - Promoting recreation access to the countryside	<p>The Council will work with its partners and relevant agencies to safeguard, enhance and facilitate access to parks, open spaces and to the local countryside. Measures which secure the provision of safer and more secure car-free access including enhancements and additions to the rights of way / Greenways network as set out in the Council's Greenways Strategy, will be actively sought where they do not present a risk to the biodiversity value and intrinsic environmental quality of the locality. The provision or enhancement of visitor facilities in the countryside, including Watling Chase Community Forest Gateway Sites and Historic Parks and Gardens, will only be encouraged where this:</p> <ul style="list-style-type: none"> i) specifically enhances access for the local population ii) does not harm the character, appearance and openness of the Green Belt, landscape and wider countryside; iii) does not cause new road congestion; iv) does not exacerbate existing road congestion; and v) will ensure that biodiversity is protected and enhanced in accordance with Policy CS
CS15 - Environmental Impact of new development	<p>The Council will work with key partners, including the Environment Agency and Natural England, to ensure that development proposals do not create an unacceptable level of risk to occupiers of a site, the local community and the wider environment. Development proposals should take account of the guidance set out in the jointly produced guidance of the Hertfordshire Planning Authorities Hertfordshire County Council guide 'Building Futures' the Hertfordshire Guide to Promoting Sustainability in Development. Proposals will be required to incorporate sustainability principles, minimising their impact on the environment and ensuring prudent use of natural resources by measures including:</p> <ul style="list-style-type: none"> i) avoiding development in the floodplain and close to river corridors unless the requirements of the exceptions test have been met and flood prevention/mitigation measures are in place as required by the Environment Agency; ii) ensuring that developments larger than 1,000 sq m or 10 new homes include measures to offset at least 10% of total predicted carbon emissions*, subject to local environmental and amenity constraints, through a combination of sustainable design and construction and on-site renewable energy generation; iii) reducing water consumption through measures such as water saving devices and incorporating the use of Sustainable Urban Drainage Systems (SUDS); iv) ensuring that pollutants are minimised (including emissions to air, water, soil, light and noise); v) remediating land affected by instability and contamination, and maintaining appropriate distance from establishments containing hazardous substances; vi) ensuring efficient use is made of natural resources through their layout, design and construction, including locally sourced materials where possible; vii) achieving reduced levels of energy consumption and the use of energy from renewable resources; viii) making provision for waste minimisation and recycling within the development; and ix) seeking to exceed the minimum standards as set out in The Code for Sustainable Homes within new residential developments. x) Development proposals must demonstrate that they accord with Policy CS12 and that any adverse effects can be overcome by appropriate alleviation and mitigation, which are capable of being secured through planning conditions or an obligation in accordance with

Policy	
	<p>Policy CS19.</p> <p>xi) To facilitate waste minimisation and recycling, the Council will support the development of on-site recycling facilities and new sources of renewable energy generation where there is no adverse environmental impact on nearby communities</p>
CS16 - Access to services	<p>The Council will work with local service providers to facilitate and promote their stated land use and buildings requirements through the identification of mixed-use and other development opportunities in the Site Allocations DPD. The Council will also require new development to contribute to the Community Strategy aim of ensuring achieving fair access to services provided through key community facilities and the wider goal of creating a safer and more sustainable environment. New proposals will be assessed against their impact on existing local infrastructure, services and resources and where necessary, new provision of required key community facilities should be made as part of the development in consultation with the local community and local service providers and in order to meet or fund any infrastructure impact, having regard to the provisions of Policy CS19.</p>
CS17 - Key Community Facilities	<p>Proposals for the provision or dual use of key community facilities, including educational, healthcare and recreational facilities, will be supported, subject to any environmental constraints and other relevant policies. The loss, reduction or displacement of facilities and sites will not be permitted unless it can be demonstrated that they are genuinely surplus to the needs of the local community, there is no scope for alternative community uses to be provided and that any replacement accommodation elsewhere is satisfactory for all of its users, having regard to the provisions of Policy CS19. The conversion or redevelopment of residential properties for healthcare and elderly care will not be considered appropriate unless it can be demonstrated that there are no other suitable sites or buildings within the service provider catchment.</p>
CS18 - Securing mixed use development	<p>Mixed-development will be sought on major development sites in Borehamwood and Potters Bar town centres and in any other locations capable of satisfactorily accommodating a range of uses. The ability of any site to accommodate a mix of uses will be assessed on:</p> <ul style="list-style-type: none"> i) the need for additional services and facilities in an area; ii) the potential to create linkages with other nearby land uses; iii) public transport accessibility and local road capacity; and iv) the impact on the environment within and around the development site. <p>The Council will work in partnership with local service providers, Parish and Town Councils and local community groups, in order to identify the need for additional services and facilities.</p>
CS19 - Planning tariff and obligations	<p>Provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, in addition to contributions towards off-site Affordable Housing, will be secured through:</p> <ul style="list-style-type: none"> (i) the use of individually negotiated planning obligations and subsequently any standard charge on the approval of each new home, on sites of fewer than 15 units (gross), to be secured through a planning obligation under Section 106 of the Town and Country Planning Act; and (ii) the use of individually negotiated planning obligations entered into by the Council under Section 106 of the Town and Country Planning Act, on sites of 15 or more units (gross). <p>The standard charge will be set at a suitable level to ensure that the development of new housing does not adversely affect existing key community facilities and services, having regard to the viability of developing land in the Borough.</p> <p>The provision of Affordable Housing, together with on and off-site facilities, training, services and improvements necessitated by new commercial development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>Specific details on arrangements for securing developer contributions will be set out in the Planning Obligations Supplementary Planning Document.</p>
CS20 - Securing a high quality and accessible environment	<p>The Council will require all development to be of high quality design which ensures the creation of attractive and usable places. Development proposals should take advantage of opportunities to improve the character and quality of an area and the Council will take account of the cumulative impact of new development, including the impact arising from residential intensification and redevelopment. All new development should be designed to ensure that buildings and land within their curtilage are fully accessible to groups with special mobility</p>

Policy	
	<p>requirements. Where practicably possible 100% of new residential units should be built to the Lifetime Homes Standards based on the Joseph Rowntree Foundation standards highlighted in the Council's Planning and Design Guide Supplementary Planning Document. The proportion of wheelchair accessible homes on new residential redevelopments of 15 or more units will be considered on a site by site basis, having regard to current needs in the Borough.</p>
<p>CS21 - Development and accessibility</p>	<p>Policy CS21 Development and accessibility to services and employment</p> <p>The Council will work towards Hertfordshire County Council's vision of providing a safe, efficient and affordable transport system that allows access for all to everyday facilities. To obtain the best use of the existing highway network, major commercial trip generating development should be focused principally on Transport Development Areas, Transport Corridors and town centres, as indicated on the Key Map. All major developments over 2,500 sq m or 25 residential units will only be permitted where:</p> <ul style="list-style-type: none"> i) it does not conflict with the Transport Objectives of the Hertfordshire Local Transport Plan (2006 – 2011) and associated Accessibility Strategy; ii) it is accompanied by a suitable Travel Plan, prepared in accordance with guidance set out in the Parking Supplementary Planning Document; iii) it is in accordance with Hertfordshire County Council guidance and relevant Local Plan / Development Plan Document policies relating to the operation of the Highways network and the achievement of vehicular, and pedestrian and equestrian safety; and iv) it contributes, where required, to the provision or funding of new or improved public transport and non-motorised pedestrian and cycle routes.
<p>CS22 - Accessibility and parking</p>	<p>In order to facilitate fair access to local services, the quantity of off-street parking for all modes of transport, to be provided at new developments, will be based on an assessment of:</p> <ul style="list-style-type: none"> i) a site's location; ii) local car ownership; iii) the proposed land use (having regard to Table 18 for residential development); iv) housing tenure v) the potential for shared parking, over various times of the day and week, with other uses vi) local on-street parking conditions and controls; vii) highway and pedestrian safety considerations; viii) incentives to reduce dependency on the car and the provisions of any Travel Plan submitted; ix) the Accessibility Zones for the Borough; together with the extent of compliance with requirements set out in the Parking Supplementary Planning Document; and x) the extent to which permeable and semi-permeable surfaces are incorporated into the area of off-street parking to be provided
<p>CS23 - Promoting alternatives to the car</p>	<p>Policy CS23 Promoting alternatives to the car</p> <p>The Council will support a wide range of measures to provide safer and more reliable alternatives to the car for accessing new development and existing development and other destinations across the Borough including:</p> <ul style="list-style-type: none"> i) improved public transport facilities; ii) additional public transport routes and stops; iii) enhanced and new non-motorised links within and between urban and rural areas, along or additional to the existing rights of way and highways network, which increase walking, cycling or riding opportunities; and; iv) The safeguarding of proposed non-motorised routes, where necessary, to prevent development occurring which would prevent their future implementation. <p>New developments will be assessed in terms of their accessibility by a range of transport modes and where appropriate, measures to promote alternatives to the car will need to be provided as part of a proposed scheme, having regard to the requirements of the Parking Supplementary Planning Document.</p>
<p>CS24 - Town Centre Strategy</p>	<p>Development within the designated town, district or neighbourhood centres of Borehamwood, Potters Bar, Bushey and Radlett will be permitted provided that it maintains their primary retail</p>

Policy	
	function and wider role as a focus for business, leisure, cultural and other appropriate town centre uses. Retail activity elsewhere will be focused on local centres and parades which will be expected to retain a core of local shopping facilities and accommodate any new retail development, commensurate to their position within the town centre hierarchy. Proposals to create in excess of 2,500 sq m of new retail floorspace will be subject to the sequential test and should be focused on Borehamwood and Darkes Lane, Potters Bar town centres and will only be permitted where a clear quantitative need has been established and where it can be demonstrated that it would not harm any existing shopping centre.
CS25 - Strengthening Town Centres	The retail function and vitality of designated centres will be reinforced through the designation of primary and secondary shopping frontages in Borehamwood, Potters Bar, Bushey and Radlett. There will be a focus on (A1) retail uses within the primary frontages and scope for a wider range of activities in secondary frontages, with an emphasis on a mix of (A1) retail, (A2) financial and professional services and (A3) dining-in establishments. An appropriate proportion of other uses will also be permitted in secondary frontages, including (A4) pubs and bars and (A5) take away uses, together with other appropriate arts, leisure and entertainment uses. Details of frontages and uses will be set out in the Site Allocations DPD.
CS26 - Retail and commercial development in Shenley	<p>Policy CS26 Retail and commercial development in Shenley</p> <p>Small scale retail and commercial development in Shenley should be restricted to suitable sites within existing commercial areas. Locations will be identified in the Site Allocations DPD, based on those defined in the Shenley Parish Plan:</p> <ul style="list-style-type: none"> • along London Road in the south east of the village; and • at Andrew Close and the nearby junction between London Road and Porters Park Drive (excluding the reserve school site).
	Retail and commercial development in identified locations in Shenley should be of a size and scale which primarily serves the local community rather than drawing in large numbers of visitors from further afield.
CS27 - Safe and attractive evening economy	<p>The Council wishes to promote a range of uses in town centres for the whole community, creating a balanced evening economy including entertainment and late night retailing as well as eating and drinking establishments. The quantity, type and location of A3, A4, A5 and other evening or late night uses will be controlled, having regard to other Local Plan and Development Plan Document policies, together with the aims and objectives of the Crime, Disorder and Drugs Reduction Strategy for Hertsmere, including the need to reduce anti-social behaviour, crime and the fear of crime.</p> <p>Where new A3, A4 and A5 uses are permitted, financial contributions will be sought for related town centre improvements including additional CCTV, improved lighting and improved signage for CCTV and Alcohol Free Zones. In relation to those areas where concentrations of drinking establishments, night clubs or other evening or late night uses have caused existing anti-social problems, there will be a presumption against further consents for such uses.</p>

Table F.4 - Policy SP1 Creating Sustainable Development

Policy SP1 Creating Sustainable Development	<p>The use and development of all land will be assessed against the need to protect and enhance the natural and built environment, including the diverse character and local distinctiveness of the Borough. Development should take place within the environmental capacity of its locality and in proportion to its location within the hierarchy of settlements in the Borough. Development will be required to maximise the conservation of land, energy and resources and should be designed to a high standard, taking advantage of opportunities to improve the character and quality of an area.</p> <p>This is to be achieved through the careful management of the natural and built environment, close liaison with the Environment Agency and Natural England and the implementation of policies which reflect the principles of sustainable development. These policies will require development to be well located and focused on previously developed land wherever possible, reflecting the settlement hierarchy in the Core Strategy. Policies will be required which cover:</p> <ul style="list-style-type: none"> • Protection and enhancement of natural and historic assets (Policy CS11) • Environmental Impact of Development (Policy CS13) • Efficient Use of Natural Resources (Policy CS14) • The location and supply of new homes (Policy CS1) • Scale and Distribution of Employment Land (Policy CS7) • Development and Accessibility (Policy CS20) • Together with more detailed design and amenity policies in the Site Allocations and Development Control Policies DPDs

Table F.5 - Policy SP2 – Meeting local housing needs

Policy SP2 – Meeting local housing needs	<p>The Council will support new house building schemes on sites in sustainable locations, with a focus on development within the three Strategic Housing Locations of Borehamwood, Potters Bar and Bushey.</p> <p>Unless there are exceptional circumstances, no more than 40% of new housing will be sought in Borehamwood, up to 30% in Potters Bar, up to 30% in Bushey and up to 15% in Radlett and other suitable locations.</p> <p>Development proposals should ensure that any adverse effects on the built and natural environment are avoided and / or mitigated. Windfall developments will be supported on appropriate sites in all towns, subject to the environmental constraints and requirements of Policies SP1, CS 12, 14, 15 and other relevant planning policies. The provision of adaptable and affordably priced homes for the local community will be sought in all locations and suitable proposals from social rented landlords will be supported, where required, on qualifying development sites.</p>

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No effect	0	0	0	n/a	
2	To ensure ready access to essential services and facilities for all residents	By directing the majority of housing development to key settlements, linked to appropriate capacity thresholds, new provision should be well related to services and facilities by a variety of modes.	++	++	+++	None required as positive.	There will be a need to ensure that new housing development is well served by public transport, walking and cycling provision to maximise accessibility.
3	To meet identified housing needs and improve the quality and affordability of housing	The policy provides a spatial distribution strategy to meet the identified housing growth target. In addition, the requirement to provide adaptable and affordable housing	++	+++	+++	None required as positive.	There will be a need to ensure that the thresholds of 'qualifying development sites' are such that the provision of affordable/special needs housing is not jeopardised in order for the positive effects to be

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		in suitable locations is complementary to the objective.					realised.
4	To reduce poverty and social exclusion and promote equality of opportunities	By locating new residential development in accessible locations, well related to existing service centres, the policy should help to support increased social engagement and improve accessibility to jobs and services for a wider cross-section of the population.	+	++	++	Ensure that new housing development is accompanied by additional community facilities and services where appropriate.	Effects are likely to become increasingly beneficial over time as more housing developments are realised and social networks become more established.
5	To reduce and prevent crime, fear of crime and anti social behaviour	The policy seeks to ensure that new housing development includes an elements of affordable and special needs housing, as well as a range of tenure where appropriate – mixing of communities should help to reduce the risk of anti-social behaviour often associated with 'estate' type development.	+	+	+	Ensure that new residential development reflects best practice principles of designing out crime, both in buildings and the public realm.	The effects of the policy on the objective are limited by the fact that much is dependent on factors outside the control of environmental change alone.
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects	0	0	0	n/a	
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The policy supports development in accordance with the sustainable development principles of policy SP1, which requires brownfield development in advance of greenfield. The approach to windfall development is also complementary to this approach.	+	++	+/-	Building re-use should be encouraged as a means of reducing the requirement for new build housing provision.	Over the longer term, it is likely that in order to realise housing provision targets, some release of greenfield sites may be required.
8	To reduce contamination and safeguard soil quality and quantity	Linked to the above, in order to realise brownfield development in advance of greenfield, remediation of contaminated land is supported by the policy. However, new build development will inevitably result in the loss/disturbance of soils in some locations.	+/-	+/-	+/-	New development should be designed to the highest environmental standards, in accordance with the EcoHomes criteria.	Negative effects are likely to be more pronounced over time as more development is realised across the plan area.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	By directing residential development to key settlements based on thresholds of provision, the policy should help to minimise the impact of new building to an appropriate level in order to safeguard the character of established centres. There is, however, a risk that increased growth of settlement may have negative effects on historic building etc. through increased building and transport emissions.	++	++	++/-	New development should be designed to respect and respond to local vernacular. The form and layout of new residential development should reflect the existing character of settlements. New residential expansion should be well served by public transport, walking and cycling provision	Negative effects are likely to be more pronounced over time as more development is realised across the plan area.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
						linked to key services, facilities and employment.	
10	To maintain and enhance the quality of the countryside and landscape	The policy approach of directing new residential development to existing settlements should help to minimise expansion into greenfield sites. However, there is a risk that the cumulative effects in the longer term will result in an increase in the visual intrusion of built development on the landscape and alter the form of historic settlements.	++	++	++/-	Where development is likely to have a visual impact on the landscape, mitigation through planting and careful use of topographical features should seek to lessen any intrusion.	Negative effects are likely to be more pronounced over time as more development is realised across the plan area.
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	The policy approach of directing the majority of new residential development to existing key centres should help to reduce the need to travel, as well as provide new residents with a choice of non-road based transport modes, which will be complementary to the objective.	++	++	+++	There will be a need to ensure that sustainable transport infrastructure is in place in advance of the occupation of new development.	The effectiveness of the policy will depend on ensuring that non-road modes provide realistic and attractive alternatives to the private car – this will depend on some factors outside the control of land use planning.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	In setting out the spatial approach to the delivery of new residential development, the policy seeks to direct development to existing settlements, preferring brownfield over greenfield development. This should help to avoid the impact on open countryside and designated sites, however, there may be increased disturbance to some urban biodiversity networks and indeed loss of biodiversity interest on some brownfield sites. Increased transport movements may also have adverse effects on biodiversity.	++	++/-	++/-	<p>New residential development should incorporate habitat replacement/development as appropriate.</p> <p>Green space (public realm and gardens) should be designed to encourage use as wildlife corridors incorporating a variety of species types.</p> <p>Walking, cycling and recreational space should avoid sensitive locations to minimise human disturbance.</p>	Negative effects are likely to be more pronounced over time as more development is realised across the plan area.
13	To improve the quality of surface and ground waters	In increasing the amount of built development across the plan area, the policy presents an increased risk of pollutants entering the ground water system through increased and accelerated run off.	-	--	--	<p>Infrastructure associated with residential development should include run off filtration systems where appropriate.</p> <p>New residential development should incorporate SuDS where practicable.</p> <p>New residential development should be well served by public transport, walking and cycling networks to minimise the impact</p>	Negative effects are likely to be more pronounced over time as more development is realised across the plan area.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
						of transport based pollutants entering the water system.	
14	To minimise water consumption	In increasing the amount of residential development across the plan area, the policy will inevitably increase water consumption.	--	--	---	<p>New residential development should be designed to the highest environmental standards, including the EcoHomes criteria.</p> <p>SuDS should be supported in new development wherever possible.</p> <p>Greywater recycling should be incorporated into residential development as standard.</p>	Negative effects are likely to be more pronounced over time as more development is realised across the plan area.
15	To minimise the risk of flooding and take account of climate change	In increasing the amount of built development across the plan area, the risk of flooding through accelerating run-off may be increased. However, the spatial distribution of development seeks to avoid locations of known flood risk, or those sites most likely to result in a breaching of thresholds for flooding.	+/-	+/-	+/-	<p>New residential development should be designed to the highest environmental standards, including the EcoHomes criteria.</p> <p>SuDS should be supported in new development wherever possible.</p> <p>Greywater recycling should be incorporated into residential development as standard.</p>	Negative effects are likely to be more pronounced over time as more development is realised across the plan area.
16	To improve local air quality	In focusing new residential development in and around existing key centres, there is an increased risk of localised air quality issues associated both with built development and an increase in transport movements. This may be offset to some degree by the application of thresholds to the scale of development in each centre and conformity to Policy SP1, which seeks a reduction in energy use.	-/+	--/+	--/+	<p>New residential development should be designed to the highest environmental standards, including EcoHomes criteria.</p> <p>New residential development should be well served by public transport, walking and cycling networks to minimise the impact of transport based pollutants entering the atmosphere.</p>	Negative effects are likely to be more pronounced over time as more development is realised across the plan area.
17	To reduce greenhouse gas emissions	The policy sets out the spatial strategy for the delivery of an increased amount of residential development across the plan area, which will result in an increase in GHG emissions, both from buildings and increased transport movements.	--	---	---	<p>New residential development should be designed to the highest environmental standards, including EcoHomes criteria.</p> <p>New residential development should be well served by public transport, walking and cycling networks to minimise the impact</p>	Negative effects will be more pronounced over time as the cumulative effects of increased development are realised.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
						of transport based pollutants entering the atmosphere.	
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	An increase in the residential development across the plan area will increase energy requirements, although there may be opportunities to incorporate renewable energy generation in some schemes, which is supported by conformity of SP2 to SP1.	-	--	--/+	<p>New residential development should be designed to the highest environmental standards, including EcoHomes criteria.</p> <p>New residential development should be well served by public transport, walking and cycling networks to minimise the impact of transport based pollutants entering the atmosphere.</p> <p>Renewable energy technologies should be promoted for use in schemes where practicable.</p>	Some benefits are likely in the longer term as the combination of increased residential development and more advanced technologies make the prospect of domestic renewable energy use more readily available.
19	To reduce the generation of waste and encourage re-use and recycling of waste	An increase in residential development across the plan area will increase domestic waste generation. However, opportunities will exist for the development of sustainable waste management for new provision.	-	--	--/+	<p>New residential development should be designed to the highest environmental standards, including EcoHomes criteria.</p> <p>Sustainable waste management should be promoted for use in schemes where practicable.</p>	Some benefits are likely in the longer term as waste management and processing techniques become more advanced and widespread.
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	No obvious effects	0	0	0	n/a	
21	To sustain and enhance the viability and vitality of town centres	In directing new residential development to existing centres through a combination of expansion and infill development, the policy should help to increase the catchment of key town centres, improve accessibility and support increased vitality, which in turn supports viability of town centre businesses and services.	++	++	+++	None required as positive.	Effects are likely to be increasingly beneficial over time as additional population is attracted to key centres and the range of services that can be supported is increased.

Table F.6 - Policy SP6 – securing high quality design

Policy SP6 – securing high quality design	The Council will require all development to be of high quality design which is appropriate in scale to the local context and ensures the creation of attractive, usable, safe and accessible places. Development proposals will be expected to take advantage of opportunities to improve the character and quality of an area. The Council will also take account of the cumulative impact of new development on the character and appearance of an area including the impact arising from residential intensification and redevelopment within residential areas.

			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects	0	0	0	n/a	
2	To ensure ready access to essential services and facilities for all residents	The site identification criteria set out in the policy include a need to locate new development in the most accessible locations and focus on existing built-up areas, which are likely to contain established services and facilities. This should help to increase viability of the provision of public transport services as well as rendering walking and cycling a more realistic option for shorter trips, all of which will contribute to increased accessibility.	+	++	+++	There will be a need to ensure that all new residential development is well served by non-road transport infrastructure in advance of occupation.	The strategy of co-locating housing with existing settlements will only be successful against the objective if new development is fully networked by a range of transportation options. Increased benefits over time as a result of increased completion rates and thus a greater proportion of prospective residents enjoying improved accessibility.
3	To meet identified housing needs and improve the quality and affordability of housing	The policy sets out the commitment of the council to meeting the construction target based on the housing needs assessment for the region. .	+	++	++	There will be a need to ensure that the housing developed includes provision for affordable and special needs units, as well as a variety of sizes and types of units.	Matters relating to the type and tenure of housing (which is part of the objective) are addressed in other plan policies, thus the significance of benefits has been reduced.
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects	0	0	0	n/a	The policy only seeks to set out the general approach to providing a set number of units. There is insufficient detail to assess whether this will result in positive or adverse effects against the objective.
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects	0	0	0	n/a	
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects	0	0	0	n/a

			ST	MT	LT		
	previously developed land and existing buildings before Greenfield sites	presumption in favour of locating development of housing in the most accessible locations, the policy may help to deliver brownfield sites in favour of greenfield, although this is not overly explicit.					the phasing of brownfield and greenfield sites for housing. Density information also needs to be clarified in order for an assessment to be made with any certainty.
8	To reduce contamination and safeguard soil quality and quantity	The development of sites to accommodate 5000 houses over the plan period will inevitably require considerable land take. Although environmental constraints are likely to push some provision onto brownfield sites in need of remediation, the assessment criteria do not preclude the development of greenfield land.	+/-	+/-	+/-	Development should be directed to brownfield land in preference to greenfield sites. Materials for new development should seek to maximise use of renewable resources.	Negative effects are likely to increase over time as more sites are brought forward for development and pressure for land increases.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The consideration of historic assets and the impact of development upon them are included within the site assessment criteria, as is the need to respect existing development densities. Over the longer term, however, the development pressure to meet the 5,000 target is likely to result in some negative effects.	+++	++	++/-	The design of new development should respect and respond to the local vernacular.	
10	To maintain and enhance the quality of the countryside and landscape	The consideration of environmental constraints is included within the site assessment criteria, together with compliance with policies that seek to protect biodiversity and landscape features from adverse effects of development. Over the longer term, however, the cumulative effects of residential growth and likely to have negative effects.	+++	++	++/-	Loss of green belt land to development will need to be mitigated by a combination of landscaping and planting. Where habitats are lost to new development, the appropriate mitigation planting should be sought. The policy should include a phasing clause to ensure that green belt sites are only released for development once all available brownfield sites have been developed.	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	The site assessment criteria include the need to site development in the most accessible locations, and focus provision of housing within existing built up areas. This should increase the viability and practicality of public transport services as well as providing opportunities to reduce the need to	++	++	+++	There will be a need to ensure that development is well served by non-car based transportation provision in advance of occupation.	The effectiveness of the policy against the objective will be dependent on some elements that are beyond the scope of planning interventions.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		travel and increase linked trips, all of which may contribute to an encouragement to adopt more sustainable transport practices.					
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	Compliance with environmental protection policies is one of the site assessment criteria. In the short term this should provide conformity with the objective; however, longer term, development pressure is likely to result in negative effects arising from some severance and disturbance, particularly of wildlife corridors.	++	++/-	+/-	<p>Loss of land of biodiversity interest to development will need to be mitigated by a combination of landscaping and planting.</p> <p>Where habitats are lost to new development, the appropriate mitigation planting should be sought.</p>	Increasingly over time it is likely that development pressure will result in disturbance to habitats and biodiversity interest.
13	To improve the quality of surface and ground waters	Consideration of the impact of development on surface and ground water is included in the environmental constraints that form part of the site assessment criteria. However, increasingly over time, the realisation of 5000 new units will present an increased risk of pollution from buildings and transport movements.	++	++/-	+/-	<p>Infrastructure associated with residential development should include run off filtration systems where appropriate.</p> <p>New residential development should incorporate SuDS where practicable.</p> <p>New residential development should be well served by public transport, walking and cycling networks to minimise the impact of transport based pollutants entering the water system.</p>	
14	To minimise water consumption	The development of an additional 5000 dwellings over the plan period will evidently increase water consumption. Opportunities will exist to ensure that water conservation is incorporated into design.	--	--	--/+	<p>New residential development should be designed to the highest environmental standards, including the EcoHomes criteria.</p> <p>SuDS should be supported in new development wherever possible.</p> <p>Greywater recycling should be incorporated into residential development as standard.</p>	Effects are likely to become increasingly beneficial over time as new and improved technologies enable water conservation to become more widely available across the plan area.
15	To minimise the risk of flooding and take account of climate change	Flooding and the risk of flooding are incorporated in the environmental constraints that form part of the site assessment criteria. There may be an increased risk of flooding over time, however, as development sites near completion and permeable surfaces and	++	++/-	+/-	<p>SuDS should be supported in new development wherever practicable.</p> <p>Permeable surfacing should be incorporated into development where appropriate (e.g.</p>

			ST	MT	LT		
		increasingly replaced with impermeable development.				hardstanding)	
16	To improve local air quality	Increased residential development will result in increased emissions from buildings and transportation. This is likely to have significant adverse effects on local air quality in a number of locations, particularly given the policy approach of focusing development on the existing built up areas.	--	---	---	New development should be well served by public transport, walking and cycling networks in advance of occupation. New residential development should be designed to the highest environmental standards, including the EcoHomes criteria.	
17	To reduce greenhouse gas emissions	An increase of 5000 residential units over the plan period will result in a significant increase in net GHG emissions both from domestic units and associated transport movement.	--	---	---	New development should be well served by public transport, walking and cycling networks in advance of occupation. New residential development should be designed to the highest environmental standards, including the EcoHomes criteria.	
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	An increase in residential development of 5000 units will significantly increase the need for energy across the plan area and increasingly over time. However, in the longer term this may be offset to some degree by more widespread use of energy saving techniques and renewable energy technologies.	---	--	--/+	New residential development should be designed to the highest environmental standards, including the EcoHomes criteria. Opportunities for renewable energy technologies should be supported wherever possible.	Adverse effects may decrease over the longer term as renewable energy technologies become more advanced and more readily available.
19	To reduce the generation of waste and encourage re-use and recycling of waste	The development of an additional 5000 residential units will result in a significant increase in domestic waste generation. In the longer term, this may be offset to some degree by improvements in waste transfer and recovery technologies, coupled with increased recycling and composting.	--	---	--/+	Policies should pro-actively support the development of sustainable waste management through physical provision. New development should specify materials from sustainable sources.	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	No obvious effects	0	0	0	n/a	
21	To sustain and enhance the viability and vitality of town centres	In focusing additional housing provision on existing centres, the policy approach is likely to benefit town centres as new residents will provide additional critical mass to support	++	++	+++	None as effects are positive.	Effects are likely to be increasingly beneficial in the longer term as the population expands.

			ST	MT	LT		
	learning and employability						
2	To ensure ready access to essential services and facilities for all residents	Extension of the urban areas into green belt to accommodate additional housing requirements will require additional infrastructure to ensure accessibility to essential services and facilities. There may, therefore, be some negative effects.	?	-	--	There will be a need to ensure that all new development is well linked to services and facilities by non-road modes of transport.	Uncertainty in the short term due to lack of clarity on phasing of site release. Increasingly over the longer term, as more green belt sites are developed, negative effects are likely although the scale will be limited by the relatively small proportion of prospective residents that will be affected by the policy (restricted to the occupants of 550 homes max.)
3	To meet identified housing needs and improve the quality and affordability of housing	Expansion of site identification into the green belt in some locations has been incorporated in order to ensure that the housing targets can be met. A density target of 40 dph should help to maintain a comfortable residential environment, incorporating some open space.	+	++	++	New housing development, irrespective of location, should incorporate a range of types and tenure to encourage the development of mixed communities.	Increased benefits over time as more housing is constructed to meet needs.
4	To reduce poverty and social exclusion and promote equality of opportunities	The development of housing in former green belt areas may have some negative effects since it will increase travelling distances for prospective resident to access key service settlements and may reduce transport choices.	-	-	--	All new development should be well served by non-road transport infrastructure in advance of occupation.	The scale of effects will be limited by the relatively small proportion of prospective residents that will be affected by the policy (restricted to the occupants of 550 homes max.)
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects	0	0	0	n/a	
6	To improve population's health and reduce inequalities both geographically and demographically	Encroachment of built development into the green belt may, albeit to a limited extent, reduce accessibility to open space and recreational land for some residents, as well as having a negative effect on the carbon sink, which is important in maintaining air quality (and thus respiratory health).	-	-	--	New development should be designed to incorporate green space and access to recreational land. Where habitats are lost to new development, the appropriate mitigation planting should be sought.	Effects are likely to be more pronounced over time as land is developed.
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The allocation of green belt sites for housing development at the outset of the plan period is contrary to the aims of the objective.	---	---	---	The policy should include a phasing clause to ensure that green belt sites are only released for development once all available brownfield sites have been developed.	
8	To reduce contamination and safeguard soil quality and quantity	The re-allocation of green belt land for housing will result in the permanent loss of soils and a reduction in soil quantity at the local level.	?	-	--		Uncertainty in the short term due to lack of clarity relating to the phased release of land for development. Increasingly negative effects in the longer terms as sites are developed. Scale of effect not significant on the basis that the land take should be limited to c. 14ha. on the basis of 40 dph.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	Loss of green belt to development will have some effects on the landscape character of the affected sites.	-	--	--	<p>Loss of green belt land to development will need to be mitigated by a combination of landscaping and planting.</p> <p>Impact on the historic character of the locale should form one of the assessment criteria for site identification.</p>	Scale of effect not significant on the basis that the land take should be limited to c. 14ha. on the basis of 40 dph.
10	To maintain and enhance the quality of the countryside and landscape	The re-allocation of green belt land for housing will be contrary to the objective as it will result in loss of countryside.	--	---	---	<p>Loss of green belt land to development will need to be mitigated by a combination of landscaping and planting.</p> <p>Where habitats are lost to new development, the appropriate mitigation planting should be sought.</p> <p>The policy should include a phasing clause to ensure that green belt sites are only released for development once all available brownfield sites have been developed.</p>	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Residential development on green belt land is likely to increase the need to travel in order to access established facilities and services.	+/-	+/-	++/-	All new development should be well-served by non-road modes in advance of occupation.	In the longer term it is likely that improved infrastructure will increase transport choices to a wider section of the population, thus there may be an increase in modal shift over time.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	The re-allocation of green belt land for housing is likely to result in the loss of sites of local biodiversity interest.	-	--	---	<p>Loss of green belt land to development will need to be mitigated by a combination of landscaping and planting.</p> <p>Where habitats are lost to new development, the appropriate mitigation planting should be sought.</p> <p>The policy should include a phasing clause to ensure that green belt sites are only released for development once all available brownfield sites have been</p>	The threat of negative effects increases over time as development pressure increases..

			ST	MT	LT		
							provide up to date information to inform the five year housing supply in Hertsmere.
4	To reduce poverty and social exclusion and promote equality of opportunities	A managed release of housing should enable housing allocation sites to take account of areas of deprivation and use housing development as a catalyst for promoting equality of opportunities for housing. The availability of supporting infrastructure and the need to provide additional capacity for community facilities prior to the release of housing may also combat poverty and social exclusion. In the short and medium term the effects are likely to be positive and permanent. However, if regional housing targets are exceeded, the Council will restrict the amount of new housing and as such, may result in negative effects on deprivation in the longer term.	++	++	-	This objective will be monitored through the AMR.	The Site Allocations DPD will identify the housing sites and as such, will confirm the scale and significance of the positive effects which will depend on the extent to which allocated sites are included in areas of deprivation.
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	Designing out crime should be encouraged in new housing developments.	Designing out crime should be encouraged in new housing developments.
6	To improve population's health and reduce inequalities both geographically and demographically	Provision of housing on Greenfield sites may reduce the populations' ability to access open space for physical activity. This could have a slight long term negative effect on health.	-	-	-	Where Greenfield is developed, land elsewhere should be identified for replacement of the lost open space or current local open space facilities should be improved as part of developer contributions.	
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	See assessment of Core Policy CS1 'Location and Supply of New Homes'. Positive effects are likely in the short to term, however there is potential for a negative effect in the medium to long term. The potential for a negative effect is related to the provision of housing on Greenfield sites in phase 2 and phase 3.	+	-	-	Where the use of Greenfield sites are identified as essential, building density should be high in order to limit land take as much as possible.	This policy is closely linked to Core Policy CS1 in terms of providing new housing development during the plan period but refers to the phasing of the housing.
8	To reduce contamination and safeguard soil quality and quantity	The use of Greenfield sites could cause loss and degradation of soil in the medium to long term.	+	-	-	As above	As above.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The use of Greenfield sites could have a medium to long term negative effect on landscape character.	+	-	-	As above	As above.
10	To maintain and enhance the quality of the countryside and landscape	As above	+	-	-	As above	As above.
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	The use of Greenfield sites may cause houses to be further away from the main services and infrastructure which may increase the need to travel by private car for sections of the community. This will have a medium to long term negative effect.	+	-	-	As above	As above.

	opportunities for lifelong learning and employability						
2	To ensure ready access to essential services and facilities for all residents	By focusing new employment use in existing established employment areas will ensure good accessibility for opportunities to employment. The positive effects are likely to be permanent and be consistent in the short, medium and long term.	++	++	++		In combination with sustainable transport policies (CS21 and 22), opportunities for accessibility are likely to be enhanced significantly. The scale and significance of these positive effects will be confirmed through the SA of the Site Allocations DPD.
3	To meet identified housing needs and improve the quality and affordability of housing	This policy allows for the release of existing employment sites for new housing where appropriate through the Site Allocations DPD. The release of sites would contribute to providing sites to meet identified housing targets and housing needs resulting in overall positive effects. The effects are assessed as being minor and dependent on the findings of the urban capacity study and employment study and the likely shortfall/surplus in both housing and employment uses.	+	++	+++		The scale and significance of these positive effects will be confirmed through the SA of the Site Allocations DPD where the boundaries of existing employment and housing sites are identified.
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0		
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0		
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0		
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	Redistribution of land may result in more efficient use of land in general with employment land being situated in suitable areas and vice versa with housing land. This will have a minor positive effect.	+	+	+		
8	To reduce contamination and safeguard soil quality and quantity	The loss of poorly located employment sites or sites within housing areas presents the opportunity for decontamination of land and improvements to soil quality locally. The application of CS Policy 15 will allow for remediation of contaminated land. The re-distribution of employment sites will seek to safeguard soil quality and quantity elsewhere. The effect will be	+	+	+		Measures should be taken during construction and operation to minimise contamination risk.

SA Objectives	Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation

	positive but not significant.					
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	+	+	+		
10	To maintain and enhance the quality of the countryside and landscape	+	+	+		
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	-/+	+	+	Early development of work travel plans to minimise short term negative effects. Establishment of good, frequent and reliable public transport links.	Cross reference to Core Policy CS 21 relating to encouraging green travel plans.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	+	+	+		
13	To improve the quality of surface and ground waters	-	-	-	Mitigation measures during construction and operation to minimise pollution risk.	Successful implementation of Core Policy 15 should help to minimise the effects of new development.
14	To minimise water consumption	0	0	0	n/a	Reference to BREEAM offices during design to minimise water consumption. See CS Policy 15.
15	To minimise the risk of flooding and take account of climate change	-	-	-	Development decisions must be guided by the principles of PPS25. Developments should also be designed to be capable of withstanding flood events i.e. by identifying appropriate ground and basement floor uses. Flood risk assessments will be required for the development of sites that lie within flood zones 2 and 3 as defined by the Environment Agency.	Successful implementation of Core Policy 15 should help to minimise the effects of new development.
16	To improve local air quality	+/-	+	+	Measures to reduce any pollution during the construction phase through the implementation/reference to a Construction and Environment Management Plan.	Successful implementation of Core Policy 15 should help to minimise the effects of new development.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		existing areas are of high public transport accessibility. However during construction there maybe some negative effects on air quality in the short term.					
17	To reduce greenhouse gas emissions	Possible reduction in car use and the need to travel due to provision of employment land in accessible locations would have a minor positive effect on reducing greenhouse gas emissions in the long term.	+	+	+	Not required as effect positive.	Reference to BREEAM office to ensure good design which promotes energy efficiency. Recommend cross referencing to Core Policy 23 in promoting alternatives to the car and ensuring green travel plans are in place in new development (CS Policy 22) to strengthen policy. Successful implementation of such policies should contribute to this objective.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The redistribution of employment sites on the basis of improving the ease and attractiveness of development (through selective release of sites) should help to increase take up of employment sites for development as well as enabling development of former employment sites for alternative uses. Significant positive effects are likely to be Borough wide.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	The release of constrained employment sites within town centres for alternative forms of development may have benefits for town centre vitality and viability through enabling beneficial development of vacant/under-used sites, for example for housing or leisure uses. Significant positive effects are likely to be permanent.	+	+	+	Not required as effect positive.	

Appendix G - Assessment of Additional Alternatives (2010 and 2011)

Table G.1 - Assessment of alternative growth options , December 2010

Option 1 – 2,300 dwellings accommodated within urban brownfield sites	Option 2 – 3,200 dwellings accommodated within Urban Brownfield sites and urban greenfield sites	Option 3 – 3,900 dwellings accommodated within urban brownfield sites and urban greenfield sites plus limited use of Green belt Strategic Housing Land Availability Assessment (SHLAA) sites focused on Borehamwood and Potters Bar, limited impact on strategic gaps between settlements	Option 4 – 5,300 accommodated within urban brownfield sites and urban greenfield sites plus maximum use of green belt SHLAA sites plus some less sustainable sites/ intensification in urban areas.	Option 5 – 6,750 dwellings accommodated within urban Brownfield sites, urban greenfield sites; potential redevelopment of industrial areas in Borehamwood; maximum use of green belt SHLAA sites plus some less sustainable sites/ intensification in urban areas/; significant peripheral extensions around most settlements including Radlett and Bushey; pressure on strategic gaps between Radlett, Bushey and Borehamwood; significant western extension of Borehamwood and south and west of Potters Bar with need for additional infrastructure.

			Option 1 – 2,300 houses		Option 2 – 3,200 houses		Option 3 – 3,900 houses		Option 4 – 5,300 houses		Option 5 – 6,750 houses
3.	To meet identified housing needs and improve the quality and affordability of housing	-	This option involves the assumption of zero net migration. In case this projection proves to be too pessimistic, this option may lead to a shortage of housing. Additionally, the overall lower housing numbers are likely to compromise the delivery of the required numbers of affordable housing.	++	This option is based on the recent modelling of projected increase of households up to 2026. Therefore, this option is considered beneficial, enabling the projected level of growth.	++	Effects are similar to those under option 2.	+++	Delivery of higher housing targets should help accommodate higher numbers of affordable homes.	+++	Delivery of higher housing targets should help accommodate higher numbers of affordable homes.
4.	To reduce poverty and social exclusion and promote equality of opportunities	-	As this option is likely to fail to deliver the required numbers of affordable homes, it scores negatively in terms of reducing social exclusion and poverty.	+	This option accommodates higher housing targets overall and therefore is more likely to deliver the required level of affordable housing, thus helping eliminate social exclusion. However, consideration should be given to setting the right thresholds for affordable housing requirement.	++	This option accommodates higher housing targets overall and therefore is more likely to deliver the required level of affordable housing, thus helping eliminate social exclusion.	+/-	Although options 4 and 5 are likely to deliver higher level of affordable housing overall, their contribution to reducing social exclusion and promoting equality of opportunities is likely to be undermined by more limited access to key services and facilities for all.	+/-	Although options 4 and 5 are likely to deliver higher level of affordable housing overall, their contribution to reducing social exclusion and promoting equality of opportunities is likely to be undermined by more limited access to key services and facilities for all. The significance of negative effects under option 5 is higher than for option 4 due to the more remote location of significant part of new development.
5.	To reduce and prevent crime, fear of crime and anti social behaviour	+	Indirect positive effects associated with higher level of accessibility to facilities and opportunities for all. In particular, this is likely to help engage young people in positive activities.	+	Similar indirect positive effects to those under option 1.	+	Similar indirect positive effects to those under option 1.	-	On the contrary to options 1-3, options 4 and 5 are likely to reduce accessibility to opportunities and facilities for all. Specifically, this may create inequalities in young people's access to positive activities,	--	On the contrary to options 1-3, options 4 and 5 are likely to reduce accessibility to opportunities and facilities for all. Specifically, this may create inequalities in young people's access to positive activities, and thus create conditions for

									and thus create conditions for anti-social activities and behaviour.		anti-social activities and behaviour. The significance of negative effects under option 5 is higher than for option 4 due to the more remote location of significant part of new development.
6.	To improve population's health and reduce inequalities both geographically and demographically	+	Indirect positive effects associated with higher level of accessibility to facilities and services for all. This includes access to health care facilities and sport centres. Further, shorter distances to work and education facilities are likely to encourage walking and cycling, benefitting public health.	+	Similar indirect positive effects to those under option 1.	+	Similar indirect positive effects to those under option 1.	-	Negative effects on public health are likely due to more limited access to services and facilities, including health care and sport facilities, for all. More remote location is not likely to be conducive for the taking up of more active and healthy lifestyles (walking and cycling).	--	Negative effects on public health are likely due to more limited access to services and facilities, including health care and sport facilities, for all. More remote location is not likely to be conducive for the taking up of more active and healthy lifestyles (walking and cycling). The significance of negative effects under option 5 is higher than for option 4 due to the more remote location of significant part of new development.
7.	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	++	All options involve the development of urban brownfield sites before greenfield sites. However, only option 1 does not involve the development of any greenfield sites, therefore it scores most positively against this objective.	+	This option involves the use of urban Greenfield land, after the capacity of brownfield sites has been fully used up. One significant urban greenfield site has been identified in the SHLAA.	-	This option involves the encroachment of new housing development onto the Green Belt, although its take up is not as significant as under options 4 and 5.	--	Negative effects are predicted due to maximum use of Green Belt SHLAA sites.	---	Negative effects of higher significance than under option 4 are likely due to an even larger take up of green field land through additional peripheral extensions.
8.	To reduce contamination and safeguard soil quality and	++	This option is considered most positive in terms of safeguarding soil	+/-	This option is likely to involve a higher level of increase in hard surfacing, and thus higher rates of polluted	-	Compared to option 2, this option involves some use of Green Belt sites; therefore its	--	Both options 4 and 5 involve maximum use of Green Belt sites, therefore predicted	+/ ---	Take up of green field land and the level of increase in hard surfacing under this option are the

	quantity		quality and quantity, as it involves only brownfield sites' development. Accommodation of lower housing numbers will involve a minimum increase in impermeable surfacing (if any) and reduced rates of polluted runoff.		runoff, affecting the water cycle and soil quality, compared to option 1. However, it contains the development within the urban area; therefore, it is considered to perform better than options 3-5.		effects are more negative compared to option 2.		potential negative effects on soil quality and quantity are significant.		highest, therefore, predicted effects on soil quantity and quality are most negative of all options. However, redevelopment of industrial areas under this option may lead to a cleanup of contaminated land, offsetting negative effects to some extent.
9.	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	+	By virtue of its lowest number of houses and the sole use of brownfield sites, this option performs most positively of all options, as its effects on heritage assets, their setting and landscape are likely to be minimal. There will also be scope for improving settings of heritage assets through sympathetic design under this option.	+/-	This option involves take up of green field sites within urban areas, thus potentially affecting the quality of local townscape and amenities. However, as the development is contained within the urban areas, it is unlikely to affect the wider landscape, therefore this option performs better than options 3-5.	-	Due to some use of Green Belt land, this option is likely to have minor adverse effects on the Borough's landscape, in addition to effects on the townscape similar to those predicted under option 2.	--	This option involves maximum use of SHLAA green field sites within the Green Belt. Therefore large-scale adverse effects on the local landscape are highly likely.	---	Adverse effects on landscape character are even more significant under this option compared to option 4, as in addition to maximum use of SHLAA sites within the Green Belt, this option involves significant extensions of urban centres and pressure on strategic gaps between settlements. Pressure on strategic gaps may lead to adverse visual effects on the Borough's conservation areas.
10.	To maintain and enhance the quality of the countryside and landscape	+	This option involves the sole development of brownfield sites, therefore is more likely to preserve the quality of the countryside.	+/-	This option involves take up of green field sites within urban areas, thus potentially affecting the quality of local townscape, however, the quality of the local countryside would be preserved under this option.	-	Due to some use of Green Belt land, this option is likely to have minor adverse effects on the Borough's landscape.	--	This option involves maximum use of SHLAA green field sites within the Green Belt. Therefore, large-scale adverse effects on the local landscape are highly likely.	---	Adverse effects on landscape character are even more significant under this option compared to option 4, as in addition to maximum use of SHLAA sites within the Green Belt, it involves significant extensions of urban centres and pressure on strategic gaps between settlements.
11.	To reduce	++	Both options 1 and 2	++	Both options 1 and 2	+	Option 3 involves	-	Maximum use of Green	--	In addition to land use

			Option 1 – 2,300 houses		Option 2 – 3,200 houses		Option 3 – 3,900 houses		Option 4 – 5,300 houses		Option 5 – 6,750 houses
	dependence on private car and achieve modal shift to more sustainable transport modes		accommodate new housing within the existing urban areas, therefore it is likely that key services and facilities will be in good reach by public transport or walking and cycling.		accommodate new housing within the existing urban areas, therefore it is likely that key services and facilities will be in good reach by public transport or walking and cycling.		limited use of Green Belt sites near Borehamwood and Potters Bar, therefore, overall the larger part of new development is likely to be accessible by public transport, walking or cycling.		Belt sites and use of some less sustainable sites in urban areas is envisaged under option 4. Some of these sites are unlikely to be easily accessible by public transport or walking/cycling.		under the rest of the options, option 5 involves significant peripheral extensions. This may increase dependence on private car.
12.	To protect and enhance wildlife and habitats which are important on an international, national and local scale	+	Even though brownfield sites can also provide habitats to wildlife, overall this option is deemed to perform most positively of all other options against this objective, as it would result in the lowest land take and is not likely to introduce significant level of disturbance to the wildlife.	+/-	This option involves the use of urban greenfield sites in addition to brownfield sites, therefore, its effects are likely to be more significant compared to option 1. However, in relative terms, this option performs better than options 3-5, as it contains development within the existing urban centres. In addition, based on the urban greenfield sites in the SHLAA, no sites of wildlife importance would be directly affected.	-	Some use of Green Belt sites and impact on strategic gaps are likely to lead to some loss of habitats and introduce disturbance to the local wildlife.	--	Maximum use of Green Belt sites is likely to lead to more significant loss of and fragmentation of habitats compared to option 3. In addition higher number of new houses is likely to create more disturbance to the local wildlife (e.g. recreation use, noise, etc).	---	Effects are similar to those under option 4 but of higher significance due to the larger land take involved and higher levels of disturbance introduced.
13.	To improve the quality of surface and ground waters	0	No obvious effect.	-	Negative effects may arise through the take up of green field land and an increase in hard surfacing, as this is likely to lead to higher rates of polluted runoff affecting water bodies.	-	Negative effects may arise through the take up of green field land and an increase in hard surfacing, as this is likely to lead to higher rates of polluted runoff affecting water bodies.	--	Effects similar to those under options 2 and 3 but of higher significance due to larger land take.	---	Effects similar to those under options 2-4 but of higher significance due to larger land take.
14.	To minimise water consumption	0	No obvious effect.	0	No obvious effect.	0	No obvious effect.	--	High levels of housing growth may lead to a significant increase in water consumption rates and place pressure on the capacity of local water supply.	---	High levels of housing growth may lead to a significant increase in water consumption rates and place pressure on the capacity of local water supply.

			Option 1 – 2,300 houses		Option 2 – 3,200 houses		Option 3 – 3,900 houses		Option 4 – 5,300 houses		Option 5 – 6,750 houses
18.	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	+	The lowest number of dwellings delivered under this option translates into the lowest level of energy consumption and embodied energy. The option also performs well in terms of transport energy efficiency. The use of renewable energy is expected to increase under all options in the future.	+/-	The option involves higher number of dwellings to be delivered than under option 1, therefore this would involve higher embodied energy and energy consumption levels. However, the option performs well in terms of transport energy efficiency. The use of renewable energy is expected to increase under all options in the future.	-	The option involves higher number of dwellings to be delivered than under option 2, therefore this would involve higher embodied energy and energy consumption levels. Negative effects may be offset in the future to some extent with higher use of renewable energy.	--	Effects similar in nature to those under option 3 but progressively more negative, as the development level is higher. Options 4 and 5 also increase reliance on private cars powered predominantly by carbon based fuels.	---	Effects similar in nature to those under option 3 but progressively more negative, as the development level is higher. Options 4 and 5 also increase reliance on private cars powered predominantly by carbon based fuels.
19.	To reduce the generation of waste and encourage re-use and recycling of waste	+	The lowest number of dwellings delivered under this option translates into the lowest level of the natural resources use and construction waste generated as well as future household waste.	+/-	This option involves higher housing numbers so performs slightly worse than option 1 but better than the rest of the options.	-	As the housing numbers increase, this translates into higher level of use of natural resources and generation of construction and household waste.	--	Effects similar in nature to those under option 3 but progressively more negative, as the development level is higher.	---	Effects similar in nature to those under option 3 but progressively more negative, as the development level is higher.
20.	To provide a prosperous, balanced and stable economy	-	If the assumption of zero net migration proves wrong, the lack of housing for workers may undermine the local economy.	+	Options 2 and 3 support projected rates of growth and therefore should provide adequate housing for workers.	+	Options 2 and 3 support projected rates of growth and therefore should provide adequate housing for workers.	++	Provision of higher housing numbers under this option is based on the assumption of higher economic growth. Therefore, the reason for this option's development determines its beneficial effects against this SA objective.	++	Development of this option is also underlined by higher economic growth assumption, therefore, predicted effects are similar to those under option 4.

			Option 1 – 2,300 houses		Option 2 – 3,200 houses		Option 3 – 3,900 houses		Option 4 – 5,300 houses		Option 5 – 6,750 houses
21.	To sustain and enhance the viability and vitality of town centres	++	Options 1-2 locate development within the existing urban areas, which should benefit the vitality and viability of town centres.	++	Options 1-2 locate development within the existing urban areas, which should benefit the vitality and viability of town centres.	+	Predominant part of new development under option 3 will be located within the existing urban areas, which should support the vitality and viability of town centres.	0	Significant proportion of development to be delivered under options 4 and 5 will be located within the Green Belt and urban extensions, diverting focus from town centres. However, effects are deemed to be neutral overall, as available sites within the existing urban areas will be developed first with some benefits for town centres.	0	Significant proportion of development to be delivered under options 4 and 5 will be located within the Green Belt and urban extensions, diverting focus from town centres. However, effects are deemed to be neutral overall, as available sites within the existing urban areas will be developed first with some benefits for town centres.

Table G.1 - Assessment of alternative options for employment development, November 2011

<p>Option 1 – Do not allow the release of any existing designated employment land: Existing and emerging government policy advocates a flexible approach to employment land designations. This option would not allow the Council to respond to market signals.</p>	<p>Option 2 – Allow the release of existing employment land with no compensatory designations: The Hertfordshire London Arc Study identified small shortfalls in space for office and other B-class uses. This approach might not allow the Council to make an appropriate level of provision for existing jobs and any future employment growth in the Borough. This is especially the case given the current level of interest in redeveloping some sites within Employment Areas for housing and the reality that previously envisaged employment development in neighbouring districts, including business parks, may not come forward. Furthermore, such an approach would lead to applications for employment development beyond existing designated employment areas being considered on a case-by-case basis. This may result in unsatisfactory developments taking place in an unplanned way and in locations that are not well suited to B-class use.</p>	<p>Option 3 – Designate new business park / extension to an Employment Area: Although the Hertfordshire London Arc Study identified small shortfalls in space for office and other B-class uses, it is recognised that these may fall within the margin of error. Empirical evidence suggests that there is currently an oversupply of B-class accommodation in the Borough. On account of this, and given that it is considered that a flexible approach is required, the Council should not commit to a new designation at this stage.</p>	<p>Option 4 – Safeguard land for a new business park / extension to an Employment Area within the built up areas of an existing settlement: There are no known deliverable or developable locations for a new employment park or an extension to an existing Employment Area within the Borough's settlements. Most available urban sites are relatively small and bound by residential properties and are not, therefore, well suited to accommodating B2, B8 and some B1 uses.</p>	<p>Option 5 – Safeguard land for a new business park elsewhere: This option would most likely have an unacceptable impact on the Green Belt in comparison to the impact that would result from an extension to an existing Employment Area. In addition to any new B-class accommodation, a new business park would require new access arrangements, services and other ancillary forms of development. Moreover, a new stand-alone business park would not benefit from links to the existing business community. Also, if located away from a settlement, a Business Park would most likely be heavily car-reliant and unsustainable, as it would not be within close proximity of a concentration of local services and facilities.</p>	<p>Option 6 - Safeguard land for an extension of the Stirling Way / Station Close / Otterspool Way / Centennial Park Employment Area: The land surrounding these existing Employment Areas was assessed to determine whether or not it was considered suitable for an extension of the adjoining Employment Area. All land was considered in relation to the likely impact of its development on the openness of the Green Belt, its accessibility and proximity to the strategic road network, and its availability, as well as any limitations imposed by other constraints and the location of the existing Employment Area.</p>	<p>Option 7 - Safeguard land for an extension of to existing employment area of Elstree Way, Borehamwood and Cranborne Road, Potters Bar: Elstree Way, Borehamwood - On balance, it is considered the development of this area of land would have a limited impact on the openness and purposes of the Green Belt. The A1 acts as a natural boundary to Borehamwood and a significant amount of hardstanding, currently used for the parking of vehicles, already exists. Cranborne Road, Potters Bar - the development of the safeguarded land would bring wider benefits to the employment area, which is the principle industrial estate in the town and currently has no capacity for growth.</p>

						economic development.									beneficial, as they would bring wider benefits to the existing employment areas in the two main settlements in the Borough.
21.	To sustain and enhance the viability and vitality of town centres	0	No obvious effects.	0	No obvious effects.	0	No obvious effects.	0	Safeguarding land for employment development within the built up areas of existing settlements may have positive effects on the vitality of town centres through an increase of footfall.	0	No obvious effects.	0	No obvious effects.	0	Extending the Elstree Way area should be beneficial for the Borehamwood town centre, as new jobs are likely to be taken by the local residents, which should increase footfall in the town centre, in particular in early evenings.

Appendix H - Assessment of Preferred Policies (December 2010)

H.1 Revised Core Strategy for Consultation, 2010

H.1.1 The Core Strategy version submitted to the Secretary of State in 2008 was later withdrawn by the Council following concerns about soundness and in order to ensure that the document was compliant with revised government guidance. The revised Core Strategy (2010) took account of previous consultations, government guidance and evidence base documents. The updated policies are shown in Table 6.4. A commentary of policy changes and likely effects are shown for each policy below. Where no significant changes were identified, the previous assessment results were briefly summarised for each policy. Two new policies: Policy CS16 'Energy and CO₂ Reductions' and Policy CS22 'Elstree Way Corridor' added to the Core Strategy were subject to full assessment presented in Appendix H.

SP1 - Creating Sustainable Development

H.1.2 There were minor wording changes to this policy; however there was no significant change to the meaning or emphasis of the policy and thus the previous assessment remains valid. This overarching policy on various aspects of sustainability steers the implementation of the other, more specific, Core Strategy policies towards a more sustainable path.

CS1 -The supply of new homes

H.1.3 This policy was updated to reflect the reduced number of houses that needs to be supplied following the anticipated abolition of the Regional Spatial Strategies – 3,200 over 15 years rather than 5,000 new homes over 20 years (a 13% annual reduction) need to be provided. Originally, some Green Belt land release would have been required, but with reduced numbers, it was no longer anticipated that Green Belt land would be required.

H.1.4 In the assessment on the Policy CS1 at the preferred option stage (see Appendix F), the Policy had been assessed, assuming the delivery of 5,000 houses. Taking into account the changes to the Policy, there would be a number of changes to the assessment as discussed below.

H.1.5 In terms of social objectives, there was no change to the assessment undertaken in Appendix F; significant beneficial effects have been identified in terms of providing access to services (Objective 2) and meeting identified housing needs (Objective 3). Although fewer dwellings were to be provided, this was based on the updated projections of the Chelmer model used to predict the number of households required for Hertsmere in the period up to 2026. The revised housing provision equated to 218 dwellings per annum, meeting realistic local housing needs.

H.1.6 In terms of environmental objectives there were the following changes to the assessment:

- As the Policy no longer required the release of greenfield land in the Green Belt and given that the new target of 3,200 homes reflected the predicted availability of previously developed sites, its performance against objective 7 (making use of previously developed land) was likely to improve to moderately positive effects from uncertain effects in the previous assessment.
- Similarly the Policy's performance was strengthened against objective 8 (reducing land contamination and safeguarding soil quantity and quality). A mix of negative and positive effects against this objective was predicted previously. Given the fact that housing development would no longer require release of greenfield land in the Green Belt, this was assessed as having a slight beneficial effect.
- In the previous assessment, a long term negative effect was identified against maintaining and enhancing the quality of the countryside and landscape (objective 10); given that development would not be on the Green Belt land, this effect was slight positive.
- Objective 12 on protecting and enhancing wildlife and habitats was previously assessed as having a significant negative effect in the long term. The significance of the effects was

tempered and it was assessed as having only a slight negative effect as the loss of significant quantities of greenfield land, and thus loss and severance of habitats, would be avoided.

- A mix of positive and negative effects with negative effects prevailing in the longer term was previously predicted against objectives 13 (water quality) and 15 (flooding). As the number of new homes each year was then reduced by 13%, the increase in hardstanding and impermeable surfaces associated with their delivery would be reduced. This would lessen the predicted effects on the water cycle and rate of runoff, thus improving the Policy's performance against these objectives, which was deemed neutral overall for both objectives.
- The significance of previously predicted strong negative effects against objectives 16 (air quality) and 17 (greenhouse gas emissions) was likely to lessen due the decreased number of housing provision, as the level of GHG emissions from new development and related transport would be lower. Therefore, the re-appraised effects against these objectives were likely to be moderately negative.
- The significance of previously predicted strong negative effects against objectives 19 (waste) was likely to diminish due to the decreased number of housing provision and, hence, lower levels of construction and household waste. Additionally, effective implementation of the other policies aiming to ensure waste minimisation and encourage recycling within the development would help mitigate effects against this objective. Therefore, the re-appraised effects against this objective were likely to be minor negative.

H.1.7 There was no change to the assessment of the economic objectives.

Former CS2 – Housing beyond existing built up areas

H.1.8 The former policy CS2 'Housing beyond existing built up areas' was recalled, as the identification of new sites within the Green Belt was no longer required. This change resulted in the removal of previously predicted significant negative effects against SA objectives 7 (efficient use of use of land), 9 (historic buildings and archaeological sites), 10 (countryside and landscape), 12 (wildlife and habitats), 15 (flooding), 16 (air quality) and 18 (energy).

CS2 – The location of new homes

H.1.9 Policy CS2 previously formed part of Policy CS1. It directs new development to Borehamwood, Potters Bar, Bushey and Radlett. The percentage split of the development in these settlements was slightly revised to reflect the findings of the Council's Strategic Housing Land Availability Assessment (SHLAA). This did not affect the findings of the previous assessment of this Policy as part of Policy CS1; however, the changes to the assessment of Policy CS1 outlined above also applied to Policy CS2.

CS3 – Phasing of Development

H.1.10 Policy CS3 on Phasing of Development was updated to reflect the anticipated abolition of the East of England Plan. Previously the policy referred to the East of England Plan and stated that sites would be provided in three predefined five year phases. It also stated that based on the findings of Annual Monitoring Reports, allocated land in later phases would be brought forward, if necessary, to maintain the five year supply of land for housing. The updated policy stated that Housing sites would be phased in five year periods from 2011 and it also made reference to Annual Monitoring Reports for land allocation in later phases, which would be brought forward if necessary to meet targets. As the updates on this policy related mainly to the removal of the reference to the East of England Plan, they did not affect the policy's sustainability performance.

H.1.11 A phased programme for housing was likely to ensure the delivery of sustainable communities across Hertsmere and ensure that infrastructure is in place to reduce the burden on existing infrastructure. Therefore this policy was assessed as having overall positive effects on the relevant social objectives (2, 3 and 4) and economic objective 20 (stable economy). The assessment of the policy against the environmental objectives mirrored that of the assessment of

Policy CS1 and, hence, the improvements to the scoring against the environmental objectives outlined above for Policy CS1 also applied to Policy CS3.

CS4 - Affordable Housing

- H.1.12 Policy CS4 was updated to ensure that the targets for the affordable housing provision and thresholds were realistic and that they took account of a recent study, examining the impact of affordable housing requirements on the viability of development. The Council aimed to balance the need to maximise provision with deliverability. The level of affordable housing required was still set at 35%, however, the threshold for requiring an affordable contribution was lowered to 10 units or sites of 0.3 hectares from the previously set 15 units or 0.5 hectares. Therefore, although in real terms the number of affordable houses would be lower due to fewer houses being delivered in total; this was considered to be counterbalanced by lowering the threshold for an affordable contribution. For that reason, the findings of the previous assessment were deemed to remain valid. Specifically, this included significant positive effects in terms of providing sufficient housing that is affordable (SA03) and helping to tackle poverty and social exclusion (SA04).

CS5 - Affordable Housing in rural areas on “Exception” sites

- H.1.13 There were minor wording changes to this policy; however there was no significant change to the meaning or emphasis of the policy and thus the previous assessment remained valid. Specifically, similar to Policy CS4, significant positive effects were expected in relation to sufficient affordable housing provision (SA03) and help in tackling poverty and social exclusion (SA04).

CS6 – Gypsy and Travellers sites

- H.1.14 Policy CS6 was updated to indicate that the East of England Plan requirement based on the Gypsy and Traveller Accommodation Assessment (2005) would be rolled forward to around 2015, which would involve the allocation of additional eight pitches, in addition to pitch requirements to 2011. In the later period of the Core Strategy, the need for this type of accommodation would be reviewed in line with the government’s future intentions. These changes did not materially affect the previous assessment which indicated that the policy would deliver moderate and minor positive effects across the SA social objectives: SA02 – by ensuring reasonable proximity to key local services; SA03 – by meeting housing need for gypsies and travellers; SA04 – by contributing to social inclusion of the gypsy and traveller community; SA 05 – by preventing illegal behaviour and reducing fear of crime; and SA06 - by ensuring that sites are serviced by appropriate sanitation arrangements.

CS7 - Housing Mix

- H.1.15 Policy CS7 was updated to include reference to minimum floorspace guidance in the Planning and Design Guide SPD. This change did not materially affect the previous assessment which was still valid. This policy set out the proposals for housing in terms of size, type and tenure and in terms of providing an appropriate mix of dwellings to meet these needs. This policy was highly compatible with objectives SA3 (housing) and SA4 (poverty and social exclusion), achieving positive but not significant effects.

CS8 - Scale and distribution of employment land

- H.1.16 This policy was updated to include provision for 110 hectares of designated employment land up to 2026 rather than 100 hectares up to 2021. Requirements for the Elstree Way Employment Area were detailed in the new Policy CS22. These changes did not materially affect the previous assessment which is still valid. Specifically, the policy was expected to deliver moderate positive effects against the SA economic objectives and minor positive effects SA objective 3 (housing), as the policy allowed for the release of existing employment sites for new housing, where appropriate. In terms of the environmental objectives a range of positive and negative but not significant effects were identified due to the potential negative effects of new development on the environment.

CS9 - Local significant employment sites

- H.1.17 This policy was updated to include the list of those sites that were identified as local significant employment sites indicated on the Key Diagram. This change improved clarity of the policy. However, the previous assessment remained valid, as the boundaries of these locations would be clarified in the Site Allocation DPD, which is subject to a separate SA process. This policy was assessed as having significant positive effects on economic objective 20, as it aims to help achieve a balanced stable economy. The policy was also assessed as having a range of minor positive and negative effects on objectives SA2 (accessibility to services), SA11 (reducing reliance on the car and promoting sustainable modes of transport), SA16 (local air quality), and SA17 (reduce greenhouse gases). An opportunity to promote initiatives such as car sharing and green travels plans through employment in order to help decarbonise transport was identified.

CS10 - Land use within employment areas

- H.1.18 There was no change to this policy and thus the previous assessment remains valid. Specifically, the policy was assessed as having minimal or no harm on the environment. Significant positive effects against SA Objective 20 (a prosperous, balanced and stable economy) were predicted, as the policy allowed for flexibility of uses within employment sites and seeks to provide training opportunities.

CS11 - Promoting film and television production in Hertsmere

- H.1.19 Changes to this policy include removal of an action that the Council would seek to make Local Development Order on the principal studio sites; this change does not materially affect the previous assessment which is still valid. Specifically, this policy was assessed as having positive but not significant effects on the economic objectives. It was assessed as having no effects on the social objectives and having minor positive effects on environmental objectives SA16 (air quality) and SA17 (greenhouse gases).

CS12 - Protection and enhancement of the natural environment

- H.1.20 There were minor wording changes to this policy; however there was no significant change to the meaning or emphasis of the policy and thus the previous assessment remained valid. Specifically, this policy was assessed as having significant positive effects on the environmental SA objectives, as it sets out safeguards for the conservation and enhancement of various environmental assets of the Borough. It was also expected to lead to minor positive effects against SA social objective 6 (health), by preserving local amenities and allowing for recreation use, and against SA economic objectives by making the area more attractive for tourism and recreation use and contributing to the enhancement of the viability of town centres. Additionally, effective implementation of this policy should help mitigate negative effects predicted to arise as a result of the implementation of other policies (e.g. those pertaining to housing and employment).

CS13 Protection or enhancement of historic assets

- H.1.21 There were minor wording changes to this policy; however there was no significant change to the meaning or emphasis of the policy and thus the previous assessment remained valid. Specifically, the policy was predicted to have significant positive effects against SA objectives 9 and 10 (historic assets and landscape) by virtue of its nature. Minor positive effects were also expected against SA economic objective 20 (economy) by making the area more attractive for tourism. Additionally, effective implementation of this policy should help mitigate negative effects predicted to arise as a result of the implementation of other policies (e.g. those pertaining to housing and employment).

CS14 - Promoting recreational access to open spaces and the countryside

- H.1.22 There were minor wording changes to this policy; however there is no significant change to the meaning or emphasis of the policy and thus the previous assessment remains valid. Specifically, this policy was assessed as having positive effects on SA objectives 2, 5 and 6 as it seeks to

promote access to recreational and countryside attractions, potentially reducing the fear of crime through increased natural surveillance and improving health. The policy was also expected to result in minor positive effects on the environmental objectives 9 (heritage), 10 (countryside) and 11 (biodiversity).

CS15 - Environmental Impact of development

- H.1.23 This policy was updated to remove a requirement to reduce carbon emissions in new development and a requirement for the Code for Sustainable Homes minimum standards in new residential development (both now included and assessed in Policy CS16). Likewise, the need to support the development of on-site renewable energy generation, where there is no adverse environmental impact on nearby communities, was also moved and assessed as part of Policy CS16. Given that the changes were reassessed as part of Policy CS16 and that these changes did not weaken the overall message and requirements of the Core Strategy, the previous assessment for Policy CS15 remained valid. This assessment indicated that this policy encompassing all environmental considerations for new development was likely to deliver significant beneficial effects against SA environmental objectives.

CS16- Energy and CO₂ Reductions

- H.1.24 This is a new policy that was included in the updated Core Strategy and therefore was subject to a full assessment (see Appendix H). The policy is related to the reduction of energy and CO₂ emissions through the requirement for Code for Sustainable Homes in residential development; CO₂ emissions reductions in non-residential development and promotion of renewable energy generation.
- H.1.25 In terms of social objectives, in many cases there were no effects. A slight beneficial effect was identified against objective 3 (meeting housing needs and improving housing quality and affordability), as residential properties built to the Code for Sustainable Homes levels are likely to be of a good quality, with good thermal insulation, etc, and thus having a beneficial effect. Potential adverse effects of building homes to higher standards on affordability are deemed to be neutralised, as this consideration was factored in, whilst setting the requirements for affordable housing delivery. Slight beneficial effects were also identified against objective 4 (reducing poverty and social exclusion) and objective 6 (improving health), as homes will be built to higher levels of thermal insulation, thus reducing heating costs and helping eliminate fuel poverty; and having beneficial effects on health through reducing cold related illnesses.
- H.1.26 As would be expected from a policy to reduce energy consumption and CO₂ emissions, there were no negative effects identified against the environmental objectives. In many cases there was no obvious effect: Objectives 7 (Efficient use of land), 8 (Land contamination and soil), 9 (Landscape character and archaeology), 11 (Sustainable transport) and 16 (Air quality). Slight positive effects were identified against maintaining and enhancing the quality of the countryside and landscape (Objective 10) due to renewable energy generation schemes having to have regard to the landscape. Moderate or large beneficial effects were identified against the following objectives: 12 (Protecting and enhancing wildlife), 13 (Water quality), 14 (Water consumption), 15 (Flooding), 17 (GHG emissions), 18 (Energy consumption) and 19 (Waste). These positive effects were in many cases related to there being a corresponding credit in the Code for Sustainable Homes, therefore ensuring that this topic will be addressed in new housing development.
- H.1.27 Moderate positive effects were identified against the economic objective 20 (prosperous, and stable economy), as promoting the use of renewable and low carbon energy supports the growth in clean-technology markets, laying the foundation for a stable and prosperous low carbon local economy. Significance of effects would become more prominent in the medium to longer term when the scale of clean energy technology development and utilisation is anticipated to increase.

CS17 - Access to services

- H.1.28 There was no change to this policy (apart from policy numbering) and thus the previous assessment remains valid. It demonstrated that the policy was likely to lead to positive effects on SA1 (the extent to which new provision will comprise educational facilities), SA2 (ensuring fair access to services), SA5 and SA6 (through the provision of new community facilities).

CS18 - Key Community Facilities

- H.1.29 There was no change to this policy (apart from policy numbering) and thus the previous assessment remains valid. This policy was assessed primarily as having minor and significant positive effects against the majority of the social objectives by lending strong support to the provision or dual use of key community facilities.

CS19 - Securing mixed use development

- H.1.30 There were minor wording changes to this policy; however there is no significant change to the meaning or emphasis of the policy and thus the previous assessment remains valid. The assessment of mixed use developments is similar to the assessment of any development and, whilst this policy was assessed as having overall positive but not significant effects on the social and economic objectives, it was assessed as having a mix of negative and positive effects on the environmental objectives.

CS20 – Standard charges and other planning obligations

- H.1.31 There were minor wording changes to this policy; however there is no significant change to the meaning or emphasis of the policy and thus the previous assessment remains valid. As this policy represents a proactive approach to achieving benefits for the community (e.g. the provision of a range of community facilities and infrastructure improvements) and the environment through developer contributions, it was assessed, in general, as having positive effects on SA social, environmental and economic objectives. The effects on the economic objectives were deemed significant.

CS21 - Securing a high quality and accessible environment

- H.1.32 This policy had minor updated wording to include a sentence that development should be planned with the principles of crime prevention and community safety integrated. This addition scored well with regard to SA objective 5 (reduce and prevent crime). However, as the effects predicted previously against this objective were already deemed moderately beneficial, they remained unchanged. The rest of the previous assessment also remained valid. Specifically, the policy was assessed as having significant positive effects against SA Objective 3 (improve the quality of housing). In addition, the emphasis on ensuring that development proposals take advantage of opportunities to improve the character and quality of an area was likely to result in positive effects on objective SA09 (enhance the landscape character, historic buildings, archaeological sites and cultural features).

CS22 - Elstree Way Corridor

- H.1.33 Policy CS22 on Elstree Way Corridor is a new policy that has undergone full assessment (see Appendix H). The policy is concerned with encouraging employment and community use development in the corridor and will seek to allow residential development on appropriate sites and bring forward development in a coordinated manner.
- H.1.34 The policy scored well against social objectives, with positive effects being identified against all social objectives. By facilitating residential development and thus promoting a mixed use site, there will be opportunities for employment (objective 1), access to services (objective 2), housing provision (objective 3), equality of opportunities through improved access and transport linkages (objective 4), reduction of crime through promotion of active frontages (objective 5) and improvements to health through providing active travel opportunities and access to health facilities (objective 6).

H.1.35 There were a range of effects identified against the environmental objectives. Negative effects were identified against objective 12 (Wildlife and habitats) due to new development having the potential to affect biodiversity; objective 13 (Water quality) due to the potential risk of construction activity causing pollution and objective 19 (Waste) as construction activity inevitably generates waste. In contrast, there were positive effects identified against objective 7 (Efficient use of land), as land used will be previously developed; objective 9 (Landscape character and archaeology) due to the policy wanting to avoid a piecemeal approach to development; objective 11 (Sustainable transport) due to the promotion of sustainable modes of transport; objective 15 (Flooding) due to the use of previously developed land; objective 16 (Air quality) linked to the promotion of sustainable transport; objective 17 (GHG emissions) due to a mixed use site requiring less travel and objective 18 (Energy use), as new development will be required to reduce energy use and CO₂ emissions in line with Policy CS16. A mix of minor positive and negative effects was identified against objective 8 (Contamination and soil quality), as in case contaminated sites are present within the Corridor, their redevelopment would require remediation; on the other hand, any construction activities have the potential to introduce pollution to soil in the short term, although this risk can be mitigated.

H.1.36 By promoting employment and a mixture of uses within the corridor, the policy scored well against the economic objectives: providing prosperous economy (objective 20) and sustainability and enhancing the vitality of the town centres, in this case Borehamwood (objective 21).

CS23 - Development and accessibility to services and employment

H.1.37 There were minor wording changes to this policy; however there was no significant change to the meaning or emphasis of the policy and thus the previous assessment remained valid (see below).

CS24 - Accessibility and parking

H.1.38 There were minor wording changes to this policy; however there was no significant change to the meaning or emphasis of the policy and thus the previous assessment remained valid (see below).

CS25 - Promoting alternatives to the car

H.1.39 There were minor wording changes to this policy; however there was no significant change to the meaning or emphasis of the policy and thus the previous assessment remained valid.

H.1.40 The transport and parking policies as a whole (CS23, CS24 and CS25) were assessed as having positive effects on improving accessibility (SA02) and improving health through seeking alternatives to the car (SA06). These policies were assessed as having positive effects on objective SA11 (modal shift) as with reference to travel plans, creation of accessible zones and promoting alternatives to the car, this is highly complementary with this objective. The extent of the positive effects would be dependent on the measures outlined in the review of Hertfordshire's Local Transport Plan and behavioural change.

CS26 - Town Centre Strategy

H.1.41 As well as minor wording changes, this policy was updated to include a requirement for impact assessment of any proposals in excess of 2,500 sq m of new retail floorspace. These changes did not have a significant change to the meaning or emphasis of the policy and thus the previous assessment remained valid (see below).

CS27 - Strengthening Town Centres

H.1.42 The wording of this policy was updated to include that Policy Proposals for rural diversification will be supported, where they do not conflict with other policies, although to protect the role of town centres, further retail development at Battlers Green Farm or further afield at the Willows Farm, will not be sought. This change does not have significant implications from the SA perspective, and thus the previous assessment remains valid (see below).

CS28 - Retail and commercial development in Shenley

- H.1.43 There was no change to this policy (apart from policy numbering) and thus the previous assessment remains valid (see below).

CS29 - Safe and attractive evening economy

- H.1.44 There were minor wording changes to this policy; however there was no significant change to the meaning or emphasis of the policy and thus the previous assessment remained valid.
- H.1.45 The town centres policies as a whole (CS26, CS27, CS28 and CS29) were assessed as achieving positive effects against SA objectives 2 (access to services and facilities) and 5 (crime and fear of crime) and also environmental objectives 16 (air quality) and 17 (greenhouse gases) through the creation of accessible zones (in combination with the transport policies) and by seeking to reduce anti-social behaviour. Significant positive effects were assessed against the economic objectives as these policies strongly support the development of diverse town centres.

Table H.1 - Update to Core Strategy Policies (November 2010)

Core Strategy Policies - December 2008	Core Strategy Policies – November 2010 Additions are shown as red text Deletions are shown as strikethrough text
<p>Policy SP1 -Creating Sustainable Development</p> <p>The Council will work with Hertfordshire County Council, Hertfordshire Constabulary, West Hertfordshire Primary Care Trust, Registered Social Landlords and other key local stakeholders to enable development in the Borough to make a sustainable contribution to delivering the Core Strategy Spatial Vision and Strategy. Accordingly new development will be required to prioritise the efficient use of brownfield land in delivering the land use requirements of the private sector, local service providers and the different needs of the hierarchy of settlements across the Borough. There will be a focus on prioritising development in Borehamwood and Potters Bar and within the boundary of existing built up areas but all urban settlements will be expected to accommodate opportunities which arise for meeting local housing, jobs growth and other developments and service needs. All development across the Borough should:</p> <ul style="list-style-type: none"> i) ensure a safe, accessible and healthy living environment for residents and other users of a development; ii) seek to mitigate the environmental impact of transport by promoting alternatives to the car and opportunities for linked trips; iii) be constructed and operated using a minimum amount of non-renewable resources and be required to use energy efficiently; iv) be of high quality design and appropriate in scale, appearance and function to the local context and settlement hierarchy, taking advantage of opportunities to improve the character and quality of an area v) avoid prejudicing, either individually or cumulatively, characteristics and features of the natural and built environment; vi) minimise and mitigate the impact on local infrastructure and services; and vii) comply with the key environmental policies set out in the Core Strategy 	<p>Policy SP1 - Creating Sustainable Development</p> <p>The Council will work with Hertfordshire County Council, Hertfordshire Constabulary, West NHS Hertfordshire Primary Care Trust, Registered Social Landlords and other key local stakeholders to enable development in the Borough to make a sustainable contribution to delivering the Core Strategy Spatial Vision and Strategy. Accordingly new development will be required to prioritise the efficient use of brownfield land in delivering the land use requirements of the private sector, local service providers and the different needs of the hierarchy of settlements across the Borough. There will be a focus on prioritising development opportunities in Borehamwood and Potters Bar and within the boundary of but all existing built up areas within but all urban settlements will be expected to accommodate opportunities which arise for meeting local housing, jobs growth and other development and service needs.</p> <p>All development across the Borough should:</p> <ul style="list-style-type: none"> (i) ensure a safe, accessible and healthy living environment for residents and other users of a development; (ii) seek to mitigate the environmental impact of transport by promoting alternatives to the car and opportunities for linked trips; (iii) be constructed and operated using a minimum amount of non-renewable resources and be required to use energy efficiently; (iv) be of high quality design and appropriate in scale, appearance and function to the local context and settlement hierarchy, taking advantage of opportunities to improve the character and quality of an area; (v) avoid prejudicing, either individually or cumulatively, characteristics and features of the natural and built environment; (vi) minimise and mitigate the impact on local infrastructure and services; and (vii) Comply with the key environmental policies set out in the Core Strategy;
CS1 -The location and supply of new homes	CS1 -The location and supply of new homes

Core Strategy Policies - December 2008	Core Strategy Policies – November 2010 Additions are shown as red text Deletions are shown as strikethrough text
<p>The Council will make provision for the supply of at least 5,000 new homes between 2001 and 2021 in accordance with in the requirements of the East of England Plan (RSS14) with a focus on development within the three Strategic Housing Locations of Borehamwood, Potters Bar and Bushey. In providing for the new homes and identifying new locations for development in the Site Allocations DPD, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints and compliance with the key environmental policies set out in the Core Strategy (including Policies CS11, CS12, CS14 and CS15); ii) the density of the surrounding area; iii) the need to retain existing housing; iv) the need to locate new development in the most accessible locations taking account of local infrastructure capacity; v) the settlement hierarchy identified in the Hertsmere Core Strategy; and vi) the need to focus development within the boundaries of existing built-up areas. <p>Unless there are exceptional circumstances, no more than 50% of new housing will be sought in Borehamwood, up to 30% in Potters Bar, up to 30% in Bushey and up to 15% in Radlett and other suitable locations. Development proposals should ensure that any adverse effects on the built and natural environment are avoided and / or mitigated. Windfall developments will be supported on appropriate sites in all towns, subject to the environmental constraints and requirements of Policies SP1, CS12, 14, 15 and other relevant planning policies.</p>	<p>The Council will make provision for the supply of at least 5,000 new homes 3,200 additional dwellings within the District between 2011 and 2026, a development rate of 213 dwellings per year. in accordance with in the requirements of the East of England Plan (RSS14) with a focus on development within the three Strategic Housing Locations of Borehamwood, Potters Bar and Bushey.</p> <p>In providing for the new homes and identifying new locations for development in the Site Allocations DPD, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints and compliance with the key environmental policies set out in the Core Strategy (including Policies CS11, CS12, CS14 and CS15); ii) the character, pattern and density of the surrounding area; iii) the need to retain existing housing; iv) the need to locate new development in the most accessible locations taking account of local infrastructure capacity; v) the settlement hierarchy identified in the Hertsmere Core Strategy; and vi) the need to focus development within the boundaries of existing built-up areas. <p>Unless there are exceptional circumstances, no more than 50% of new housing will be sought in Borehamwood, up to 30% in Potters Bar, up to 30% in Bushey and up to 15% in Radlett and other suitable locations. Development proposals should ensure that any adverse effects on the built and natural environment are avoided and / or mitigated. Windfall developments will be supported on appropriate sites in all towns, subject to the environmental constraints and requirements of Policies SP1, CS12, 14, 15 and other relevant planning policies.</p>
<p>CS2 - Housing beyond existing built up areas</p> <p>Changes to the boundaries to the existing built up areas to accommodate up to 460 new homes will be focused on sites to be identified through the Site Allocations DPD, broad locations for which are shown on the Key Diagram to the south and east of Borehamwood and to the south, west and north-west of Potters Bar. The identification of individual sites will be based on a range of criteria including (but not restricted to):</p> <ul style="list-style-type: none"> i) Air quality; ii) Noise; iii) Transport impact; iv) Flood risk; v) Nature conservation value and impact; vi) Landscape conservation value and impact vii) Agricultural land quality; and viii) Accessibility to and capacity of public transport and essential services ix) The extent of previously developed land on the site 	<p>CS2 – The location of new homes</p> <p>Priority will be given to locating major residential development within the main settlements of Borehamwood, Potters Bar and Bushey. Between 2011 – 2026, 60% of new housing will be sought in Borehamwood, up to 15% in Potters Bar, up to 25% in Bushey and up to 10% in Radlett and other suitable locations.</p> <p>Windfall developments will be supported on appropriate sites in all towns , subject to local environmental constraints, the relationship with the surrounding pattern of development and the requirements of Policies SP1, CS12, 14, 15 and other relevant planning policies.</p> <p>Housing beyond existing built up areas</p> <p>Changes to the boundaries to the existing built up areas to accommodate up to 460 new homes will be focused on sites to be identified through the Site Allocations DPD, broad locations for which are shown on the Key Diagram to the south and east of Borehamwood and to the south, west and north-west of Potters Bar. The identification of</p>

Core Strategy Policies - December 2008	Core Strategy Policies – November 2010 Additions are shown as red text Deletions are shown as strikethrough text
	<p>individual sites will be based on a range of criteria including (but not restricted to):</p> <ul style="list-style-type: none"> i) Air quality; ii) Noise; iii) Transport impact; iv) Flood risk; v) Nature conservation value and impact; vi) Landscape conservation value and impact vii) Agricultural land quality; and viii) Accessibility to and capacity of public transport and essential services
<p>CS3 – Phasing of New Development</p> <p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policies CS1 and CS2, the Council will permit phased levels of new housing development, measured from the start of the plan period in 2001:</p> <ul style="list-style-type: none"> Phase 1: Up to 57% of new homes by March 2011 Phase 2: Up to 74% of new homes by March 2016 Phase 3: Up to 100% of new homes by March 2021 <p>Housing sites will be phased for periods up to March 2011, March 2016 and March 2021 through the Site Allocations DPD, to facilitate the required levels of housebuilding sought in the East of England Plan. Based on the findings of Annual Monitoring Reports, allocated land in later phases will be brought forward, if necessary, to maintain the five year supply of land for housing. New housing between 2021 and 2024 will be permitted on unallocated sites at the same rate as housing delivered between 2001 and 2021.</p> <p>Sufficient Greenfield sites should be identified in the Site Allocations DPD to enable the provision of land for new homes in Phase 3, if required.</p> <p>To prevent the overdevelopment of housing in the Borough ahead of required infrastructure and community facilities, unimplemented residential land allocations and new residential proposals of 50 units (net) or more will not be permitted where the number of projected completions, as detailed in Annual Monitoring Report housing trajectory, is forecast to exceed either</p> <ul style="list-style-type: none"> 20% of the proportion sought in each phase over the following three years; or the East of England Plan target of 5,000 before 2021 <p>Where housing delivery is projected to fall below the proportion sought in each phase by at least 20% over the following three years, a review of the phasing of housing allocations will be undertaken.</p>	<p>CS3 – Phasing of New Development</p> <p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policies CS1 and CS2, Housing sites will be phased in five year periods from 2011. Based on the findings of Annual Monitoring Reports, allocated land in later phases will be brought forward, if necessary, to maintain the five year supply of land for housing.</p> <p>the Council will permit phased levels of new housing development, measured from the start of the plan period in 2001:</p> <ul style="list-style-type: none"> Phase 1: Up to 57% of new homes by March 2011 Phase 2: Up to 74% of new homes by March 2016 Phase 3: Up to 100% of new homes by March 2021 <p>Housing sites will be phased for periods up to March 2011, March 2016 and March 2021 through the Site Allocations DPD, to facilitate the required levels of housebuilding sought in the East of England Plan. Based on the findings of Annual Monitoring Reports, allocated land in later phases will be brought forward, if necessary, to maintain the five year supply of land for housing. Core Strategy Policies - December 2008	Core Strategy Policies – November 2010 Additions are shown as red text Deletions are shown as strikethrough text
<p>CS4 - Affordable Housing</p> <p>In order to optimise increase the supply of Affordable Housing, developments involving more than 15 residential units (gross), or residential sites of more than 0.5 hectares, should make provision for an element of Affordable Housing.</p> <p>The Council will seek the provision of 35% Affordable Housing on qualifying sites, pending the finalisation of Affordable Housing requirements in the East of England Plan, equating to an overall Affordable Housing target of 1,315 homes (out of an overall government housing target of 5,000 homes).</p> <p>On sites requiring the provision of Affordable Housing and subject to other relevant DPD / Local Plan policies, the Council will seek to maximise the provision of affordable, rented accommodation managed delivered through a Registered Social Landlord unless otherwise agreed with the Council's Housing Department. The Affordable Housing tenure mix will be considered on a site-by-site basis with recognising that approximately 75% of all new Affordable Housing in the Borough should be delivered as social rented housing and the remainder as intermediate housing.</p>	<p>of housing allocations will be undertaken.</p> <p>CS4 - Affordable Housing</p> <p>In order To optimise increase the supply of Affordable Housing, developments involving more than of 105 residential units or more (gross), or residential sites of more than 0.35 hectares, should make provision for an element of Affordable Housing.</p> <p>On qualifying sites, 35% of the housing units should be affordable, equating to an affordable housing target of 975 homes from 2011 to 2026.</p> <p>The Council will seek the maximum level of Affordable Housing on site. A lower level of provision will not be acceptable unless the Council agrees that its Affordable Housing objectives are being met.</p> <p>As a guideline, the council expect that 75% of the Affordable Housing units will be delivered as social rented housing and the remainder as intermediate housing. The precise tenure and dwelling mix will be agreed with the Council on a site by site basis and reflect current housing needs or updated supplementary guidance.</p> <p>The Council will seek the provision of 35% Affordable Housing on qualifying sites, pending the finalisation of Affordable Housing requirements in the East of England Plan, equating to an overall Affordable Housing target of 1,315 homes (out of an overall government housing target of 5,000 homes).</p> <p>On sites requiring the provision of Affordable Housing and subject to other relevant DPD / Local Plan policies, the Council will seek to maximise the provision of affordable, rented accommodation managed delivered through a Registered Social Landlord unless otherwise agreed with the Council's Housing Department. The Affordable Housing tenure mix will be considered on a site-by-site basis with recognising that approximately 75% of all new Affordable Housing in the Borough should be delivered as social rented housing and the remainder as intermediate housing.</p>
<p>CS5 - Affordable Housing in rural exception sites</p> <p>The inclusion of small scale Affordable Housing schemes, as an exception to normal policies, will be permitted in designated "smaller" settlements in the Green Belt, as set out on the Core Strategy Key Diagram. "Exception" sites should be small in scale in relation to the size of settlements and such schemes should meet the identified needs of people local to the village or settlement, remain affordable in perpetuity and be managed by a Registered Social Landlord. Priority will be given to sites located on previously developed land within settlements and the scale of development should not exceed the level of need identified or have adverse effects on the natural and built environment.</p>	<p>CS5 - Affordable Housing in rural areas on "eException" sites</p> <p>The inclusion of small scale Affordable Housing schemes, as an exception to normal policies, will be permitted in designated "smaller" settlements in the Green Belt, as set out on the Core Strategy Key Diagram. <p>and facilities.</p> <p>CS19 - Planning tariff and obligations</p> <p>Provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, in addition to contributions towards off-site Affordable Housing, will be secured through:</p> <ul style="list-style-type: none"> (i) the use of individually negotiated planning obligations and subsequently any standard charge on the approval of each new home, on sites of fewer than 15 units (gross), to be secured through a planning obligation under Section 106 of the Town and County Planning Act; and (ii) the use of individually negotiated planning obligations entered into by the Council under Section 106 of the Town and County Planning Act, on sites of 15 or more units (gross). <p>The standard charge will be set at a suitable level to ensure that the development of new housing does not adversely affect existing key community facilities and services, having regard to the viability of developing land in the Borough.</p> <p>The provision of Affordable Housing, together with on and off-site facilities, training, services and improvements necessitated by new commercial development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>Specific details on arrangements for securing developer contributions will be set out in the Planning Obligations Supplementary Planning Document.</p>	<p>and facilities.</p> <p>CS2019 – Standard charges and other pPlanning tariff and obligations</p> <p>Provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, in addition to obligations contributions towards off-site Affordable Housing, will be secured through:</p> <ul style="list-style-type: none"> (i) the use of individually negotiated planning obligations and / or subsequently any standard charge(s) on the approval of each new home on smaller sites, typically on sites of fewer than 15 units (gross), to be secured through a planning obligation under Section 106 of the Town and County Planning Act; and (ii) the use of individually negotiated planning obligations entered into by the Council under Section 106 of the Town and County Planning Act, on sites of 15 or more units (gross). <p>The standard Local and Strategic standard charges will be set at a suitable level to ensure that the development of new housing does not adversely affect existing key community facilities and services, having regard to the viability of developing land in the Borough.</p> <p>The provision of Affordable Housing, together with on and off-site facilities, training, services and improvements necessitated by new commercial development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>Specific details on arrangements for securing developer contributions for strategic and local infrastructure through a standard charge will be set out in the Planning Obligations Supplementary Planning Document a separate Local Development Document.</p>
<p>CS20 - Securing a high quality and accessible environment</p> <p>The Council will require all development to be of high quality design which ensures the creation of attractive and usable places. Development proposals should take advantage of opportunities to improve the character and quality of an area and the Council will take account of the cumulative impact of new development, including the impact arising from residential intensification and redevelopment. All new development should be designed to ensure that buildings and land within their curtilage are fully accessible to groups with special mobility requirements. Where practicably possible 100% of new residential units should be built to the Lifetime Homes Standards based on the Joseph Rowntree Foundation standards highlighted in the Council's Planning and Design Guide Supplementary Planning Document. The proportion of wheelchair accessible homes on new residential redevelopments of 15 or more units will be considered on a site by site basis, having regard to current needs in the Borough.</p>	<p>CS210 - Securing a high quality and accessible environment</p> <p>The Council will require all development to be of high quality design which ensures the creation of attractive and usable places. Development proposals should take advantage of opportunities to improve the character and quality of an area and the Council will take account of the cumulative impact of new development, including the impact arising from residential intensification and redevelopment. Development should be planned with the principles of crime prevention and community safety integrated. All new development should be designed to ensure that buildings and land within their curtilage are fully accessible to groups with special mobility requirements. Where practicably possible 100% of new residential units should be built to the Lifetime Homes Standards based on the Joseph Rowntree Foundation standards highlighted in the Council's Planning and Design Guide Supplementary Planning Document. The proportion of wheelchair accessible homes on new residential redevelopments of 15 or more units will be considered on a site by site basis, having regard to current needs in the Borough.</p>

Core Strategy Policies - December 2008	Core Strategy Policies – November 2010 Additions are shown as red text Deletions are shown as strikethrough text
	<p>Policy CS22 Elstree Way Corridor</p> <p>Within the Elstree Way Corridor the continued development and refurbishment of Employment, Civic and Community uses will be actively encouraged. Residential development on appropriate sites will accepted, in accordance the Elstree Way SPG and any subsequent guidance or agreed masterplan.</p> <p>Development should be brought forward in a coordinated manner and proposals likely to result in a piecemeal or fragmented redevelopment of the corridor will be refused. Development should also provide active frontages to Elstree Way where possible to promote the identity of the corridor as a civic and commercial gateway to the borough and to ensure an appropriate demarcation of residential and non-residential uses within this part of the town.</p>
<p>CS21 - Development and accessibility to services and employment</p> <p>The Council will work towards Hertfordshire County Council's vision of providing a safe, efficient and affordable transport system that allows access for all to everyday facilities. To obtain the best use of the existing highway network, major commercial trip generating development should be focused principally on Transport Development Areas, Transport Corridors and town centres, as indicated on the Key Map. All major developments over 2,500 sq m or 25 residential units will only be permitted where:</p> <ul style="list-style-type: none"> i) it does not conflict with the Transport Objectives of the Hertfordshire Local Transport Plan (2006 – 2011) and associated Accessibility Strategy; ii) it is accompanied by a suitable Travel Plan, prepared in accordance with guidance set out in the Parking Supplementary Planning Document; iii) it is in accordance with Hertfordshire County Council guidance and relevant Local Plan / Development Plan Document policies relating to the operation of the Highways network and the achievement of vehicular, and pedestrian and equestrian safety; and iv) it contributes, where required, to the provision or funding of new or improved public transport and non-motorised pedestrian and cycle routes. 	<p>CS2423 - Development and accessibility to services and employment</p> <p>The Council will work towards Hertfordshire County Council's vision of providing a safe, efficient and affordable transport system that allows access for all to everyday facilities.</p> <p>To obtain the best use of the existing highway network, major commercial trip generating development should be focused principally on Transport Development Areas, Transport Corridors and town centres, as indicated on the Key Map. All major non-residential developments over 2,500 sq m or schemes of 25 residential units will only be permitted where:</p> <ul style="list-style-type: none"> i) it does not conflict with the Transport Objectives of the Hertfordshire Local Transport Plan (2006 – 2011) and associated Accessibility Strategy; ii) it is accompanied by a suitable Travel Plan (for developments over 2500 sq m or 100 residential units), prepared in accordance with guidance set out in the Parking Supplementary Planning Document; iii) it is in accordance with Hertfordshire County Council guidance and relevant Local Plan / Development Plan Document policies relating to the operation of the Highways network and the achievement of vehicular, and pedestrian and equestrian safety; and iv) it contributes, where required, to the provision or funding of new or improved public transport and non-motorised pedestrian and cycle routes.
<p>CS22 - Accessibility and parking</p> <p>In order to facilitate fair access to local services, the quantity of off-street parking for all modes of transport, to be provided at new developments, will be based on an assessment of:</p> <ul style="list-style-type: none"> i) a site's location; ii) local car ownership; iii) the proposed land use (having regard to Table 18 for residential development); iv) housing tenure v) the potential for shared parking, over various times of the day and week, with other uses 	<p>CS2224 - Accessibility and parking</p> <p>In order to facilitate fair and convenient access to local services, the quantity of off-street parking for all modes of transport, to be provided at new developments, will be based on an assessment of:</p> <ul style="list-style-type: none"> i) a site's location; ii) local car ownership; iii) the proposed land use (having regard to Table 48 17 for residential development); iv) housing tenure v) the potential for shared parking, over various times of

<p>vi) local on-street parking conditions and controls;</p> <p>vii) highway and pedestrian safety considerations;</p> <p>viii) incentives to reduce dependency on the car and the provisions of any Travel Plan submitted;</p> <p>ix) the Accessibility Zones for the Borough; together with the extent of compliance with requirements set out in the Parking Supplementary Planning Document; and</p> <p>x) the extent to which permeable and semi-permeable surfaces are incorporated into the area of off-street parking to be provided</p>	<p>the day and week, with other uses</p> <p>vi) local on-street parking conditions and controls, including those likely to be available within the new development;</p> <p>vii) highway and pedestrian safety considerations; including whether roads have been designed to an adoptable standard;</p> <p>viii) incentives to reduce dependency on the car and the provisions of any Travel Plan submitted;</p> <p>ix) the Accessibility Zones for the Borough; together with the extent of compliance with requirements set out in the Parking Supplementary Planning Document; and</p> <p>x) the extent to which permeable and semi-permeable surfaces are incorporated into the area of off-street parking to be provided.</p>
<p>CS23 - Promoting alternatives to the car</p> <p>The Council will support a wide range of measures to provide safer and more reliable alternatives to the car for accessing new development and existing development and other destinations across the Borough including:</p> <p>i) improved public transport facilities;</p> <p>ii) additional public transport routes and stops;</p> <p>iii) enhanced and new non-motorised links within and between urban and rural areas, along or additional to the existing rights of way and highways network, which increase walking, cycling or riding opportunities; and;</p> <p>iv) The safeguarding of proposed non-motorised routes, where necessary, to prevent development occurring which would prevent their future implementation.</p> <p>New developments will be assessed in terms of their accessibility by a range of transport modes and where appropriate, measures to promote alternatives to the car will need to be provided as part of a proposed scheme, having regard to the requirements of the Parking Supplementary Planning Document.</p>	<p>CS23²⁵ - Promoting alternatives to the car</p> <p>The Council will support a wide range of measures to provide safer and more reliable alternatives to the car for accessing new development and existing development and other destinations across the Borough including:</p> <p>i) improved public transport facilities;</p> <p>ii) additional public transport routes and stops;</p> <p>iii) enhanced and new non-motorised links within and between urban and rural areas, along or additional to the existing rights of way and highways network, which increase walking, cycling or riding opportunities; and;</p> <p>iv) The safeguarding of proposed non-motorised routes, where necessary, to prevent preclude development occurring which would prevent their future implementation.</p> <p>New developments will be assessed in terms of their accessibility by a range of transport modes and where appropriate, measures to promote alternatives to the car will need to be provided as part of a proposed scheme, having regard to the requirements of the Parking Supplementary Planning Document.</p>
<p>CS24 - Town Centre Strategy</p> <p>Development within the designated town, district or neighbourhood centres of Borehamwood, Potters Bar, Bushey and Radlett will be permitted provided that it maintains their primary retail function and wider role as a focus for business, leisure, cultural and other appropriate town centre uses. Retail activity elsewhere will be focused on local centres and parades which will be expected to retain a core of local shopping facilities and accommodate any new retail development, commensurate to their position within the town centre hierarchy. Proposals to create in excess of 2,500 sq m of new retail floorspace will be subject to the sequential test and should be focused on Borehamwood and Darkes Lane, Potters Bar town centres and will only be permitted where a clear quantitative need has been established and where it can be demonstrated that it would not harm any existing shopping centre.</p>	<p>CS24²⁶ - Town Centre Strategy</p> <p>Development within the designated town, district or neighbourhood centres of Borehamwood, Potters Bar, Bushey and Radlett will be permitted provided that it maintains their primary retail function and wider role as a focus for business, leisure, cultural and other appropriate town centre uses (as defined within PPS4). Retail activity elsewhere will should be focused within on local centres and parades which will be expected to retain a core of local shopping facilities and accommodate any new retail development, commensurate to their position within the town centre hierarchy. Proposals to create in excess of 2,500 sq m of new retail floorspace that is outside of an existing town centre will be subject to the sequential test. Proposals to create in excess of 2500 sq m of new retail floorspace will be subject to the (significant adverse) impact assessment to enable the impact on existing shopping centres to be considered. and should be focused on Borehamwood and Darkes Lane,</p>

Core Strategy Policies - December 2008	Core Strategy Policies – November 2010 Additions are shown as red text Deletions are shown as strikethrough text
	Potters Bar town centres and will only be permitted where a clear quantitative need has been established and where it can be demonstrated that it would not harm any existing shopping centre.
<p>CS25 - Strengthening Town Centres</p> <p>The retail function and vitality of designated centres will be reinforced through the designation of primary and secondary shopping frontages in Borehamwood, Potters Bar, Bushey and Radlett. There will be a focus on (A1) retail uses within the primary frontages and scope for a wider range of activities in secondary frontages, with an emphasis on a mix of (A1) retail, (A2) financial and professional services and (A3) dining-in establishments. An appropriate proportion of other uses will also be permitted in secondary frontages, including (A4) pubs and bars and (A5) take away uses, together with other appropriate arts, leisure and entertainment uses. Details of frontages and uses will be set out in the Site Allocations DPD.</p>	<p>CS25-27 - Strengthening Town Centres</p> <p>The retail function and vitality of designated centres will be reinforced through the designation of primary and secondary shopping frontages in Borehamwood, Potters Bar, Bushey and Radlett. There will be a focus on (A1) retail uses within the primary frontages and scope for a wider range of activities in secondary frontages, with an emphasis on a mix of (A1) retail, (A2) financial and professional services and (A3) dining-in establishments. An appropriate proportion of other uses will also be permitted in secondary frontages, including (A4) pubs and bars and (A5) take away uses, together with other appropriate arts, leisure and entertainment uses. Details of frontages and uses will be set out in the Site Allocations DPD. Policy Proposals for rural diversification will be supported where they do not conflict with other policies although to protect the role of town centres, further retail development at Battlers Green Farm or further afield at the Willows Farm, will not be sought.</p>
<p>CS26 - Retail and commercial development in Shenley</p> <p>Small scale retail and commercial development in Shenley should be restricted to suitable sites within existing commercial areas. Locations will be identified in the Site Allocations DPD, based on those defined in the Shenley Parish Plan:</p> <ul style="list-style-type: none"> • along London Road in the south east of the village; and • at Andrew Close and the nearby junction between London Road and Porters Park Drive (excluding the reserve school site). <p>Retail and commercial development in identified locations in Shenley should be of a size and scale which primarily serves the local community rather than drawing in large numbers of visitors from further afield.</p>	<p>CS2628 - Retail and commercial development in Shenley</p> <p>Small scale retail and commercial development in Shenley should be restricted to suitable sites within existing commercial areas. Locations will be identified in the Site Allocations DPD, based on those defined in the Shenley Parish Plan:</p> <ul style="list-style-type: none"> • along London Road in the south east of the village; and • at Andrew Close and the nearby junction between London Road and Porters Park Drive (excluding the reserve school site). <p>Retail and commercial development in identified locations in Shenley should be of a size and scale which primarily serves the local community rather than drawing in large numbers of visitors from further afield.</p>
<p>CS27 - Safe and attractive evening economy</p> <p>The Council wishes to promote a range of uses in town centres for the whole community, creating a balanced evening economy including entertainment and late night retailing as well as eating and drinking establishments. The quantity, type and location of A3, A4, A5 and other evening or late night uses will be controlled, having regard to other Local Plan and Development Plan Document policies, together with the aims and objectives of the Crime, Disorder and Drugs Reduction Strategy for Hertsmere, including the need to reduce anti-social behaviour, crime and the fear of crime.</p> <p>Where new A3, A4 and A5 uses are permitted, financial contributions will be sought for related town centre improvements including additional CCTV, improved lighting and improved signage for CCTV and Alcohol Free Zones. a presumption against further consents for such uses.	uses have caused existing anti-social problems, there will be a presumption against further consents for such uses.

Table H.2 - Assessment of Policy CS16: Energy and CO₂ Reductions

Policy CS16: Energy and CO₂ Reductions	<p>All new residential developments will be required to achieve the following levels of the Code for Sustainable Homes (Code) as a minimum as and when successive updates to Part L of the Building Regulations become mandatory:</p> <ul style="list-style-type: none"> • 2010 – Code level 3 • 2013 - Code level 4 once updates to Part L come into effect. • 2016 - Code level 6 once updates to Part L and the national Zero Carbon Homes policy come into effect. <p>All new non-domestic will be expected as a minimum to achieve CO₂ emissions reductions in-line with the Building Regulations Part L. This requirement will not come into effect until successive updates to Part L of the Building Regulations become mandatory:</p> <ul style="list-style-type: none"> • 2010 – 25% reduction in the Building Emission Rate compared to the Target Emission Rate defined by the Building Regulations • 2013 – 44% reduction in the Building Emission Rate compared to the Target Emission Rate defined by the Building Regulations (reductions above 70% can be delivered using allowable solutions). • 2019 Zero Carbon – no additional requirement. <p>The Council will further encourage all new development or major refurbishment to incorporate energy from decentralised and renewable or low carbon sources. All large scale development will be required to incorporate on-site renewable energy generation, unless it is not feasible or viable or alternative decentralised and renewable, low carbon sources can be identified. The Council will also permit new development of sources of renewable energy generation subject to:</p> <ul style="list-style-type: none"> • local designated environmental assets and constraints, important landscape features and significant local biodiversity; • minimising any detriment to the amenity of neighbouring residents and land uses; and • meeting high standards of sustainable design and construction
--	---

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative							
SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effect.	0	0	0	n/a	n/a
2	To ensure ready access to essential services and facilities for all residents	No obvious effect.	0	0	0	n/a	n/a
3	To meet identified housing needs and improve the quality and affordability of housing	Residential properties built to Code for Sustainable Homes levels are likely to be of a good quality, with good thermal insulation etc. thus having a beneficial effect. Building homes to higher standards may have an adverse effect on affordability; however, potential future cost of sustainable building was factored in, whilst setting the requirements for affordable housing delivery. Therefore the	0	+	+	None identified.	n/a

		overall effects are slightly beneficial.					
4	To reduce poverty and social exclusion and promote equality of opportunities	This policy will not affect access to facilities. It may have a slight positive effect on reducing poverty as homes built to CSH will have high levels of thermal insulation and thus reduce heating costs and help eliminate fuel poverty.	+	+	+	None identified.	n/a
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effect.	0	0	0	n/a	n/a
6	To improve population's health and reduce inequalities both geographically and demographically	Homes built to Code for Sustainable Homes levels will be of a good quality with high levels of thermal insulation (reducing damp and cold related problems) and thus have a positive effect on health.	+	+	+	None identified.	n/a
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	No obvious effect.	0	0	0	n/a	n/a
8	To reduce contamination and safeguard soil quality and quantity	No obvious effect.	0	0	0	n/a	n/a
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effect.	0	0	0	n/a	n/a
10	To maintain and enhance the quality of countryside and landscape	The introduction of Code requirements and CO ₂ reductions in non domestic is unlikely to have any effect on this objective. However, in terms of renewable energy generation, it is stated that important landscape features will be protected and thus this policy is likely to have a slight beneficial effect against this objective.	+	+	+	None identified.	n/a
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	The Code does not cover transport, therefore no obvious effect.	0	0	0	n/a	n/a
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	The Code has credits relating to ecology and thus will have a beneficial effect against this objective. Any renewable energy generation will also be subject to local biodiversity constraints and thus also have a beneficial effect.	++	++	++	The policy wording states that renewable energy generation will be subject to "significant local biodiversity". It should also make reference to protection of internally and nationally designated sites.	n/a

13	To improve the quality of surface and ground waters	The Code has credits relating to Surface Run-off and therefore this policy is likely to have a beneficial effect against this objective. The non-domestic CO ₂ reduction and renewable energy generation included within this policy are unlikely to have any effect.	+	++	++	None identified.	n/a
14	To minimise water consumption	The Code has credits relating to reducing water consumption therefore this policy is likely to have a beneficial effect on reducing water consumption from residential properties. The non-domestic CO ₂ reduction and renewable energy generation included within this policy are unlikely to have any effect.	+	++	++	None identified.	n/a
15	To minimise the risk of flooding taking account of climate change	The credits in the Code relating to Surface Run-off award for credits for being located in an area of low flood risk; the policy therefore will have a beneficial effect on reducing floodrisk for residential properties. The non-domestic CO ₂ reduction and renewable energy generation included within this policy are unlikely to have any effect.	+	++	++	None identified.	n/a
16	To improve local air quality	Air quality is largely related to emissions from local traffic; this policy has no obvious effect.	0	0	0	None identified.	n/a
17	To reduce greenhouse gas emissions	Through requiring Code level on all new residential property, CO ₂ emissions will be reduced from the residential sector; with zero carbon homes by 2016. New non-domestic buildings will reduce their emissions; with zero carbon 2019. By permitting new development of sources of renewable energy generation there will be a further beneficial effect against this objective.	++	+++	+++	None identified.	n/a
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	Through requiring Code level on all new residential property, energy efficiency will be increased in the residential sector. New non-domestic buildings will also become more efficient. By permitting new development of sources of renewable energy generation there will be a further	++	+++	+++	None identified.	n/a

		beneficial effect against this objective.					
19	To reduce the generation of waste and encourage re-use and recycling of waste	The Code awards credits for reducing both domestic and construction waste, thus having a beneficial effect against this objective. The policy on reducing CO ₂ emissions in non domestic buildings has no obvious effect against this objective. All new renewable energy generation will have to meet high standards of sustainable design and construction and thus would minimise waste.	+	++	++	None identified.	n/a
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Promoting the use of renewable and low carbon energy supports the growth in clean-technology markets, laying the foundation for a stable and prosperous low carbon local economy. The significance of effects will become more noticeable in the medium to longer term when the scale of clean energy technology development and utilisation is anticipated to increase.	+	++	++	n/a	n/a
21	To sustain and enhance the viability and vitality of town centres	No obvious effect.	0	0	0	n/a	n/a

Table H.3 - Assessment of Policy CS22 Elstree Way Corridor

Policy CS22 Elstree Way Corridor	<p>Within the Elstree Way Corridor the continued development and refurbishment of Employment, Civic and Community uses will be actively encouraged. Residential development on appropriate sites will accepted, in accordance the Elstree Way SPG and any subsequent guidance or agreed masterplan.</p> <p>Development should be brought forward in a coordinated manner and proposals likely to result in a piecemeal or fragmented redevelopment of the corridor will be refused. Development should also provide active frontages to Elstree Way where possible to promote the identity of the corridor as a civic and commercial gateway to the borough and to ensure an appropriate demarcation of residential and non-residential uses within this part of the town.</p>
---	--

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative							
SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	The Elstree Way Corridor will actively encourage Employment, Civic and Community uses which could include educational facilities or community	0	0	+	None identified.	n/a

		training. However, this is not guaranteed through implementation of the policy and therefore over the short and medium term there is likely to be no effect, with a slight beneficial effect over the longer term.					
2	To ensure ready access to essential services and facilities for all residents	The Elstree Way Corridor continued development will include aspects of both residential and essential services (there are health facilities in the corridor for example). As part of the redevelopment, public transport and walking and cycling links to the site will be improved, thus improving access to these facilities and having a beneficial effect against this objective.	+	+	++	None identified.	n/a
3	To meet identified housing needs and improve the quality and affordability of housing	The policy allows for residential development on appropriate sites in the Corridor, thus increasing the availability of housing in the area.	+	+	++	None identified.	n/a
4	To reduce poverty and social exclusion and promote equality of opportunities	The redevelopment of the Elstree Way corridor will allow for increased access to essential facilities such as health facilities through improving transport linkages in the area, and improving services.	+	++	++	Although the Elstree Way SPG states that public transport and walking and cycling will be encouraged in the area, this is not explicitly stated in the Policy. The Policy should be updated to make this clear.	n/a
5	To reduce and prevent crime, fear of crime and anti social behaviour	The promotion of active frontages in Elstree Way will allow for the fear of crime to be reduced through providing an open, safe environment.	+	+	++	The corridor should be developed in line with Secured by Design principles http://www.securedbydesign.com/	n/a
6	To improve population's health and reduce inequalities both geographically and demographically	The Elstree Way corridor includes health facilities. Redevelopment of the corridor and an improvement of public transport and walking and cycling links (as per the Elstree way SPD) will improve access to health facilities as well as directly improving health through active travel.	+	++	++	None identified.	n/a
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The Elstree Way corridor is utilising previously developed land rather than developing on Greenfield land and thus has a beneficial effect against this objective.	+++	+++	+++	None identified.	n/a
8	To reduce contamination and safeguard soil quality and quantity	If the sites within the corridor identified for development are contaminated, remediation would need to be undertaken prior to their development, which would	+/-	0	0	Ensure that best practice pollution control measures are used during construction.	n/a

		help reduce contamination in the Borough. On the other hand, any construction activities have the potential to introduce pollution to soil in the short term; although this risk can be mitigated. Medium and longer terms effects are deemed neutral, as it is not known whether there are any contaminated sites within Elstree Way Corridor.					
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The policy seeks a coordinated approach for development of the corridor and thus will avoid "piecemeal or fragmented" development; this will have a beneficial effect on enhancing the character of the local area and any surrounding landscape or other features.	+	+	+	None identified.	n/a
10	To maintain and enhance the quality of countryside and landscape	The Elstree Way corridor is in a developed location and thus there are no obvious effects.	0	0	0	None identified.	n/a
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	In line with the Elstree Way SPG, the redevelopment of the area will encourage sustainable modes of transport such as public transport and walking and cycling initiatives. This will be crucial for the sustainable development of the site. The policy does not currently state this explicitly and thus should be updated to include this reference. Developing the site as a mixed use site with a range of facilities will also reduce the need to travel.	++	++	++	Include reference to encouraging sustainable modes of transport to the corridor.	n/a
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	There is no reference to biodiversity in the policy. Although biodiversity value of the Corridor is likely to be low as it is currently developed there may be potential for protected species such as bats in existing buildings, which should be considered.	-	-	-	The potential for local biodiversity should be considered before and during any construction activities.	n/a
13	To improve the quality of surface and ground waters	There is no reference to how surface and groundwater will be considered during development of the Corridor. As it is development of a previously developed site, it does not increase the floodrisk as it would were it to be built on Greenfield land. Any construction activity has the potential to affect surface and groundwater through	-	-	-	Best environmental practice such as silt traps should be used during construction to minimise the potential for pollution incidents to surface and groundwaters.	n/a

		pollution incidents, and this should be managed appropriately.					
14	To minimise water consumption	There are no obvious effects from this policy on minimising water consumption.	0	0	0	None identified.	n/a
15	To minimise the risk of flooding taking account of climate change	By developing previously developed land the risk of flooding is minimised when compared to developing on Greenfield land.	+	+	+	The use of SUDS should be considered during any new development.	n/a
16	To improve local air quality	By encouraging sustainable modes of transport to the site (in line with the Elstree Way SPG) there is likely to be a reduction in car use to the area and thus an improvement in air quality.	0	+	+	None identified.	n/a
17	To reduce greenhouse gas emissions	By developing the site as mixed use with a mixture of residential, employment, civic and community facilities, the need to travel will be reduced thus having a beneficial effect on GHG emissions. In the short term there will be a need for a large amount of materials to be used in construction having high levels of embodied carbon and thus having a slight adverse effect.	-	+	+	Materials selected for any new construction should have low embodied carbon and assessed in terms of their sustainability.	n/a
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	In line with Policy CS16, all new development will have to be energy efficient and thus by providing new development in the area there is likely to be a beneficial effect against this objective.	+	+	+	None identified.	n/a
19	To reduce the generation of waste and encourage re-use and recycling of waste	New development, however sustainable, will generate waste during construction; this should be managed appropriately.	--	-	-	A site waste management plan should be developed for use during construction.	n/a
20	To provide a prosperous, balanced and stable economy	The development of the mixed use Elstree Way Corridor including employment will aim to provide a prosperous, balanced and stable economy with additional transport infrastructure.	++	+++	+++	None identified.	n/a
21	To sustain and enhance the viability and vitality of town centres	The Elstree Way Corridor is within the town of Borehamwood. The policy aims to promote the identity of the corridor as a civic and commercial gateway and thus provide identity and enhance the vitality of the town centre, having a beneficial effect against this objective. It will also provide diversity by being mixed use development.	++	+++	+++	None identified.	n/a

Appendix I - Summary of SAR Consultation Comments

Table I.1 – Summary of SAR Consultation Comments

Name	Chapter	Representation	Council Response
GO- East	1.31 Sustainability and alternative options	A link in general should be made to the sustainability appraisal, habitats directive and the community strategy, as it could be a good basis for why particular designations are made.	Noted. Greater cross-referencing will be made between paragraphs 2.31 and 1.31-1.33 and Table 3
GO- East	2.1 Spatial Vision	There should be a greater spatial emphasis in terms of where the focus of change will occur. Structure of the plan should be revised for clarity, suggestion of a 'Spatial Portrait' to bring together a section of baseline conditions/background that is spread throughout the document currently. Considering the referencing of policies in the overall wording, to remove the number of cross-references and the lists of supporting policies to produce a succinct plan	Noted. Following subsequent discussions with GO-East, the relevant parts of the Core Strategy will be redrafted to include a greater special emphasis and local specificity, although the ability to deliver a truly spatial plan is also dependent on other stakeholders / service providers giving a clear indication of their future land use requirements; this has not always been possible. It is not considered necessary to restructure the entire document but changes will be made where possible to improve the format of the Core Strategy. The cross-referencing within policies, however repetitious it may appear, was included as a consequence of the Sustainability Appraisal recommendations which sought to ensure there were some environmental 'checks and balances' in
Shire Consulting	2.14 Alternative Options	More consideration should be given to increasing densities.	Hertsmere is a relatively low density area of this part of England. Higher density development was considered through the Sustainability Appraisal but the density increases required to prevent development of Green Belt land would be well in excess of what is approved in most parts of the Borough and unlikely to be in keeping with the area and / or acceptable to the local
Shire Consulting	Policy CS13 Protection and enhancement of historic assets	Much of this policy simply repeats national guidance. (Considered unsound under PPS 12.)	The Sustainability Appraisal guided the Council in the overall framing of these policies.
GO- East	Policy CS13 Protection and enhancement of historic assets	As in CS12 it is thought to repeat that of national policy. It would be considered appropriate to combine these two policies.	The Sustainability Appraisal guided the Council in the overall framing of these policies.
English Nature - Essex Herts & London Team	Policy CS2 Housing beyond existing built up areas	Welcome the inclusion of natural conservation value and landscape conservation value criteria for the identification of Green Belt housing sites. An outline of how this approach will be developed and implemented should be addressed. This approach should then be incorporated into the explanatory text of the finalised policy.	Support noted. Detailed criteria will be covered in supporting studies for the Site Allocations DPD although the Sustainability Appraisal sets out the Council's overarching sustainability objectives, includes those relating to landscape and nature conservation.
English Nature - Essex Herts & London Team	Table 21 Monitoring Framework	The proposed monitoring framework in Table 21 requires some editing to enable it report adequately on changes to resources. Relevant indicators must be identified as it has been done in the sustainability appraisal framework.	We will review this Table

Woodland Trust	Table 6. LDF Core Strategy Objectives	Objective 5. 'To address issues arising from climate change and flooding and to take advantage of water and other natural resources responsibly' We would like to see this objective strengthened and reworded to provide greater clarity. The objective needs to explicitly state that it will address the need to mitigate and adapt to climate and we would suggest that the issue of resource use should be dealt with in a separate objective that incorporates the concept of environmental limits as outlined in the UK Sustainable Development Strategy 'Securing the future' (Defra, 2005). Thus the two objectives would read: • 'To address the urgent need to mitigate the effects climate change and devise strategies for adaptation to climate change' • 'To ensure the sustainable use of natural resources respecting the borough's environmental limits' Further information in support of objective 5: Open green space such as woodland can make a significant contribution towards mitigating the effects of climate change: woodland's role as a carbon sink for CO2 emissions is well known and it can also	There has to be a limit on the number of objectives to ensure that the Core Strategy remains a manageable document. Objective 5 is considered to cover the point raised in the representation and has tested through the Sustainability Appraisal. In respect of the Objective 5, it is not considered necessary to list all types of natural resources and so no change is necessary in that respect. Paragraph 6.4 is being amended to include Woodland with Key Community facilities.
----------------	---------------------------------------	--	--

Appendix J – Assessment of Revised Core Strategy Policies (2011)

Table J.1 – Policy SP1 - Creating Sustainable Development

Policy SP1 - Creating Sustainable Development	<p>Policy SP1 - Creating Sustainable Development</p> <p>The Council will work with Hertfordshire County Council, Hertfordshire Constabulary, NHS Hertfordshire, Registered Social Landlords and other key local stakeholders to enable development in the Borough to make a sustainable contribution to delivering the Core Strategy Spatial Vision and Strategy. Accordingly new development will be required to prioritise the efficient use of brownfield land in delivering the land use requirements of the private sector, local service providers and the different needs of the hierarchy of settlements across the Borough. There will be a focus on prioritising development opportunities in Borehamwood but all existing built up areas within urban settlements will be expected to accommodate opportunities which arise for meeting local housing, jobs growth and other development and service needs.</p> <p>All development across the Borough should:</p> <ul style="list-style-type: none"> i) ensure a safe, accessible and healthy living environment for residents and other users of a development; ii) seek to mitigate the environmental impact of transport by promoting alternatives to the car and opportunities for linked trips; iii) be constructed and operated using a minimum amount of non-renewable resources and be required to use energy efficiently; iv) be of high quality design and appropriate in scale, appearance and function to the local context and settlement hierarchy, taking advantage of opportunities to improve the character and quality of an area; v) avoid prejudicing, either individually or cumulatively, characteristics and features of the natural and built environment; vi) minimise and mitigate the impact on local infrastructure and services; and vii) Comply with the key environmental policies and designations set out in the Core Strategy.

			ST	MT	LT		
	and safeguard soil quality and quantity	contaminated sites being remediated which should lead to long term positive effects in the medium to long term. There may be some short term negative effects due to construction /remediation activities.				contaminated land.	will depend on the effective implementation of Policy CS15 through the requirement of incorporating SUDS into development.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effect	0	0	0	<p>It is recommended that the key aspects of Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment) are included in this policy in order to promote sustainability. This should include:</p> <ul style="list-style-type: none"> • conserve and enhance the natural environment of the Borough. • a presumption against inappropriate development, which causes harm to the openness and appearance of the Green Belt. • conserve or enhance the historic environment of the Borough in order to maintain and where possible improve local environmental quality. 	Performance against this objective will depend on the effective implementation of Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment).
10	To maintain and enhance the quality of countryside and landscape	No obvious effect.	0	0	0	See policy 9.	Performance against this objective will depend on the effective implementation of Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment).
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	This policy will seek to mitigate the environmental impact of transport by promoting alternatives to the car and opportunities for linked trips and should have a positive effect against this SA objective	+	+	+	<p>It is recommended that the key aspects of Policy CS25 (promoting alternatives to the car and ensuring green travel plans are in place in new developments) and Policy CS23 (the development and accessibility to services and employment) are included in this policy in order to promote sustainability. This should include:</p> <ul style="list-style-type: none"> • providing a safe, efficient and affordable transport system that allows access for all 	Recommend cross referencing to Core Policy CS25 in promoting alternatives to the car and ensuring green travel plans are in place in new development (CS Policy 23) to strengthen policy. Successful implementation of such policies should contribute to this objective.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
						to everyday facilities.	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	Development is likely to be accommodated within the available brownfield sites. This should minimise its potential effects on biodiversity. It also requires compliance against other CS Policies in regards to key environmental policies which should avoid any significant environmental impacts and may even enhance some developments. Effects in the short term are deemed neutral as construction activities will have short term effects. Overall it will have beneficial medium to long term effects.	0	+	+	<p>It is recommended that reference is made to the need for compliance with Code for sustainable homes and BREEAM excellent as a minimum standard. This should ensure that developments considered ecological issues.</p> <p>It is also recommended that the key aspects of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development) are included in this policy in order to promote sustainability. This should include:</p> <ul style="list-style-type: none"> • conserve and enhance biodiversity, protected trees, and sites of ecological value in the borough. Proposals should provide opportunities for habitat creation and enhancement throughout the life of a development • to ensure that development proposals do not create an unacceptable level of risk to occupiers of a site, the local community and the wider environment 	Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
13	To improve the quality of surface and ground waters	Additional development will increase impermeable surfaces and rate of surface water runoff which may be contaminated. However, as development is preferred to be located on brownfield land this increase may be minimal. Development on contaminated sites may have short term negative effects due to disturbance. However, remediation of contaminated land as part of new development may benefit water quality in the future.	-/+	0	0	<p>It is recommended that reference is made to the need for compliance with Code for sustainable homes and BREEAM excellent as a minimum standard. This should ensure that developments considered surface water runoff.</p> <p>As objective 12.</p>	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
14	To minimise water consumption	No obvious effect	0	0	0	It is recommended that reference is made to the need for compliance with Code for sustainable homes and BREEAM excellent as a minimum standard. This should ensure that developments consider improving water efficiency of new development.	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
15	To minimise the risk of flooding taking account of	New development may increase impermeable surfaces and rate of polluted runoff or impede the flow or storage of	0	0	-	It is recommended that reference is made to the need for compliance with Code for sustainable	Performance against this objective will depend on the effective

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	climate change	<p>floodwater leading to an increase in localised risk of flooding. However, as development is planned to be prioritised on brownfield land, a significant increase in impermeable surfaces is unlikely.</p> <p>Neutral effects are predicted in the short to medium term. Negative effects are likely in the longer term, when more development is delivered, impermeable surfaces extend and external factors such as climate change consequences play a more visible role.</p>				<p>homes and BREEAM excellent as a minimum standard. This should ensure that developments considered flooding risks and SUDS.</p> <p>It is also recommended that the key aspects of Policy CS 15 (Environmental impact of development) are included in this policy in order to promote sustainability. This should include:</p> <ul style="list-style-type: none"> avoiding development in the floodplain and close to river corridors unless the requirements of the sequential and exceptions tests have been met and flood prevention/mitigation measures are in place. incorporating the use of Sustainable Urban Drainage Systems (SUDS) where appropriate and where required by the Flood and Water Management Act 2010 to help reduce the risk of flooding. 	implementation of Policy CS 15 (Environmental impact of development).
16	To improve local air quality	Additional development will increase energy demand and potentially more vehicle movement may have a negative effect on air quality. However, the policy promotes that new development will help promote the use of sustainable transport modes and reduce the reliance on private car. Further, the policy promotes energy efficiency. Therefore, minor localised effects on air quality may arise during construction (short term).	0	+	+	<p>Reference should be made to the adherence to the Code for Sustainable Homes and BREEAM.</p> <p>It is also recommended that key aspects of Policy CS 15 (Environmental impact of development) are included in this policy in order to promote sustainability. This should include:</p> <ul style="list-style-type: none"> ensuring that pollutants are minimised (including emissions to air, water, soil, light and noise). 	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
17	To reduce greenhouse gas emissions	Neutral effects are likely in the short term, and positive effects are predicted in the long term, when zero carbon development will become a norm and there is a step change in public behaviour towards more 'pro-environmental' habits, use of sustainable transport modes, etc.	0	+	+	<p>It is also recommended that the key aspects of Policy CS 16: Energy and CO₂ Reductions are included in this policy. This should include</p> <ul style="list-style-type: none"> All new residential developments will be required to achieve the following levels of the Code for Sustainable Homes (Code) as a minimum as and when successive updates to Part L of the Building Regulations become mandatory: 	Performance against this objective will depend on the effective implementation of Policy CS 16: Energy and CO ₂ Reductions.

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
						<ul style="list-style-type: none"> 2013 - Code level 4 once updates to Part L come into effect. 2016 - Code level 6 once updates to Part L and the national Zero Carbon Homes policy come into effect. <p>It is also recommended that all non residential development achieve BREEAM excellent or outstanding as a minimum.</p>	
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	<p>All new development or major refurbishment will be required to incorporate energy efficiency and renewable or low carbon sources.</p> <p>Neutral effects are likely in the short term, and positive effects are predicted in the medium to long term, when zero carbon development will become a norm and there is a step change in public behaviour towards more+ 'pro-environmental' habits, e.g. energy savings, use of cleaner vehicles...</p>	0	+	+	<p>It is also recommended that the key aspects of Policy CS 16: Energy and CO₂ Reductions are included in this policy. This should include:</p> <ul style="list-style-type: none"> all new development or major refurbishment to incorporate energy from decentralised and renewable or low carbon sources. 	Performance against this objective will depend on the effective implementation of Policy CS 16: Energy and CO ₂ Reductions.
19	To reduce the generation of waste and encourage re-use and recycling of waste	By detailing that developments will be constructed and operated using a minimum amount of non-renewable resources this should help promote waste reduction in the construction phase but the policy does not address explicitly address domestic or commercial waste issues post construction. This is likely to have detrimental effect in the medium to long term.	0	-	-	<p>It is recommended that reference is made to the need for compliance with the Code for Sustainable Homes and BREEAM. This should ensure that developments consider waste minimisation during operation.</p> <p>It is also recommended that the key aspects of Policy CS 15 (Environmental impact of development). This should include:</p> <ul style="list-style-type: none"> making provision for waste minimisation and recycling within the development during the construction phase and following occupation. 	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Additional development is likely to have direct moderate positive effects through providing additional employment in the building industry and creating jobs and employment in the local area. Additionally, it may have indirect effects in terms of providing regeneration opportunities and improving the image of the area for potential investors.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	Locating the majority of development within the main settlements of Borehamwood, Potters Bar and Bushey may increase footfall in the town centres, increasing their	+	+	+	n/a

		ST	MT	LT		
	vitality and long term sustainability.					

Table J.2 - Policy CS1: The supply of new homes and Policy CS2: - The location of new homes

Policy CS1 –The supply of new homes Policy CS2 - The location of new homes	<p>Policy CS1 The supply of new homes</p> <p>The Council will make provision for 3,550 additional dwellings within the District between 2012 and 2027, a development rate of 237 dwellings per year. In providing for the new homes and identifying new locations for development in the Site Allocations DPD, the Council will take account of:</p> <ul style="list-style-type: none"> i) environmental constraints and compliance with the key environmental policies set out in the Core Strategy (including Policies CS12, CS13, CS15 and CS16); ii) the character, pattern and density of the surrounding area; iii) the need to retain existing housing; iv) the need to locate new development in the most accessible locations taking account of local infrastructure capacity; v) the settlement hierarchy identified in the Hertsmer Core Strategy; and vi) the need to focus development within the boundaries of existing built-up areas. <p>Policy CS2 The location of new homes</p> <p>Priority will be given to locating the majority of residential development within the main settlements of Borehamwood, Potters Bar and Bushey. Between 2012 - 2027, up to 60% of new housing will be sought in Borehamwood, at least 10% in Potters Bar, up to 25% in Bushey and at least 5% in Radlett and other suitable locations.</p> <p>Windfall developments will be supported on appropriate sites in all towns, subject to local environmental constraints, the relationship with the surrounding pattern of development and the requirements of Policies SP1, CS12, CS15, CS16 and other relevant planning policies.</p> <p>Within rural locations and in particular, Shenley, Elstree and South Mimms limited, small scale infilling on suitable sites will be supported.</p>

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term
 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	n/a.	

2	To ensure ready access to essential services and facilities for all residents	The focus in this policy to constraint new homes within existing housing areas or in the most accessible locations will ensure to a certain extent that housing is sited in areas where services and facilities are accessible. These positive effects are likely to be permanent, long term and significant.	++	++	++	None required as positive.	The scale and significance of these effects are likely to be confirmed through the Site Allocations DPD when housing sites are allocated. By locating new developments in existing areas and in most accessible locations, it is likely that these areas are already well served by key services, and located within distance of transport links and employment opportunities.
3	To meet identified housing needs and improve the quality and affordability of housing	An additional 3,550 homes over the plan period at a build rate of 237 per year is considered most appropriate by the Council based on the recent evidence base, local constraints and consultation feedback. The policy aims to meet the identified housing needs. These positive effects are likely to be permanent, long term and significant. Identifying the need in this policy to retain existing housing will also support this objective.	++	++	++	None required as positive.	The scale and significance of these effects are likely to be confirmed through the Site Allocations DPD when housing sites are allocated.
4	To reduce poverty and social exclusion and promote equality of opportunities	By ensuring sufficient provision of housing, the policy should help combat poverty and provide greater equality of housing opportunities. The scale and significance of the positive effects will depend on the location and type of housing but effects are likely to be permanent and long term.	++	++	++	None required as positive.	Significance of the positive effects will depend on the extent to which allocated sites are included in areas of deprivation. It will also depend on the effective implementation of Policy CS4 Affordable Housing and Policy CS21 Securing a high quality and accessible environment (e.g. Lifetime Homes Standards).
5	To reduce and prevent crime, fear of crime and anti social behaviour	This policy enables new development to be delivered. According to Policy CS21 (Securing a high quality and accessible environment) developers would need to ensure that 'Secured by Design' principles are incorporated within all schemes. Therefore, Policy CS1 will lead to indirect positive effects in its enabling function.	+	+	+	None required as positive.	Performance against this objective will depend on the effective implementation of Policy CS21.
6	To improve population's health and reduce inequalities both geographically and demographically	New housing will be of a good quality with high levels of thermal insulation (reducing damp and cold related problems) and, thus, have a positive effect on health. Locating new housing, part of which will be affordable, in deprived areas will also help reduce health inequalities..	+	+	+	n/a	Performance against this objective will depend on the effective implementation of Policy CS4 Affordable Housing and Policy

ENVIRONMENTAL

7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The policy is likely to have a positive effect by focussing the bulk of development on brownfield sites in Borehamwood, Potters Bar and Bushey. The Council's SHLAA has identified that sufficient land available across the Borough to accommodate 3,550 homes over the next 15 years without developing on greenfield land in the Green Belt.	++	++	++	This policy together with the overarching policy on Sustainable Development provide a strong emphasis on making the best use of previously developed land.	
8	To reduce contamination and safeguard soil quality and quantity	Provision of 3,550 homes in the borough, may have short term negative effects if contaminated land is disturbed. However once identified this land has been remediated this should lead to long term positive effects.	-	+	+	Mitigation includes remediation of identified contaminated land.	Performance against this objective will depend on the effective implementation of Policy CS15 through the requirement of incorporating SUDS into development.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The policy explicitly states that the character, pattern and density of the surrounding area are key considerations for identifying new locations. Plus it also refers to Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment) which set out strong safeguards against this SA objective.	+	+	+		Performance against this objective will depend on the effective implementation of Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment).
10	To maintain and enhance the quality of countryside and landscape	See assessment of SA objective 9 above. New development may have the potential to improve the local townscape, in particular in the more deprived areas.	+	+	+		Performance against this objective will depend on the effective implementation of Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment).
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Provision of housing in key settlements in Hertsmere may reduce the need to travel particularly when located in the most accessible locations and by having housing and key services/facilities in one area. This should have minor positive effects.	+	+	+	Provision of adequate/appropriate additional public transport routes and services to encourage the use of public transport. Possible consideration of car clubs in new housing estates when private car use is still needed.	Performance against this objective will depend on the effective implementation of Policy CS23 (Development and accessibility to services and employment) and CS24 (Accessibility and parking).
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	Development is likely to be accommodated within the available brownfield sites. This should minimise its potential effects on biodiversity. Plus the policy also refers to Policy CS12 (The Green Belt and protection and enhancement of the natural environment) which sets out strong safeguards against this SA objective. Overall effects are deemed neutral.	0	0	0	Biodiversity value of brownfield sites should be assessed prior to development, as they may also provide habitats for valuable species.	Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).

13	To improve the quality of surface and ground waters	Additional housing may increase impermeable surface and rate of polluted runoff. However, as housing is planned to be located on brownfield land, a significant increase in impermeable surfaces is unlikely. In addition, development will be required to incorporate SUDS where appropriate. Development on contaminated sites may have short term negative effects due to disturbance. However, remediation of contaminated land as part of new development may benefit water quality in the future. Plus the policy also refers to Policy CS 15 (Environmental impact of development) which requires to minimise the release of pollutants into water and to use SUDS.	-/+	+	+	Use of SUDS to reduce possible effects from increased housing. Mitigation measures during construction to minimise or eliminate contaminated surface run off.	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
14	To minimise water consumption	Additional housing will increase water consumption with a long term negative effect. The policy refers to Policy CS 15 (Environmental impact of development) which requires reducing water consumption. However, a negative residual effect is likely.	-	-	-	All new development should aim to minimise water consumption through the provision of water saving devices such as meters or grey-water recycling schemes which should be included as detailed policies within the Development Control Policies DPD.	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development)..
15	To minimise the risk of flooding taking account of climate change	New development may increase impermeable surfaces and rate of polluted runoff or impede the flow or storage of floodwater leading to an increase in localised risk of flooding. However, as housing is planned to be located on brownfield land, a significant increase in impermeable surfaces is unlikely. In addition, development will be required to incorporate SUDS where appropriate. Neutral effects are predicted in the short to medium term and residual effects are likely in the longer term, when more development is delivered, impermeable surfaces extend and external factors such as climate change consequences play a more visible role.	0	0	-	Ensure that new development allocations are guided by the SFRA findings and recommendations.	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development)..
16	To improve local air quality	Additional housing with increased energy demand and potentially more vehicle movement may have a negative effect on air quality. However, directing new development to urban centres will help promote the use of sustainable transport modes and reduce the reliance on private car. Further, energy demand should be reduced through adherence to the Code for Sustainable Homes in Policy CS16. Therefore, minor localised effects on air quality may arise during construction..(short term).	-	0	0	Mitigation measures to reduce the effects of construction on air quality in the short term.	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development)..

17	To reduce greenhouse gas emissions	<p>Additional housing with increased energy demand and potentially more vehicle movement may lead to increased greenhouse gas emissions. However, directing new development to urban centres will help promote the use of sustainable transport modes and reduce the reliance on the private car. Further, energy demand should be reduced through adherence to the Code for Sustainable Homes in Policy CS16, progressively meeting its increasing standards.</p> <p>Minor negative effects are likely in the short to medium term, and neutral effects are predicted in the long term, when zero carbon development will become a norm and there is a step change in public behaviour towards more 'pro-environmental' habits, use of sustainable transport modes, etc.</p>	-	-	0	.	Performance against this objective will depend on the effective implementation of Policy CS 16: Energy and CO ₂ Reductions.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	<p>Additional housing will lead to an increased energy demand. However, the level of energy demand should be reduced through adherence to the Code for Sustainable Homes in Policy CS16, progressively meeting its increasing standards.</p> <p>In addition, all new development or major refurbishment will be encouraged to incorporate energy from decentralised and renewable or low carbon sources.</p> <p>Minor negative effects are likely in the short to medium term, and neutral effects are predicted in the long term, when zero carbon development will become a norm and there is a step change in public behaviour towards more 'pro-environmental' habits, e.g. energy savings, use of cleaner vehicles..</p>	-	-	0		Performance against this objective will depend on the effective implementation of Policy CS 16: Energy and CO ₂ Reductions.
19	To reduce the generation of waste and encourage re-use and recycling of waste	Additional housing will increase waste generation; however Policy CS15 'Environmental Impact of Development' should help reduce the amount of waste generated. However, a negative residual effect is likely.	-	-	-		Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development)..
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Additional house building is likely to have direct minor positive effects through providing additional employment in the house building industry. The effect is likely to be long term as a yearly supply of housing is required through this policy. Additionally, it may have indirect effects in terms of providing regeneration opportunities and improving the image of the area for potential investors.	+	+	+	Not required as effect positive.	

21	To sustain and enhance the viability and vitality of town centres	Locating the majority of residential development within the main settlements of Borehamwood, Potters Bar and Bushey may increase footfall in the town centres, increasing their vitality.	+	+	+	n/a	
----	---	---	---	---	---	-----	--

Table J.3 - Policy CS3: Phasing of Development

Policy CS3 - Phasing of Development		<p>To facilitate a sustainable rate of housebuilding within the Borough under the terms of Policies CS1 and CS2, major housing sites will be phased in five year periods from 2011. Based on the findings of Annual Monitoring Reports, allocated land in later phases will be brought forward, if necessary, to maintain the five year supply of land for housing.</p> <p>To prevent the overdevelopment of housing in the Borough ahead of required infrastructure and community facilities, unimplemented residential land allocations and new residential proposals of 50 units (net) or more will not be permitted where the number of projected completions, as detailed in Annual Monitoring Report housing trajectory, is forecast to exceed 20% of the proportion sought in each phase .</p> <p>Where housing delivery is projected to fall below the proportion sought in each phase by at least 20% over the following three years, a review of the phasing and location of housing allocations will be undertaken including consideration of land presently designated as Green Belt.</p>					
Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative							
SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	None required.	
2	To ensure ready access to essential services and facilities for all residents	A phased programme for housing in Hertsmere is likely to ensure the delivery of sustainable communities across Hertsmere ensuring that infrastructure is in place to reduce the burden on existing infrastructure and community facilities which is likely to occur with new housing development. The positive effects are likely to be permanent and occur in the short, medium and long term through the managed release of housing during the plan period.	++	++	++	None required.	The availability of supporting infrastructure and the need to provide additional capacity in some locations will determine the timing of the release of housing sites.
3	To meet identified housing needs and improve the quality and affordability of housing	A phased programme for housing delivery in Hertsmere aims to ensure that appropriate level of housing is delivered throughout the Core Strategy period, preventing the overdevelopment or addressing a predicted shortfall.	+	+	+		The availability of supporting infrastructure and the need to provide additional capacity in some locations will determine the timing of the release of housing sites.

4	To reduce poverty and social exclusion and promote equality of opportunities	A managed release of housing should enable housing allocation sites to take account of areas of deprivation and use housing development as a catalyst for promoting equality of opportunities for housing. The availability of supporting infrastructure and the need to provide additional capacity for community facilities prior to the release of housing may also combat poverty and social exclusion.	+	+	+	The detailed maps showing deprivation levels in the borough should be used to inform the release of housing to promote regeneration opportunities.	The Site Allocations DPD will identify the housing sites and as such, will confirm the scale and significance of the positive effects which will depend on the extent to which allocated sites are included in or nearby areas of deprivation.
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	Designing out crime should be encouraged in new housing developments.	Designing out crime should be encouraged in new housing developments.
6	To improve population's health and reduce inequalities both geographically and demographically	Similarly to the commentary for SA objective 4, an informed phasing of housing that aims to tackle issues of deprivation, could also deliver benefits against this SA objective, helping to address the issue of health inequalities.	+	+	+	The detailed maps showing IMD Multiple Deprivation and Health Domain ranking in the borough should be used to inform the release of housing to promote regeneration opportunities.	
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	See assessment of Core Policies CS1 and CS2. Positive effects are likely due to the focus on the delivery of housing on brownfield land.	+	+	+		This policy is closely linked to Core Policy CS1 in terms of providing new housing development during the plan period but refers to the phasing of the housing.
8	To reduce contamination and safeguard soil quality and quantity	See assessment of Core Policies CS1 and CS2.	-	+	+		As above.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	See assessment of Core Policies CS1 and CS2.	+	+	+		As above.
10	To maintain and enhance the quality of countryside and landscape	See assessment of Core Policies CS1 and CS2.	+	+	+		As above.
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	See assessment of Core Policies CS1 and CS2.	+	+	+		As above.

12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	See assessment of Core Policies CS1 and CS2.	0	0	0		As above.
13	To improve the quality of surface and ground waters	See assessment of Core Policies CS1 and CS2.	-/+	+	+		As above.
14	To minimise water consumption	See assessment of Core Policies CS1 and CS2.	-	-	-		As above.
15	To minimise the risk of flooding taking account of climate change	See assessment of Core Policies CS1 and CS2.	0	0	-		As above.
16	To improve local air quality	See assessment of Core Policies CS1 and CS2.	0	0	0		As above.
17	To reduce greenhouse gas emissions	See assessment of Core Policies CS1 and CS2.	-	-	0		As above.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	See assessment of Core Policies CS1 and CS2.	-	-	0		As above.
19	To reduce the generation of waste and encourage re-use and recycling of waste	See assessment of Core Policies CS1 and CS2.	-	-	-		As above.
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The policy is likely to have positive effects by ensuring a sustainable rate of house building over the plan period enabling stability in the local construction industry. Additionally, phasing of development will allow for adequate supporting infrastructure to be planned and provided for contributing towards a balanced and stable economy.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	No obvious effects.	0	0	0	n/a	

Table J.4 - Policy CS4: Affordable Housing

Policy CS4 - Affordable Housing	<p>To increase the supply of Affordable Housing, developments of 10 self-contained, residential units or more (gross), or residential sites of more than 0.3 hectares, should make provision for an element of Affordable Housing. On sites of fewer than 15 units, this may be delivered through the provision of intermediate housing (including shared ownership and share equity), with sites of 15 units or more containing a mix of social rented housing, affordable rent and intermediate housing.</p> <p>On qualifying sites, 35% of the housing units should be affordable, equating to an affordable housing target of 985 homes from 2012 to 2027.</p> <p>The Council will seek the maximum level of Affordable Housing on site. A lower level of provision will not be acceptable unless the Council agrees that its Affordable Housing objectives are being met.</p> <p>As a guideline, on sites of 15 or more units (gross) or 0.5 hectares, the council expect that 75% of the Affordable Housing units will be delivered as social rented and/or affordable rent housing and the remainder as intermediate housing. The precise tenure and dwelling mix will be agreed with the Council on a site-by-site basis and reflecting current housing needs or updated supplementary guidance.</p>
<p>Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative</p>	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	n/a	
2	To ensure ready access to essential services and facilities for all residents	No obvious effects.	0	0	0	n/a	
3	To meet identified housing needs and improve the quality and affordability of housing	This policy seeks to optimise the supply of affordable housing in the Borough. This policy should result in increased levels of affordable housing on all qualifying sites (i.e. over 10 units) through 35% of homes being affordable. The effects are likely to be positive, long term and significant.	++	++	++	None required as positive.	The Council's Supplementary Planning Document on Affordable Housing provides additional clarification of the different types of Affordable Housing and where any lower requirement may exceptionally be considered acceptable. Monitoring of affordable housing units through the development control process and the AMR.
4	To reduce poverty and social exclusion and promote equality of opportunities	The availability of a mix of housing tenure is an important determinant of poverty and equality. This seeks to provide a balanced mix of housing tenure based on identified need. This policy requires 75% social rent and/or affordable rent and 25% intermediate housing on all qualifying sites. These proportions are considered to best address local Affordable Housing requirements. The effects are likely to be positive, long term and significant.	++	++	++	Monitoring of affordable housing units and tenure mix through the development control process and the AMR.	As objective 3.

5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	Design out crime should be encouraged in new housing developments.	
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0	n/a	
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	No obvious effects.	0	0	0	n/a	
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effects.	0	0	0	n/a	
10	To maintain and enhance the quality of countryside and landscape	No obvious effects.	0	0	0	n/a	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	No obvious effects.	0	0	0	n/a	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	No obvious effects.	0	0	0	n/a

14	To minimise water consumption	No obvious effects.	0	0	0	n/a	
15	To minimise the risk of flooding taking account of climate change	No obvious effects.	0	0	0	n/a	
16	To improve local air quality	Provision of affordable housing may reduce the need for some sections of the community to travel so having a long term positive effect on air quality	+	+	+	Not required as effect positive.	Sections of the community such as key workers or others with low income may have reduced reliance on cars if availability of affordable housing means their housing and employment needs are met in the same area
17	To reduce greenhouse gas emissions	Provision of affordable housing may reduce the need for some sections of the community to travel so having a long term positive effect on greenhouse gas emissions	+	+	+	Not required as effect positive.	Sections of the community such as key workers or others with low income may have reduced reliance on cars if availability of affordable housing means their housing and employment needs are met in the same area

18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The policy is likely to have a significant positive effect through the provision of affordable homes, particularly for key workers, which will contribute towards a balanced and stable economy. The effect is likely to be long term and permanent.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	No obvious effects.	0	0	0	n/a	

Table J.5 - Policy CS5: Affordable Housing in rural areas on “Exception” sites

Policy CS5 - Affordable Housing in rural areas on “Exception” sites	The inclusion of small-scale Affordable Housing schemes, as an exception to normal policies, will be permitted in and immediately adjacent to settlements in the Green Belt, as identified on the Core Strategy Key Diagram. "Exception" sites should be small in scale in relation to the size of settlements and such schemes should meet the identified needs of people local to the village or settlement, remain affordable in perpetuity and be managed by a Registered Social Landlord. Priority will be given to sites located on previously developed land within settlements and the scale of development should not exceed the level of need identified or have adverse effects on the natural and built environment.

SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effect	0	0	0	n/a.	
2	To ensure ready access to	This policy seeks to identify land for	++	++	++	None required as positive.	See comment for SA objective 1. Performance of

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	essential services and facilities for all residents	gypsies and travellers through the Site Allocations DPD. This will be based on a range of criteria one being that the sites are located within a reasonable proximity to key local services. This will ensure access to services and facilities for this section of the community and as such, this policy will have positive, permanent and significant positive effects.					this objective will also depend on the implementation of Policy CS24 - Accessibility and parking
3	To meet identified housing needs and improve the quality and affordability of housing	On the basis of identified need, this policy will allocate sites for gypsies and travellers thus meeting housing need for this section of the community. However, in identifying sites and permitting additional or extended sites based on a range of criteria, this may compromise the availability of land to meet identified housing needs particularly if the housing target in Hertsmere are exceeded (competing of available land). These negative effects are dependent on the final housing targets for Hertsmere and are likely to be felt in the longer term.	+	+	+/-	Site allocations should be addressed with Site Allocations DPD.	
4	To reduce poverty and social exclusion and promote equality of opportunities	This policy will identify sites for gypsies and puts forward criteria based approach for allocating additional sites and as such, seeks to accommodate the gypsy community in Hertsmere. This policy will contribute to social inclusion of the gypsy and traveller community. In addition, it seeks to promote equality of opportunities by locating sites within a reasonable proximity to key local services. This policy will have permanent positive and significant effects.	++	++	++	None required as positive.	
5	To reduce and prevent crime, fear of crime and anti social behaviour	This criterion based approach seeks to pro-actively manage gypsy and traveller sites through direct allocation and identifying future sites. Allocating specific encampments should help to safeguard against certain crimes. In addition, this policy has the potential to reduce fear of crime through ensuring sites are properly planned and managed. This policy will have positive, permanent and significant effects.	++	++	++	None required as positive.	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
6	To improve population's health and reduce inequalities both geographically and demographically	This policy identifies sites for gypsies and puts forward criteria based approach for allocating additional sites. One such criterion is the ability to receive essential services including water, sewerage drainage and water disposal and as such, this policy ensures that sites are serviced by appropriate sanitation arrangements. In addition, another criterion seeks to ensure that sites are located in accessible locations thus improving opportunities to health care and leisure. Overall this policy will have positive, permanent and significant effects.	++	++	++	None required as positive.	
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The policy is likely to have a positive effect by adopting a sequential site selection process with an emphasis on land which has been previously developed. There is potential for negative effects if the Site Allocations DPD identifies sites on greenfield land. Overall, the scale of effect is dependent on those sites identified in the Site Allocations DPD.	+/-	+/-	+/-	Policy already emphasises land which has been previously developed. Greenfield development may be unavoidable if demand requires all potential previously developed sites to be utilised.	Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
8	To reduce contamination and safeguard soil quality and quantity	Selection of previously developed sites should have a positive effect as any contamination identified in this land should be remediated before development occurs. However there is a potential for a negative effect if the site allocation DPD identifies sites on Greenfield land. This may cause contamination of the site and most likely lead to reduction in soil quality and quantity	+/-	+/-	+/-	Policy already emphasises land which has been previously developed. Greenfield development may be unavoidable if demand requires all potential previously developed sites to be utilised.	Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The policy has the potential for development on greenfield land which may have negative effects on landscape character and historic assets. However the detailed criteria to be considered (including rural amenity and visual intrusion) have the potential to mitigate potential negative effects.	-	-	-	Further site specific mitigation may be required such as landscape bunding and planting or archaeological site evaluation.	Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
10	To maintain and enhance the	See assessment of SA objective 9 above.	-	-	-	Further site specific mitigation	Performance against this objective will depend on

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	quality of countryside and landscape	The policy has the potential for development on greenfield land, however the detailed criteria to be considered (including rural amenity and visual intrusion) has the potential to mitigate potential negative effects.				may be required such as landscape bunding and planting. There is the potential for residual effects on the quality of the countryside that may not be able to be mitigated.	the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Location of sites in reasonable proximity to key local services may reduce dependence on private car use with a minor positive effect. However the provision of the sites themselves may attract more people and vehicles to the area undermining the original benefit	+/-	+/-	+/-	Provision of public transport links to identified sites	Performance against this objective will depend on Core Policy 25 in promoting alternatives to the car and ensuring green travel plans are in place in new development (CS Policy 23) to strengthen policy. Successful implementation of such policies should contribute to this objective.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	There is potential for small scale development of Greenfield sites which has the potential for a negative effect on undesignated habitats. Effects have the potential to be long term and permanent.	-	-	-	Policy could be strengthened to recognise the need of minimising negative biodiversity effects.	Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
13	To improve the quality of surface and ground waters	Provision of authorised sites with appropriate infrastructure to manage water, sewage, drainage and water disposal should have a positive effect However if the site allocation DPD identifies sites on Greenfield land even the provision of such infrastructure could cause disturbance and effects on water quality.	+/-	+/-	+/-	Measures to minimise the effect of development on Greenfield land possibly to include SUDS.	Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
14	To minimise water consumption	Where sites are provided with infrastructure to deliver water, there will be a negative long term effect on reducing water consumption.	-	-	-	Possible for the installation of rain water harvesting and grey water recycling systems to minimise water consumption.	
15	To minimise the risk of flooding taking account of climate change	Provision of sites in previously developed areas should not any additional effect on flood risk. However if the site allocation DPD identifies sites on Greenfield land there will be a negative effect as site development would increase the amount of impermeable surfaces in the area	-	-	-	Development decisions must be guided by the principles of PPS25. Flood risk assessments will be required for the development of sites that lie within flood zones 2 and 3 as defined by the Environment Agency.	Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
16	To improve local air quality	No obvious effects.	0	0	0

19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The policy is likely to have a significant positive effect through the provision of appropriate types of homes, particularly for local residents, which will contribute towards a balanced and stable economy. The effect is likely to be long term and permanent.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	Supplying appropriate housing mix within towns will be vital to ensure that town centres remain viable.	+	+	+	Potential reference to town centres needs may reinforce this objective.	

Table J.8 - Policy CS8: Scale and Distribution of Employment Land

Policy CS8 - Scale and Distribution of Employment Land	<p>The Council will support development proposals in appropriate locations, which attract commercial investment, maintain economic competitiveness and provide employment opportunities for the local community. In order to encourage economic development and promote a competitive local economy, provision will be made for the supply of at least 110 ha of designated employment land for B-class development within the Borough up to 2026, focused on the following locations and as indicated on the Key Diagram:</p> <p>Employment Areas</p> <ul style="list-style-type: none"> <input type="checkbox"/> Elstree Way, Borehamwood <input type="checkbox"/> Stirling Way, Borehamwood <input type="checkbox"/> Cranborne Road, Potters Bar <input type="checkbox"/> Station Close, Potters Bar <input type="checkbox"/> Otterspool Way, Bushey <p>Key Employment Site</p> <ul style="list-style-type: none"> <input type="checkbox"/> Centennial Park, Elstree <p>The boundaries of these locations will be clarified in the Site Allocations DPD.</p> <p>The existing Safeguarded Land adjoining Cranborne Road Employment Area will be retained and a new area of land between the A1 and Rowley Lane, adjoining the Elstree Way Employment Area, will be designated as Safeguarded Land for a mix of phased, B class development. Any development should form part of a comprehensive integrated package measures to improve their respective adjoining Employment Areas and associated access. The boundaries of the area adjoining the Elstree Way Employment Area and parameters for development for the land adjoining Cranborne Road and Elstree Way will be clarified in the Site Allocations DPD.</p> <p>Any releases of vacant or surplus strategically designated employment land will only be considered following an assessment of the suitability of a site for continuing employment use and as required, an employment land needs assessment.</p> <p>Following the introduction of a Local Development Order to support economic development within the Elstree Way Employment Area, the Council will consider the promotion of similar Local Development Orders in other employment areas, which will grant permission for small-scale changes to properties within these locations.</p>
<p>Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative</p>	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	M T	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	New employment development may provide basis for apprenticeships, which would help young people gain job-specific skills and achieve nationally recognised qualifications.	+	+	+		

2	To ensure ready access to essential services and facilities for all residents	Focusing new employment use in existing established employment areas will ensure good accessibility to employment and services and facilities. The positive effects are likely to be permanent and be consistent in the short, medium and long term.	+	+	+		In combination with the accessibility and sustainable transport policies (CS23, 24 and 25), opportunities for accessibility are likely to be enhanced. The scale and significance of these positive effects will be confirmed through the SA of the Site Allocations DPD.
3	To meet identified housing needs and improve the quality and affordability of housing	This policy allows for the release of existing employment sites for new housing where appropriate. The release of sites would contribute to providing sites to meet identified housing targets and needs resulting in overall positive effects. The effects are assessed as being minor, as such releases are likely to be limited.	+	+	+		The scale and significance of these positive effects will be confirmed through the SA of the Site Allocations DPD where the boundaries of existing employment and housing sites are identified.
4	To reduce poverty and social exclusion and promote equality of opportunities	New employment development will provide more employment opportunities for local people, reducing worklessness. Directing new employment development to the areas with good accessibility will also help promote equality of opportunities for those without access to a private car.	+	+	+		
5	To reduce and prevent crime, fear of crime and anti social behaviour	The policy should deliver benefits over time by adding to the amount of employment opportunities within the Borough and bringing under-used sites into development.. More local employment opportunities may help reduce anti-social behaviour.	+	+	+		
6	To improve population's health and reduce inequalities both geographically and demographically	Some indirect effects are likely through provision of employment in accessible locations, which may encourage walking and cycling. In addition, provision of employment to local people may have positive effects on mental wellbeing through reduced levels of worries, improved self-esteem and income. .	+	+	+		

ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	Redistribution of land may result in more efficient use of land in general with employment land being situated in suitable areas and vice versa with housing land. This will have a minor positive effect. However, the policy will result in some greenfield development for employment use thus conflicting with this objective. Overall effects are mixed.	+/-	+/-	+/-	Negative effects should be minimised through the requirement of the Policy SP1 (Sustainable development) for new development to prioritise the efficient use of brownfield land in delivering the land use requirements.	The scale and significance of these effects will be confirmed through the SA of the Site Allocations DPD where the boundaries of existing and new employment and housing sites will be identified.
8	To reduce contamination and safeguard soil quality and quantity	Redevelopment of the existing contaminated sites either for employment or for a different use will require land remediation through Policy CS15 (Environmental impact of development). Potential development within the Greenbelt will involve an increase in hard surfacing and increased level of polluted run-off, which may affect soil quality and will lead to the loss of some greenfield land. Overall effects are mixed.	+/-	+/-	+/-	Effects may be mitigated through the use of SUDS and minimising emissions to soil – Policy CS15 (Environmental impact of development). The use of impermeable surfaces should be minimised. Mitigation measures during construction and operation to minimise contamination risk.	The scale and significance of the negative effects will be dependent on the scale and nature of contamination if any is found and the successful implementation of policy CS15.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The development of additional Greenbelt land for employment use is likely to have a negative effect on landscape character. Effects are deemed minor, as the safeguarded areas represent extensions to the existing employment sites and are adjacent to the road networks. Therefore, effects on visual openness should be minimised.	-	-	-	Although the extensions of Employment Areas are likely to be less intrusive than the equivalent expansion of an existing urban or rural area, residual effects would require mitigation. The design of development should reflect the local landscape and historical character, along with measures such as planting, landscape bunding and biodiversity enhancements to minimise negative effects.	<p>The scale and significance of these effects will be confirmed through the SA of the Site Allocations DPD where the boundaries of existing employment and housing sites are identified.</p> <p>The negative effects of new development identified should be minimised through the effective implementation of Policy CS15 (Environmental impact of development) and CS13 (Protection or enhancement of historic heritage assets).</p>
10	To maintain and enhance the quality of countryside and landscape	The development of additional Greenbelt land for employment use is likely to have a negative effect on landscape character. Effects are deemed minor, as the safeguarded areas represent extensions to the existing employment sites and are adjacent to the road networks. Therefore, effects on visual openness should be minimised.	-	-	-	See mitigation for SA objective 9.	As above.

11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Provision of employment land in settlements should reduce the need for out-commuting and would enable the use of public transport and non-motorised modes of transport. The extensions to the existing employment areas have been planned taking into account their accessibility with a view of reducing car dependency. Therefore, overall effects are minor positive.	+	+	+	Early development of work travel plans. Improvements of the existing public transport links and establishment of new ones.	Effects will depend on the effective implementation of accessibility and sustainable transport policies (CS23, 24 and 25),
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	The development of additional Greenbelt land is likely to have a slight negative effect on undesignated habitats. . Effects are deemed minor, as the safeguarded areas represent extensions to the existing employment sites and adjacent to the road networks. This should help minimise the fragmentation of spatial continuity of natural vegetation and thus reduce effects on local habitats.	-	-	-	See mitigation for SA objective 9.	The scale and significance of these effects will be confirmed through the SA of the Site Allocations DPD where the boundaries of existing employment and housing sites are identified. Effects should be mitigated through the effective implementation of the Policy CS15 (Environmental impact of development).
13	To improve the quality of surface and ground waters	Redevelopment of the existing contaminated sites either for employment or for a different use will require land remediation through Policy CS15 (Environmental impact of development). Potential development within the Green Belt will involve an increase in hard surfacing and increased level of polluted run-off, which may affect soil quality and will lead to the loss of some greenfield land. However, the area of the extension of the employment area in Estree Way is already partially hard surfaced. Overall effects are mixed..	+/-	+/-	+/-	Effects may be mitigated through the use of SUDS – Policy CS15 (Environmental impact of development). The use of impermeable surfaces should be minimised. Mitigation measures during construction and operation to minimise pollution risk.	Successful implementation of Core Policy 15 should help minimise the effects of new development.

14	To minimise water consumption	New employment development will increase water consumption rates.	-	-	-	Predicted negative effects could be minimised through the adherence to BREEAM standards (as a minimum 'Good') for non-residential development. It is recommended that this is added to Policy CS15 to the bullet ii) on water efficiency after the reference to the Code for Sustainable Homes. This would amplify the policy and provide a link with a forthcoming Development Control DPD.	Reference to the Code for Sustainable Homes in Policy CS15 only deals with water efficiency in residential development. To adequately address water efficiency as well as other environmental aspects of non-residential buildings, it is necessary to also refer to BREEAM standards in Policy CS15.
15	To minimise the risk of flooding taking account of climate change	Development of new employment areas will increase hard surfacing and accelerate runoff, which may cause an increase in localised flood risk. This should be minimised through the requirement in Policy CS15 for development proposals to take account of the policy recommendations of the Councils SFRA and incorporate SUDS where appropriate.	-	-	-	Development decisions must be guided by the principles of PPS25. Developments should also be designed to be capable of withstanding flood events i.e. by identifying appropriate ground and basement floor uses.	Successful implementation of Core Policy 15 should help minimise the effects of new development.
	To improve local air quality	Possible reduction in car use and the need to travel due to provision of employment land in established settlements should benefit local air quality. However during construction there may be some negative localised effects on air quality.	+/-	+/-	+/-	Measures to reduce any pollution during the construction phase through the implementation/reference to a Construction and Environment Management Plan.	Successful implementation of Core Policy 15 should help minimise the effects of new development.
17	To reduce greenhouse gas emissions	New employment development delivered over the Plan period is likely to increase the need for energy and GHG emissions. Possible reduction in car use due to provision of employment land in accessible locations and the requirement for development to gradually become zero carbon should help reverse negative effects to positive ones against this SA objective.	-	-	+		Successful implementation of Core Policies 16, CS23, 24 and 25 should help minimise the effects of new development.

18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	New employment development delivered over the Plan period is likely to increase the need for energy. However, safeguarding employment areas which are integrated with the local public transport, pedestrian and cycle networks and which seek to reduce the use of the private, together with the requirement in Policy CS 16 for non-residential development to become zero carbon by 2019 should help reverse negative effects to positive effects against this SA objective in the medium to long term. Further Local Development Orders promoted through this policy may help encourage the installation of solar panels or other renewable energy technologies.	-	-/+	+		Successful implementation of Core Policies 16, CS23, 24 and 25 should help minimise the effects of new development.
19	To reduce the generation of waste and encourage re-use and recycling of waste	New employment development delivered over the Plan period is likely to lead to an increase in absolute amount of waste arisings.	-	-	-	Waste Management Plans should be developed before construction. Sites' and buildings' design should seek to achieve and stimulate waste minimisation and recycling.	Successful implementation of Core Policy 15 should help minimise the effects of new development. Adding reference to BREEAM standards in Policy CS 15 would strengthen the performance of the Core Strategy against this SA objective as well.
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	A comprehensive review of the distribution of employment areas on the basis of improving the ease and attractiveness of development (through selective release of sites and greenfield release) should help to increase take up of employment sites for development as well as enabling development of former employment sites for alternative uses. Significant positive effects are likely to be Borough wide.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	The release of constrained employment sites within town centres for alternative forms of development may have benefits for town centre vitality and viability through enabling beneficial development of vacant/under-used sites, for example for housing or leisure uses. Moderate positive effects are predicted.	++	++	++	Not required as effect positive.	

Table J.9 – Policy CS9: Local significant employment sites and Policy CS10: Land use within employment areas

<p>Policy CS9 - Local significant employment sites and</p> <p>Policy CS10 - Land use within employment areas</p>	<p>Policy CS9 -In order to sustain a competitive local economy with good access to employment for the local population, the Council will seek to maintain a supply of smaller, business units across the Borough. These designated local significant employment sites which are focused on employment generating uses are located at following locations and are indicated on the Key Diagram:</p> <ul style="list-style-type: none"> • Wrotham Business Park • Borehamwood Enterprise Centre and adjoining sites • Theobald Court and adjoining site, Borehamwood • Lismirrane Industrial Park, Elstree • Hollies Way Business Park, Potters Bar • Beaumont Gate, Radlett • Farm Close sites, Shenley <p>The boundaries of these locations will be clarified in the Site Allocations DPD. Any redevelopment of a Locally Significant Employment Site for housing or other development will be based on an assessment of the criteria in Policy CS8.</p> <p>Policy CS10 - Activities within designated Employment Areas will be limited to office, industrial, warehousing and other B-class uses. The provision of training opportunities for the local workforce will be encouraged and sought as part of new employment development across the Borough.</p> <p>Any new office development exceeding 2,500 sq m within Employment Areas will be limited to the Elstree Way, Borehamwood Employment Area, subject to meeting environmental and other relevant DPD / Local Plan Policies</p> <p>Certain other uses will also be permitted within Employment Areas, comprising waste management, builder's merchants, film / television studios and production, and car dealerships and trade counter operations where the extent of any (non-trade) retail or sales activity display remains ancillary to the principal use of the site. All development should meet the requirements of Policies CS12, CS15 and CS16 to ensure that potential contamination is minimised and remediated.</p>

SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0		
2	To ensure ready access to essential services and facilities for all residents	No obvious effects.	0	0	0		
3	To meet identified housing needs and improve the quality and affordability of housing	This policy provides strict control of the protection of Green Belt and the natural environment. This may compromise the ability for Hertsmere to meet identified regional housing targets. However, this policy does allow certain areas to permit development provided that strategic gaps are maintained. Therefore this policy could allow the release of certain greenbelt areas to meet identified housing subject to strict criterion and as such, could have positive effects in the short, medium and longer term depending on the findings of the urban capacity study.	+	+	+		
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0		
5	To reduce and prevent crime.	No obvious effects.	0	0	0		

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
	fear of crime and anti social behaviour						
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0		
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The continued protection of green belt and the natural environment will have a significant positive effect by constraining development to previously developed land. The positive effect is likely to be long term and in the short and medium terms. Any potential loss in the longer term to meet identified housing targets should be mitigated to a certain extent with this policy.	++	++	++	Not required as effect positive.	This policy could be strengthened through cross referencing to CS1 where the focus for new development is within existing urban areas. Performance against this objective will depend on the effective implementation of Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment).
8	To reduce contamination and safeguard soil quality and quantity	Emphasis for developments to conserve and enhance the natural environment and biodiversity should be complementary to reducing contamination and safeguarding soil. The positive effect is likely to be achieved in the short and medium terms. Any potential loss in the longer term to meet identified housing targets should be mitigated to a certain extent with this policy.	+	+	+/-	Not required as effect positive.	Performance against this objective will depend on the effective implementation of CS 15 (Environmental impact of development).
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effects.	0	0	0	n/a	Performance against this objective will depend on the effective implementation of Policy CS13 (Protection or enhancement of heritage assets), Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and CS 15 (Environmental impact of development).
10	To maintain and enhance the quality of countryside and landscape	The quality of the countryside and the natural environment will be maintained by the policy protecting green belt and areas of urban open land. The effect is likely to be significantly positive, in the short and medium terms. However, the extent to which countryside and open space land may be lost to meet housing targets, there are likely to be negative effects to a certain degree. The policy does outline the need for adequate mitigation measures therefore negative effects	++	++	+/-	Not required as effect positive.	Performance against this objective will depend on the effective implementation of, Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and CS 15 (Environmental impact of development).

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		should be minor.					
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	No obvious effects.	0	0	0		
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	The protection of biodiversity, in addition to the protection of green belt and the natural environment will have a significant positive effect on protecting habitats of national and local importance. The effect is likely to be significantly positive, long term and permanent.	++	++	++	Not required as effect positive.	Performance against this objective will depend on the effective implementation of CS 15 (Environmental impact of development).
13	To improve the quality of surface and ground waters	No obvious effects.	0	0	0		
14	To minimise water consumption	No obvious effects.	0	0	0		
15	To minimise the risk of flooding taking account of climate change	No obvious effects.	0	0	0		
16	To improve local air quality	No obvious effects.	0	0	0		
17	To reduce greenhouse gas emissions	No obvious effects.	0	0	0		
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0		
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0		
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Protection of the historic and natural environment and landscape character is likely to have a slight positive effect by attracting tourism and recreation uses of areas of green belt and historic attractions. The effect is likely to be slightly positive, long term and permanent.	+	+	+	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	Protection of the green belt and urban open land is likely to result in greater concentration of development within existing settlements, which should help to improve their viability through increased demand for services and facilities. The effect is likely to be slightly positive, long term and permanent.	+	+	+	Not required as effect positive.	

Table J.12 - CS13 Protection or enhancement of historic heritage assets

Policy CS13 Protection or enhancement of historic heritage assets	All development proposals must conserve or enhance the historic environment of the Borough in order to maintain and where possible improve local environmental quality. Development proposals should be sensitively designed to a high quality and not cause harm to identified, protected sites, buildings or locations of heritage or archaeological value including Conservation Areas, Listed Buildings, Historic Parks and Gardens, Scheduled Ancient Monuments, and identified and as yet unidentified Archaeological Remains. The Council will take account of available historic environment characterisation work, including Conservation Area appraisals and archaeological assessments when making decisions affecting heritage assets and their settings.

Table J.16 - Policy CS17: Access to services

Policy CS17 Access to Services	<p>The Council will work with local service providers to facilitate and promote their land use and buildings requirements through the identification of mixed-use and other development opportunities in the Site Allocations DPD. The Council will also require new development to contribute to the Community Strategy aim of achieving fair access to key community facilities and the wider goal of creating a safer and more sustainable environment.</p> <p>New proposals will be assessed against their impact on existing local infrastructure, services and resources and where necessary, new provision of required key community facilities should be made as part of the development in consultation with the local community and local service providers and in order to meet or fund any infrastructure impact, having regard to the provisions of Policy CS20.</p>

SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	New provision required by this policy is highly likely to comprise educational facilities, and therefore this policy is likely to have permanent positive effects, although the likelihood of these effects occurring is not certain and dependent on implementation and nature of development coming forward.	+	+	+	None required as positive.	The scale and magnitude of the effects will depend on the successful implementation of this policy and of Policy CS20 and confirmed through the appraisal of the Site Allocations DPD. This policy does not stipulate the type of community facilities in the policy wording.
2	To ensure ready access to essential services and facilities for all residents	This aim of this policy is to ensure fair access to services to contribute to the Community Strategy and create sustainable communities and therefore	++	++	++	None required as positive.	This policy is highly complementary with the SA objective. The scale and magnitude of the effects will

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		fully supports this objective. This policy will have permanent positive and significant effects given the flexibility in its wording and the overall aim of improving access to services.					depend on the successful implementation of this policy and confirmed through the appraisal of the Site Allocations DPD.
3	To meet identified housing needs and improve the quality and affordability of housing	This policy requires the assessment of new residential proposals against their impact on existing local infrastructure, services and resources. Where there is a shortfall in community facility provision, the Council through this policy will request new provision and as such, may restrict development or restrict affordable housing provision as developers seek to minimise loss of profit. The likelihood of negative effects is uncertain and will depend on location and nature of developments.	-	-	-		The scale and magnitude of the effects will depend on the successful implementation of this policy and of Policy CS20 and confirmed through the appraisal of the Site Allocations DPD.
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0	n/a	
5	To reduce and prevent crime, fear of crime and anti social behaviour	This policy in supporting the provision of new community facilities can play a crucial role in combating crime as 'boredom' and 'lack of things to do' are often cited as causes for certain criminal activities. The likelihood of these positive effects occurring is uncertain, as this policy cannot change social behaviour.	+	+	+		
6	To improve population's health and reduce inequalities both geographically and demographically	This policy in supporting the provision of community facilities which may include health care, sporting and leisure opportunities in Hertsmere, is likely to have indirect positive effects on improving health in Hertsmere however, the positive effects are uncertain and secondary in nature.	+	+	+

centres						

Table J.17 - Policy CS18 - Key community facilities

Policy CS18 - Key Community Facilities	Proposals for the provision or dual use of key community facilities, including educational, healthcare and recreational facilities, will be supported, subject to any environmental constraints and other relevant policies. The loss, reduction or displacement of facilities and sites will not be permitted unless it can be demonstrated that they are surplus to the needs of the local community; or are no longer fit for purpose. It should also be demonstrated that there is no reasonable scope for alternative community uses to be provided and that any required, replacement accommodation elsewhere is satisfactory for all of its users, having regard to the provisions of Policy CS20. The conversion or redevelopment of residential properties for healthcare and elderly care will not be considered appropriate unless it can be demonstrated that there are no other suitable sites or buildings within the service provider catchment.
---	---

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term
0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	This policy lends strong support to the provision or dual use of key community facilities, which offers the potential to contribute to providing additional venues for education and training. As such, there are likely to be significant permanent positive effects depending on the successful implementation of this policy.	++	++	++		Depends on the successful implementation of this policy. This policy does not stipulate the type of community facilities in the policy wording (only supporting text). The positive effects may be greater if the specific community facilities are referred to in the policy wording.
2	To ensure ready access to essential services and facilities for all residents	This policy presents a pro-active support for new uses, protection of existing uses where there is no demonstrated surplus, and the conversion, where appropriate, of residential buildings to provide local community facilities. As such, it presents a flexible approach, which should help to secure better availability and accessibility of services to a wider section of the population in Hertsmere. This policy will have permanent positive and significant effects given the flexibility in its wording.	++	++	++		
3	To meet identified housing needs and improve the quality and affordability of housing	The conversion or redevelopment of residential dwellings to provide local community facilities may have negative effects through taking away housing stock. Conversely, the release of surplus and unused sites for potentially housing use is likely to contribute to meeting identified	+/-	+/-	+/-		

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		housing need. The likelihood of positive or negative effects will depend on individual cases, location and appropriate mitigation for the loss of housing is provided.					
4	To reduce poverty and social exclusion and promote equality of opportunities	A pro-active and flexible approach to community facilities provision may have positive effects on this objective as community and leisure facilities can be important social hubs. The likelihood, scale and magnitude of these positive effects will depend on the location of facilities within identified deprived areas. Overall, effects should be positive in the medium and long term.	0	+	+	To monitor the location of proposals coming forward in identified deprived areas through the development control process.	The supporting text should refer to the identified areas of social deprivation in Hertsmere to qualify these positive effects.
5	To reduce and prevent crime, fear of crime and anti social behaviour	This policy in protecting existing and providing new community facilities can play a crucial role in combating crime as 'boredom' and 'lack of things to do' are often cited as causes for certain criminal activities. The likelihood of these positive effects occurring is uncertain, as this policy cannot change social behaviour.	+	+	+	Designing out crime in new development should be referred to in order to maximise the positive effects.	Policy should be clearly linked with Hertsmere Crime, Disorder and Drugs Strategy.
6	To improve population's health and reduce inequalities both geographically and demographically	This policy provides a mechanism for the pro-active provision of additional facilities that may include health care, sporting and leisure opportunities in Hertsmere, which may have indirect positive effects on improving health in Hertsmere however; the positive effects are uncertain and secondary on nature.	+	+	+	To monitor the number, type and location of proposals coming forward through the development control process.	
ENVIRONMENT							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The conversion of existing buildings and in exceptional circumstances, the adaptation or redevelopment of buildings, will have a positive effect on making the most efficient use of previously developed land and existing buildings. The effect is likely to be non-significant, although long term and permanent.	+	+	+	Not required as effect positive.	
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	
9	To protect and enhance landscape character, historic	No obvious effects.	0	0	0	n/a

			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	n/a	
2	To ensure ready access to essential services and facilities for all residents	Mixed-use development is likely to be accommodated in areas of good public accessibility and road capacity, which may result in supporting access to services and facilities depending on the nature of the mixed-use development. Residential use however will be provided in accessibility areas. This policy will result in permanent positive effects linking new development to accessible areas but effects are not significant.	+	+	+	None required as positive.	
3	To meet identified housing needs and improve the quality and affordability of housing	Mixed use development will contribute to meeting housing targets however; mixed use development may compromise maximising housing units in new development which may have medium and longer term negative effects on meeting identified housing need.	+	+/-	+/-		
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effects.	0	0	0	n/a	
5	To reduce and prevent crime, fear of crime and anti social behaviour	No obvious effects.	0	0	0	n/a	Designing out crime prevention measures should be incorporated into any new development to reduce crime and fear of crime.
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0		
ENVIRONMENT							

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The seeking of mixed use development on major development sites in Borehamwood town centre and elsewhere capable of accommodating mixed use is likely to have a positive effect as these development sites are likely to be on previously developed land, although there is no guarantee for this. There is also the potential for negative effects, as it is possible the policy may allow mixed use development on Greenfield sites even though the impact on the environment is to be considered. The effect is therefore dependent on the chosen location of mixed use development.	+/-	+/-	+/-		
8	To reduce contamination and safeguard soil quality and quantity	Development of land should reduce contamination through the requirement for remediation. However there is potential for contamination from the new land use dependent on its nature. It is likely that positive effects will prevail particularly with mitigation measures in place.	+/-	+/-	+/-	Measures to prevent contamination from new land uses. Implementation of a CEMP to reduce the risk of pollution.	Performance against this objective will depend on the effective implementation of Policy CS15 through the requirement of incorporating SUDS into development.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	There is potential for negative effects if mixed-use development is located in areas of sensitive landscape character, but the policy refers to the impact on the environment within and around the development site needing to be considered. Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment) provide further detail on such requirements.	-	-	-		Performance against this objective will depend on the effective implementation of Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment).
10	To maintain and enhance the quality of countryside and landscape	There is potential for negative effects if mixed-use development is located in areas of or adjacent to areas of countryside but the policy refers to the 'impact on the environment within and around the development site needing to be considered. Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment) provide further detail on	-	-	-		Performance against this objective will depend on the effective implementation of Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment).

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		such requirements.					
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Mixed use development should reduce the need for any travel by providing housing and services on one site or close by. Any need to travel could then be able to be met by sustainable transport modes. The positive effects are likely to be permanent but not significant.	+	+	+	Not required as effect positive.	Performance against this objective will depend on the effective implementation of Policy CS23 (Development and accessibility to services and employment) and CS24 (Accessibility and parking).
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	There is potential for negative effects if mixed-use development is located in or in the vicinity of such important assets. The policy refers to the 'impact' on the environment within and around the development site needing to be considered. Policy CS13 (Protection or enhancement of heritage assets) and Policy CS12 (The Green Belt and protection and enhancement of the natural environment) provide further detail on such requirements.	-	-	-		Performance against this objective will depend on the effective implementation of Policy CS12 (The Green Belt and protection and enhancement of the natural environment) and Policy CS 15 (Environmental impact of development).
13	To improve the quality of surface and ground waters	Mixed use development reducing the need to travel should have positive effects on improving surface run off. However during construction of the site there will be potential for water pollution. The negative effects are likely to be temporary. Positive effects are likely to be minor and not significant.	-	+/-	+/-		Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
14	To minimise water consumption	Development of any kind will increase water consumption resulting in potential negative effects as policy wording currently stands. The negative effects are likely to be permanent but not significant..	-	-	-		Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
15	To minimise the risk of flooding taking account of climate change	Development of any kind will increase flood risk, to a greater extent if the mixed use is located with the floodplain. New development will require mitigation sought through the application of CS Policy 15 (Environmental impact of development).	?	?	?		Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
16	To improve local air quality	Mixed use development should reduce the need for any travel by providing housing and services on one site or close by. Any need to travel could be met by sustainable transport modes. The positive effects are permanent but not significant.	+	+	+	Not required as effect positive.	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
17	To reduce greenhouse gas emissions	Mixed use development should reduce the need for any travel by providing housing and services on one site or close by. Any need to travel could be met by sustainable transport modes. The positive effects are permanent but not significant.	+	+	+	Not required as effect positive.	Performance against this objective will depend on the effective implementation of Policy CS 16: Energy and CO ₂ Reductions.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	Performance against this objective will depend on the effective implementation of Policy CS 16: Energy and CO ₂ Reductions.
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	Performance against this objective will depend on the effective implementation of Policy CS 15 (Environmental impact of development).
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Mixed-use developments have the potential for a positive effect on contributing towards a prosperous and stable economy by incorporating employment, community and residential uses close together and contributing towards a stable economy.	+	+	+	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	Borehamwood town centre and elsewhere capable of accommodating mixed use are likely to gain increased population and additional services which should help to improve their viability through increased demand for services and facilities. The effect is likely to be slightly positive, long term and permanent.	+	+	+	Not required as effect positive.	

Table J.19 - CS20 Standard charges and other planning obligations

CS20 Standard charges and other planning obligations	<p>Up until April 2014 (or until the Council has adopted a Community Infrastructure Levy (CIL) charging schedule), provision for on and off-site facilities, services and improvements, for which a need is known to arise from new residential development, in addition to obligations towards Affordable Housing, will be secured through:</p> <ul style="list-style-type: none"> (i) the use of individually negotiated planning obligations and / or any standard charge(s) on the approval of each new home on smaller sites, typically of fewer than 15 units (gross), to be secured through a planning obligation under Section 106 of the Town and Country Planning Act; and (ii) the use of individually negotiated planning obligations entered into by the Council under Section 106 of the Town and Country Planning Act, on sites of 15 or more units (gross). <p>The provision of Affordable Housing, together with on and off-site facilities, training, services and improvements necessitated by new commercial and other development, will be secured through planning conditions and obligations entered into by the Council and developers under Section 106 of the Town and Country Planning Act and related or equivalent legislation.</p> <p>The Council will seek to introduce a CIL charging schedule by April 2014. Following the introduction of a CIL charging schedule, planning obligations under Section 106 of the Town and Country Planning Act will only be sought in relation to individual schemes where such contributions would be necessary to mitigate site-specific impacts and are not for items already covered in a CIL charging schedule.</p>
<p>Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative</p>	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	This policy aims to ensure that developers make financial contributions which could be used to fund educational provision but this will depend, as stipulated in the policy wording, on whether a need is known. Minor positive effects are likely to occur in the medium and longer term but not significant.	0	+	+	None identified. Monitor the nature of fixed charge or planning obligations sought for new development through the development control process.	Currently a Planning Obligations SPD sets out a local standard charge or facilities and infrastructure which are secured through a planning obligation under Section 106 of the Town and Country Planning Act. A CIL charging schedule to be introduced by April 2014 is expected to make the planning obligations system simpler and more predictable and be more flexible in funding infrastructure that supports growth but is located outside of the area where revenue is raised.
2	To ensure ready access to essential services and facilities for all residents	This policy aims to ensure that developers are required to make financial contributions which could be used to fund improvements in accessibility but this will depend, as stipulated in the policy wording, on whether a need is known. Minor positive effects are likely to occur in the medium and longer term but not significant.	0	+	+	None identified. Monitor the nature of fixed charge or planning obligations sought for new development through the development control process.	As above.

3	To meet identified housing needs and improve the quality and affordability of housing	This policy through S106 agreements supports the provision of affordable housing. This obligation is separate to other provisions and is an important financial mechanism to help ensure the delivery of affordable housing.	++	++	++	None required as positive.	
4	To reduce poverty and social exclusion and promote equality of opportunities	Obligations on affordable housing and provision of necessary facilities and improvements may help improve equality of opportunities.	+	+	+	None required.	
5	To reduce and prevent crime, fear of crime and anti social behaviour	Charges may be sought to deliver education and community facilities as well as CCTV and open space improvements, which should have positive effects on the levels of crime and anti-social behaviour and fear of crime.	+	+	+	None required.	
6	To improve population's health and reduce inequalities both geographically and demographically	Charges and planning obligations and future CIL could be used to deliver community health care, sporting and leisure provision, greenways which would contribute to this objective.	+	+	+	None identified. Monitor the nature of fixed charge or planning obligations sought for new development through the development control process.	
ENVIRONMENTAL							
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	No obvious effects.	0	0	0	n/a	
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effects.	0	0	0	n/a	
10	To maintain and enhance the quality of countryside and landscape	Planning obligations can be used for town Centre Improvements, green infrastructure, habitat creation, and therefore may help enhance the quality of townscape. .	+	+	+	n/a	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	Charges and obligations may be used to enhance sustainable transport infrastructure.	+	+	+	Not required as effect positive.	

12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	Improvements to the Watling Chase Community Forest and other green infrastructure improvements specified under the supporting text to the policy are likely to have a slight positive effect on enhancing biodiversity. .	+	+	+	Not required as effect positive.	As above.
13	To improve the quality of surface and ground waters	Provision of facilities and services through charges and obligations maybe include waste water infrastructure and green infrastructure improvements, which will benefit this objective.	+	+	+		
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	
15	To minimise the risk of flooding taking account of climate change	Planning obligations can include the provision of SUDS and flood alleviation measures as part of green infrastructure improvements, which will help reduce the risk of flooding.	+	+	+		
16	To improve local air quality	Provision of facilities and services at appropriate locations should reduce the need for travel. Enhancement to greenways through planning obligations may also support the use of sustainable transport modes, benefitting local air quality.	+	+	+	Not required as effect positive.	
17	To reduce greenhouse gas emissions	Provision of facilities and services at appropriate locations should reduce the need for travel. Enhancement to greenways through planning obligations may also support the use of sustainable transport modes, minimising transport related GHG emissions.	+	+	+	Not required as effect positive.	As above.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	Planning obligations may be sued for delivery of recycling facilities, which will may help encourage recycling of waste.	+	+	+	Not required as effect positive.	

ECONOMIC

20	To provide a prosperous, balanced and stable economy	Charges and planning obligations have the potential for a significant positive effect through the provision of a range of community facilities and infrastructure improvements to support a balanced and stable economy. Effects may strengthen in the medium- long term when a CIL charging schedule is introduced.	+	++	+++	Not required as effect positive.	A CIL charging schedule to be introduced by April 2014 is expected to make the planning obligations system simpler and more predictable and be more flexible in funding infrastructure that supports growth but is located outside of the area where revenue is raised.
21	To sustain and enhance the viability and vitality of town centres	Charges and planning obligations have the potential for a significant positive effect through the provision of a range of community facilities and infrastructure improvements to sustain and enhance the viability and vitality of town centres. The effect is likely to be long term and permanent.	++	++	++	Not required as effect positive.	As above.

Table J.20 - Policy CS21 Securing a high quality and accessible environment

Policy CS21 Securing a high quality and accessible environment	<p>In line with the Planning and Design Guide SPD the Council will require all development to be of high quality design, which ensures the creation of attractive and usable places. Development proposals should take advantage of opportunities to improve the character and quality of an area and conserve the Borough's historic environment. The Council will take account of the cumulative impact of new development, including the impact arising from residential intensification and redevelopment.</p> <p>Development should be planned with the principles of crime prevention and community safety integrated. All new development should be designed to ensure that buildings and land within their curtilage are fully accessible to groups with special mobility requirements. Where practicably possible 100% of new residential units should be built to the Lifetime Homes Standards based on the Joseph Rowntree Foundation standards highlighted in the Council's Planning and Design Guide Supplementary Planning Document. The proportion of wheelchair accessible homes on new residential redevelopments of 15 or more units will be considered on a site by site basis, having regard to current needs in the Borough.</p>
<p>Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative</p>

			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	None required.	
2	To ensure ready access to essential services and facilities for all residents	This policy should help to support improved accessibility to housing for the mobility impaired. The effects are likely to be minor and permanent and not significant.	+	+	+	None required.	

3	To meet identified housing needs and improve the quality and affordability of housing	This policy includes a mechanism to provide homes to meet the needs of those with mobility difficulties. In addition, this policy requires new housing stock to meet the design and quality criteria of the lifetime homes standard, which will ensure that all homes are fully accessible and thus inclusive. In the medium and long term, positive effects are likely to be greater as developers adapt to meeting the lifetime home standards.	+	++	++	None required.	To monitor through the development control process the extent to which new residential units meet the lifetime homes standard and the actual percentage realised.
4	To reduce poverty and social exclusion and promote equality of opportunities	This policy should help ensure that an increased amount of homes meets the needs of certain disadvantaged groups such as the mobility impaired. This is likely to have some positive effects in terms of increasing equality of opportunity and reducing social exclusion. In the medium and long term, positive effects are likely to be greater as developers adapt to meeting the lifetime home standards.	+	++	++	None required.	As above.
5	To reduce and prevent crime, fear of crime and anti social behaviour	The policy requires that development should be planned with the principles of crime prevention and community safety integrated..	++	++	++	None required.	It is recommended that the requirement mentioned in the policy supporting text for all schemes to incorporate 'Secured by Design' principles should be included in the main policy text to clarify and strengthen its message.
6	To improve population's health and reduce inequalities both geographically and demographically	No obvious effects.	0	0	0	None required.	
ENVIRONMENTAL							
7	To make the most efficient use of previously land developed land and existing buildings before Greenfield sites	No obvious effects.	0	0	0	n/a	
8	To reduce contamination and safeguard soil quality and quantity	No obvious effects.	0	0	0	n/a	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The policy refers to the Planning and Design Guide SPD, requiring that all development should be of high quality design and should take advantage of opportunities to improve the character and quality of an area and conserve the Borough's historic environment.	++	++	++	n/a	

10	To maintain and enhance the quality of countryside and landscape	The policy will help to reinforce local distinctiveness and create attractive spaces and townscape.	++	++	++	n/a	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	No obvious effects.	0	0	0	n/a	
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	No obvious effects.	0	0	0	n/a	
13	To improve the quality of surface and ground waters	No obvious effects.	0	0	0	n/a	
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	
15	To minimise the risk of flooding taking account of climate change	No obvious effects.	0	0	0	n/a	
16	To improve local air quality	No obvious effects.	0	0	0	n/a	
17	To reduce greenhouse gas emissions	No obvious effects.	0	0	0	n/a	
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	No obvious effects.	0	0	0	n/a	
21	To sustain and enhance the viability and vitality of town centres	The policy aims to support the creation of attractive and usable places, which may contribute to the area's vitality and viability. .	+	+	+	n/a	

Table J.21 - Policy CS22: Elstree Way Corridor

Policy CS22 Elstree Way Corridor	<p>Within the Elstree Way Corridor the continued development and refurbishment of Employment, Civic and Community uses will be actively encouraged. Residential development on appropriate sites will accepted, in accordance the Elstree Way SPG and any subsequent guidance or agreed masterplan.</p> <p>Any development should have regard to guidance set out in the Elstree Way Corridor Area Action Plan DPD and be brought forward in a coordinated manner. Proposals likely to result in a piecemeal or fragmented redevelopment of the corridor will be refused. Development should also provide active frontages to Elstree Way where possible to promote the identity of the corridor as a civic and commercial gateway to the borough, should build on the accessibility location of the corridor and should ensure an appropriate demarcation of residential and non-residential uses within this part of the town.</p>
---	--

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative								
SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation	
			ST	MT	LT			
SOCIAL								
1	To improve educational achievement, training and opportunities for lifelong learning and employability	The Elstree Way Corridor will actively encourage Employment, Civic and Community uses which could include educational facilities or community training. The retention of the existing businesses and attraction of new ones may provide basis for apprenticeships, which would help young people to gain job-specific skills and achieve nationally recognised qualifications.	+	+	+	None identified.	n/a	
2	To ensure ready access to essential services and facilities for all residents	The Elstree Way Corridor continued development will include aspects of both residential and essential services (there are health facilities in the corridor for example). As part of the redevelopment, public transport and walking and cycling links to the site will be improved, thus improving access to these facilities and having a beneficial effect against this objective.	+	+	++	None identified.	Details of the re-development of the Corridor will be set out in the AAP.	
3	To meet identified housing needs and improve the quality and affordability of housing	The policy allows for residential development on appropriate sites in the Corridor, thus increasing the availability of housing in the area.	+	+	++	None identified.	n/a	
4	To reduce poverty and social exclusion and promote equality of opportunities	The redevelopment of the Elstree Way corridor will allow for increased access to essential facilities such as health facilities through improving transport linkages in the area, and improving services. This will enhance accessibility to services, facilities and job opportunities for those without access to a private car.	+	++	++	The forthcoming Elstree Way AAP should build upon the findings of the Corridor transport study states and the Elstree and Borehamwood Urban Transport Plan to address vehicular and pedestrian traffic difficulties. Public transport, walking and cycling should be encouraged. .	Details of the area regeneration will be set out in the AAP building upon the Corridor's masterplan.	

5	To reduce and prevent crime, fear of crime and anti social behaviour	The promotion of active frontages and general improvement of the quality of the built environment and public realm in Elstree Way will allow for the fear of crime to be reduced through providing an attractive and safe environment. Retention of the existing businesses and attraction of new ones can also help provide local employment, preventing anti-social behaviour.	+	+	++	The corridor should be developed in line with Secured by Design principles http://www.securedbydesign.com/	Effects against this objective will depend on the successful implementation of Policy CS21 which requires that development integrates the principles of crime prevention and community safety.
6	To improve population's health and reduce inequalities both geographically and demographically	The Elstree Way corridor includes health facilities. Redevelopment of the corridor and an improvement of public transport and walking and cycling links will improve access to health facilities and encourage more active life styles, benefitting public health. The redevelopment will also improve the quality of public realm, which is currently poor. This may have positive effects on the quality of life of local residents and thus on their wellbeing and mental health.	+	++	++	None identified.	Details of the area regeneration will be set out in the AAP building upon the Corridor's masterplan.
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	The Elstree Way corridor is utilising previously developed land rather than developing on greenfield land and thus has a beneficial effect against this objective.	+++	+++	+++	None identified.	n/a
8	To reduce contamination and safeguard soil quality and quantity	If the sites within the corridor identified for development are contaminated, remediation would need to be undertaken prior to their development (Policy CS15). This would help reduce contamination in the Borough. On the other hand, any construction activities have the potential to introduce pollution to soil, although this risk can be mitigated.	+/-	+/-	+/-	Effects may be mitigated through the use of SUDS and minimising emissions to soil – Policy CS15 (Environmental impact of development). Ensure that best practice pollution control measures are used during construction.	The performance of this policy is dependent on the successful implementation of Policy CS15.
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	The policy seeks a coordinated approach for development of the corridor and thus will avoid "piecemeal or fragmented" development; this will have a beneficial effect on improving the character of the area and surrounding townscape.	++	++	++	None identified.	n/a
10	To maintain and enhance the quality of countryside and landscape	The Elstree Way corridor is in a developed location and thus there are no obvious effects.	0	0	0	None identified.	n/a

11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	In line with the Elstree Way SPG, the redevelopment of the area will encourage sustainable modes of transport such as public transport and walking and cycling initiatives, including improved pedestrian links to the town centre. This will be crucial for the sustainable development of the site, and will lower in required funds to deliver the needed improvements for both the pedestrian and vehicular environment. The policy does not currently state this explicitly and thus should be updated to include this reference. Developing the site as a mixed use site with a range of facilities will also reduce the need to travel.	++	++	++	Include reference to reducing dependence on a private car and encouraging sustainable modes of transport to the corridor. The forthcoming Elstree Way AAP should build upon the findings of the Corridor transport study states and the Elstree and Borehamwood Urban Transport Plan to address vehicular and pedestrian traffic difficulties.	The performance of this policy is dependent on the successful implementation of Policy CS25 (Promoting alternatives to the car).
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	No obvious effects on the biodiversity are likely as this is currently developed area for employment and other uses. Improvements to the built environment and public realm may create opportunities for biodiversity enhancement through design, including the use of SUDS, and landscaping.	+	+	+	Biodiversity and green infrastructure enhancement measures should be actively encouraged in the future AAP. The potential for local biodiversity should be considered before and during any construction activities.	The performance of this policy is dependent on the successful implementation of Policy CS12 (The Green Belt and Protection and enhancement of the natural environment) and the degree to which biodiversity protection is addressed through the forthcoming AAP.
13	To improve the quality of surface and ground waters	Any construction activity has the potential to affect surface and groundwater through pollution incidents, and this should be managed appropriately. The requirement for SUDS in Policy CS15 may help improve water quality.	-/+	-/+	-/+	Effects may be mitigated through the use of SUDS and minimising emissions to water and soil – Policy CS15 (Environmental impact of development). Best environmental practice such as silt traps should be used during construction to minimise the potential for pollution incidents to surface and groundwaters.	The performance of this policy is dependent on the successful implementation of Policy CS15.
14	To minimise water consumption	There are no obvious effects from this policy on minimising water consumption.	0	0	0	None identified.	n/a
15	To minimise the risk of flooding taking account of climate change	By developing previously developed land the risk of flooding is minimised when compared to developing on greenfield land.	+	+	+	The use of SUDS will further help reduce flood risk.	The performance of this policy is dependent on the successful implementation of Policy CS15.

16	To improve local air quality	By encouraging sustainable modes of transport to the site and improved pedestrian links to the town centre (in line with the Elstree Way SPG) there is likely to be a reduction in car use to and within the area and thus an improvement in air quality.	0	+	+	See objective 11.	The performance of this policy is dependent on the successful implementation of Policy CS25 (Promoting alternatives to the car).
17	To reduce greenhouse gas emissions	By developing the site as mixed use with a mixture of residential, employment, civic and community facilities with improved pedestrian links to the town centre, the need to travel will be reduced thus having a beneficial effect on GHG emissions. Development will also be required to progressively achieved zero carbon standards (Policy CS16).	+	+	+	Materials selected for any new construction should have low embodied carbon and assessed in terms of their sustainability.	The performance of this policy is dependent on the successful implementation of Policies CS16 (Energy and CO ₂) and CS25 (Promoting alternatives to the car).
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	New development will generate additional energy demand. However, in line with Policy CS16, all new development will have to be energy efficient and thus by providing new development in the area there is likely to be a beneficial effect against this objective. The Corridor Local Development Order may help encourage the installation of solar panels or other renewable energy technologies. Effects are likely to improve over the Plan period.	-	-/+	+	None identified.	The performance of this policy is dependent on the successful implementation of Policy CS16 (Energy and CO ₂).
19	To reduce the generation of waste and encourage re-use and recycling of waste	New development, however sustainable, will generate waste during construction and operation; this should be managed appropriately.	-	-	-	A site waste management plan should be developed for use during construction.	Successful implementation of Core Policy 15 should help minimise the effects of new development.
20	To provide a prosperous, balanced and stable economy	The development of the mixed use Elstree Way Corridor including employment will aim to provide a prosperous, balanced and stable economy with additional transport infrastructure.	++	+++	+++	None identified.	n/a

21	To sustain and enhance the viability and vitality of town centres	The Elstree Way Corridor is within the town of Borehamwood, the main settlement of the Borough. The policy aims to promote the identity of the corridor as a civic and commercial gateway, improve its current image and pedestrian links with the main shopping part of the town centre and thus provide identity and enhance the vitality of the town centre, having a beneficial effect against this objective. It will also provide diversity by being mixed use development.	++	+++	+++	None identified.	n/a
----	---	---	----	-----	-----	------------------	-----

Table J.22 – Policies CS23, CS24 and CS25: Transport and accessibility

<p>Transport and Parking (combined policies)</p> <p>CS23 Development and accessibility to services and employment</p> <p>CS24 Accessibility and parking</p> <p>CS25 Promoting alternatives to the car</p>	<p>CS23 Development and accessibility to services and employment The Council will work towards Hertfordshire County Council's vision of providing a safe, efficient and affordable transport system that allows access for all to everyday facilities.</p> <p>To obtain the best use of the existing highway network, major trip generating development should be focused principally on Transport Development Areas, Transport Corridors and town centres, as indicated on the Key Map. Major non-residential developments over 2,500 sq m or schemes of 25 residential units will only be permitted where:</p> <ul style="list-style-type: none"> i) it does not conflict with the Transport Objectives of the Hertfordshire Local Transport Plan (April 2011) and associated Accessibility Strategy; ii) it is accompanied by a suitable Travel Plan (for developments over 2,500 sq m or 80 residential units), prepared in accordance with guidance set out in the Parking Supplementary Planning Document; iii) it is in accordance with Hertfordshire County Council guidance and relevant Local Plan / Development Plan Document policies relating to the operation of the Highways network and the achievement of vehicular, pedestrian and equestrian safety; and <p>it contributes, where required, to the provision or funding of new infrastructure or improved public transport services and non-motorised routes.</p> <p>CS24 Accessibility and parking In order to facilitate fair and convenient access to local services, the quantity of off-street parking for all modes of transport, to be provided at new developments, will be based on an assessment of:</p> <ul style="list-style-type: none"> i) a site's location; ii) local car ownership; iii) the proposed land use (having regard to Table 14 for residential development); iv) housing tenure; v) the potential for shared parking, over various times of the day and week, with other uses; vi) local on-street parking conditions and controls, including those likely to be available within the new development; vii) highway and pedestrian safety considerations including whether roads have been designed to an adoptable standard; viii) incentives to reduce dependency on the car and the provisions of any Travel Plan submitted; ix) the Accessibility Zones for the Borough; together with the extent of compliance with requirements set out in the Parking Supplementary Planning Document; and x) the extent to which permeable and semi-permeable surfaces are incorporated into the area of off-street parking to be provided. <p>CS25 Promoting alternatives to the car The Council will support a wide range of measures to provide safer and more reliable alternatives to the car for accessing new development and existing</p>
---	--

	<p>development and other destinations across the Borough including:</p> <ul style="list-style-type: none"> i) improved public transport facilities; ii) additional public transport routes and stops; iii) enhanced and new non-motorised links within and between urban and rural areas, along or additional to the existing rights of way and highways network, which increase walking, cycling or riding opportunities; and iv) the safeguarding of proposed non-motorised routes, where necessary, to preclude development occurring which would prevent their future implementation. <p>New developments will be assessed in terms of their accessibility by a range of transport modes and where appropriate, measures to promote alternatives to the car will need to be provided as part of a proposed scheme, having regard to the requirements of the Parking Supplementary Planning Document.</p>
<p>Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term 0 – no effect; +++ strongly positive; ++ moderately positive; + slightly positive; --- strongly negative; -- moderately negative; - slightly negative</p>	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	Improved accessibility for all by public transport and non-motorised forms of transport to facilities may have some indirect positive effects against this objective, as it may enable or improve access to education and training. .	+	+	+	n/a	
2	To ensure ready access to essential services and facilities for all residents	Aligning new development with the objectives of the County LTP 2011, requiring contributions towards public and non-motorised modes infrastructure and services improvements, the creation of accessibility zones, the focus of major trip generating development in areas of high public transport accessibility and other measures in these policies are likely to have permanent positive effects. Effects are likely to become more prominent in the longer term as more transport measures are implemented.	++	++	+++	Not required as positive.	The effects against this objective will depend on the successful implementation of the County LTP3 and its daughter documents.
3	To meet identified housing needs and improve the quality and affordability of housing	No obvious effects.	0	0	0		
4	To reduce poverty and social exclusion and promote equality of opportunities	Focusing development in the most accessible locations across the Borough should help to improve opportunities for social engagement and promote a more equitable pattern of development and investment resulting in permanent positive effects. Policy CS23 acknowledges that transport system needs to be affordable.	+	+	+	Not required as positive.	The County LTP3 identifies vulnerable social groups which needs have to be considered in transport planning. The effects against this objective will depend on the successful implementation of LTP3

5	To reduce and prevent crime, fear of crime and anti social behaviour	Improvements to public transport facilities, addressing safety considerations in transport network should help prevent crime and reduce fear of crime.	+	+	+	n/a	
6	To improve population's health and reduce inequalities both geographically and demographically	These policies support a range of measures to providing alternatives to the car, including the promotion of walking and cycling. This in turn will help promote more active life styles with benefits for public health.	+	+	+	Not required as positive.	The effects against this objective will depend on the successful implementation of the Walking and Cycling Strategies forming part of the County LTP3.
ENVIRONMENTAL							
7	To make the most efficient use of previously developed land and existing buildings before Greenfield sites	No obvious effects.	0	0	0	n/a	
8	To reduce contamination and safeguard soil quality and quantity	Reducing reliance on the private car and improving non motorised networks and facilities as well as promoting permeable and semi-permeable surfaces may help reduce the amount of polluted runoff and thus benefit soil quality. .	+	+	+	n/a	
9	To protect and enhance landscape character, historic buildings, archaeological sites and cultural features of importance to the community	No obvious effects.	0	0	0	n/a	
10	To maintain and enhance the quality of countryside and landscape	No obvious effects.	0	0	0	n/a	
11	To reduce dependence on private car and achieve modal shift to more sustainable transport modes	The County's LTP3 support for public transport and sustainable modes, travel plans, location of development and the seeking contributions to public transport infrastructure will promote alternatives to the car resulting in strong positive effects on reducing dependence on the private car. Effects are likely to become more prominent in the longer term as more measures are implemented and a higher percentage of public uptakes sustainable transport modes.	++	++	+++	Not required as effect positive.	The effects against this objective will depend on the successful implementation of the County LTP3 and it daughter documents, in particular, the Walking, Cycling and Bus Strategies.
12	To protect and enhance wildlife and habitats which are important on an international, national and local scale	No obvious effects.	0	0	0	n/a	

13	To improve the quality of surface and ground waters	Reducing reliance on the private car and improving non motorised networks and facilities as well as promoting permeable and semi-permeable surfaces may help reduce the amount of polluted runoff and thus benefit soil quality. .	+	+	+	n/a	
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	As part of work travel plans some company's may wish to provide shower facilities to encourage staff to cycle. Reference should be made to BREEAM standards to ensure water use is minimal
15	To minimise the risk of flooding taking account of climate change	Identifying the need for permeable or semi-permeable surfaces and promoting sustainable transport as opposite to increasing road network may help to minimise an increase in localised flooding. .	+	+	+	n/a	
16	To improve local air quality	Reduction in private car use will have a positive effect on improving air quality. These positive effects are likely to be permanent, possibly increasing in the longer term when a behavioural step change may take place.	+	+	++	Not required as effect positive.	The extent of the positive effects will be dependant the measures in LTP3..
17	To reduce greenhouse gas emissions	Reduction in private car use will have a positive effect on reducing greenhouse gas emissions. These positive effects are likely to be permanent and not significant. Effects are likely to become more prominent in the longer term as more measures are implemented and a higher percentage of public uptakes sustainable transport modes.	+	+	++	Not required as effect positive.	The effects against this objective will depend on the successful implementation of the County LTP3 and it daughter documents, in particular, the Walking, Cycling and Bus Strategies.
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	Promoting a switch to sustainable transport modes may help to reduce energy intensity of transport sector.	+	+	+	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	Good accessibility and an efficient transport system are the backbone of the local economy and its steady functioning. .	++	++	++	n/a	
21	To sustain and enhance the viability and vitality of town centres	The promotion of alternatives to the car is likely to have an indirect positive effect on the viability and vitality of town centres by making town centres less car dominant and more accessible to a wider cross-section of the population. Effects are likely to be long term, although non-significant.	+	+	+	Not required as effect positive.	

Table J.23 - Policies 26 – 29: Town centre policies

<p>Policy 26 – Town Centre Strategy</p> <p>Policy 27– Strengthening Town Centres</p> <p>Policy 28 – Retail and commercial development in Shenley</p> <p>Policy 29 – Safe and attractive evening economy</p> <p>Town Centre Policies (combined assessment under ‘Town Centres and Shopping’)</p>	<p>Policy 26 – Town Centre Strategy Development within the designated town, district or neighborhood centre's of Borehamwood, Potters Bar, Bushey and Radlett will be permitted provided that it maintains their primary retail function and wider role as a focus for business, leisure, cultural and other appropriate town centre uses (as defined within PPS4). Retail activity elsewhere should be focused within local centre's and parades, which will be expected to retain a core of local shopping facilities and accommodate any new retail development, commensurate to their position within the town, district and neighborhood centre hierarchy. Proposals to create in excess of 2,500 sq m of new retail floorspace that is outside of an existing town centre will be subject to the sequential test.</p> <p>Proposals to create in excess of 2,500 sq m of new retail floorspace will be subject to the [significant adverse] impact assessment to enable the impact on existing shopping centre's to be considered.</p> <p>Policy 27 – Strengthening Town Centres The retail function and vitality of designated centres will be reinforced through the designation of primary and secondary shopping frontages in Borehamwood, Potters Bar, Bushey and Radlett. There will be a focus on (A1) retail uses within the primary frontages and scope for a wider range of activities in secondary frontages, with an emphasis on a mix of (A1) retail, (A2) financial and professional services and (A3) dining-in establishments. An appropriate proportion of other uses will also be permitted in secondary frontages, including (A4) pubs and bars and (A5) take away uses, together with other appropriate arts, leisure and entertainment uses. Around the periphery of both secondary frontages and local parades, the Council will identify where any opportunities exist for residential accommodation to replace long-term vacant commercial units.</p> <p>Details of frontages and uses will be set out in the Site Allocations and Development Management DPD along with any planned measures for the Council to use compulsory purchase and other powers to address the long term neglect and abandonment of vacant commercial and other property within town centres. Proposals for rural diversification will be supported where they do not conflict with other policies although to protect the role of town centre's, further retail development at Battlers Green Farm or further afield at the Willows Farm, will not be sought.</p> <p>Policy 28 – Retail and commercial development in Shenley Small scale retail and commercial development in Shenley should be restricted to suitable sites within existing commercial areas. Locations will be identified in the Site Allocations and Development Management DPD, based on those defined in the Shenley Parish Plan:</p> <ul style="list-style-type: none"> • along London Road in the south east of the village; and • at Andrew Close and the nearby junction between London Road and Porters Park Drive (excluding the reserve school site). <p>Retail and commercial development in identified locations in Shenley should be of a size and scale which primarily serves the local community rather than drawing in large numbers of visitors from further afield.</p> <p>Policy 29 – Safe and attractive evening economy The Council wishes to promote a range of uses in town centre's that cater for the whole community, creating a balanced evening economy including entertainment and late night retailing as well as the provision of a range of eating and drinking establishments. The quantity, type and location of A3, A4, A5 and other evening or late night uses will be controlled, having regard to other Local Plan and Development Plan Document policies, together with the aims and objectives of the Hertsmere Crime and Disorder Reduction Partnership Plan, including the need to reduce anti-social behavior, crime and the fear of crime.</p> <p>Where new A3, A4 and A5 uses are permitted, financial contributions will be sought for related town centre improvements including additional CCTV, improved lighting and improved signage for CCTV and Alcohol Free Zones. In relation to those areas where concentrations of drinking establishments, night clubs or other evening or late night uses have caused existing anti-social problems, there will be a presumption against further consents for such uses.</p>
--	---

Scale of Effect (SE): ST – Short Term, MT – Medium Term, LT – Long Term

		ST	MT	LT		

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
SOCIAL							
1	To improve educational achievement, training and opportunities for lifelong learning and employability	No obvious effects.	0	0	0	None required.	
2	To ensure ready access to essential services and facilities for all residents	The town centre policies in the Revised CS provide a balanced town, district or neighbourhood centre strategy allowing appropriate size and scale retail and commercial units in the main towns, districts and neighbourhood centres of Borehamwood, Potters Bar, Bushey and Radlett. As such, a balanced town centre strategy will ensure ready access to facilities and services is provided. The focus for larger scale development and night time economy in the main centres of Borehamwood and Potter Bar and allowing development in Shenley Retail Park should help to concentrate facilities and services in the most accessible locations. However, there the health check study undertaken shows that there is unlikely to be a need for significant new retail space, the scale of positive effects are unlikely to be significant.	+	+	+	None required.	
3	To meet identified housing needs and improve the quality and affordability of housing	Policy CS24 introduces a requirement for the Council to identify where any opportunities exist for residential accommodation to replace long-term vacant commercial units. This is likely to help meet housing needs and improve the affordability of housing.	+	+	+	None required.	
4	To reduce poverty and social exclusion and promote equality of opportunities	No obvious effect.	0	0	0	None required.	
5	To reduce and prevent crime, fear of crime and anti social behaviour	The town centre policies through providing a safe and attractive environment and in not permitting further consents in areas where concentrations of drinking establishments and night-clubs cause existing problems should contribute to reducing crime and fear of crime. Policy CS29 clearly states the need to reduce anti-social behaviour, crime and the fear of	++	++	++	None required.

			ST	MT	LT		
		considered appropriately.					
13	To improve the quality of surface and ground waters	Policy CS26 requirement for impact assessment of any proposals in excess of 2,500 sq m of new retail floorspace will contribute to addressing this objective through ensuring that these topics are considered appropriately.	+	+	+	n/a	
14	To minimise water consumption	No obvious effects.	0	0	0	n/a	
15	To minimise the risk of flooding taking account of climate change	Policy CS26 requirement for impact assessment of any proposals in excess of 2,500 sq m of new retail floorspace will contribute to addressing this objective through ensuring that these topics are considered appropriately.	+	+	+	n/a	
16	To improve local air quality	Provision of good retail and leisure facilities should reduce the need to travel to other settlements for these services which should have a permanent positive effect on improving air quality.	+	+	+	None required.	
17	To reduce greenhouse gas emissions	Provision of good retail and leisure facilities should reduce the need to travel to other settlements for these services which should have permanent positive effect on reducing greenhouse gas emissions from transport.	+	+	+	None required.	
18	To minimise the need for energy, increase energy efficiency, and to increase the use of renewable energy	No obvious effects.	0	0	0	n/a	
19	To reduce the generation of waste and encourage re-use and recycling of waste	No obvious effects.	0	0	0	n/a	
ECONOMIC							
20	To provide a prosperous, balanced and stable economy	The identification of primary and secondary shopping frontages will have a significant positive effect on supporting the wider role of town centres and contributing towards a balanced and stable economy. The effect is likely to be long term and significant.	++	++	++	Not required as effect positive.	
21	To sustain and enhance the viability and vitality of town centres	The policy seeks to strongly support the development of diverse town centres with strong retail cores enveloped in a broader range of uses in secondary frontages.	++	++	++	Not required as effect positive.	

SA Objectives		Description of Effect	Duration of Effect			Description of Mitigation	Comments / Explanation
			ST	MT	LT		
		This is the model recognised as delivering vital and viable town centres in the most effective manner. The ability to control the location of (A4) pubs and bars and (A5) take away uses will enable better control of the night time economy, with a secondary effect on enhancing the viability and vitality of town centres. Also the use by the Council of compulsory purchase order and other powers to address the long term neglect and abandonment of vacant and other property within town centres will provide further opportunities to enhance the viability and vitality of town centres. The effect is likely to be long term and significant.
